Realistic processing loss weights can range from 10% to 50% from intake weight. This is a primary reason we charge on the out-weight of your fiber. These losses are a combination of debris, vegetation, sand, and secondary fiber. We document the incoming weight as verification of receipt and offer you options on any surplus. All unprocessed surplus is included in the out-weight and is desirable by artisans and crafters as roving, batting, felts, and bumps.
