GOLD SEARCHERS SOUTHERN NEVADA

MEETING MINUTES

July 2nd, 2008

Welcome to the Highgrader Newsletter, The Meeting began with the pledge of Allegiance and discussed about the sponsored Outing We have every Month. The club has decided to NOT bring food and drinks. Here is the reasoning why: For the June Outing, several members signed up. More than \$20.00 in club funds were spent and the food and drinks were prepared and taken out to the claim. No one showed up, so most of the prepared meal was wasted. The July meeting decided that in the future there will NOT be food and Drinks provided by the club. Members attending future Outings need to bring their own food and drinks. Wendy Scarborough presented core samples for show and provided information about the Bull Frog Mine. The club would like to Thank Wendy for being our Speaker. June 4th, 2008.

Opened meeting with the Pledge of Allegiance. A miss Jill Lufrano is doing a story about "Recreational Mining in Nevada" and wanted to have some input for her story (E-mail her @ jlufrano@rgj.com). Adam Miller brought in some Turquoise to show. We are still getting Applications from OLD Website www.goldsearcher.com, (which is NOT the Official Website). Our Official Website is at www.goldsearchers.info. We are at a total of 261 Members. We are having a Outing for June 21st, Morris plans on having cold cut sandwiches and drinks. The signs are ready to be put on the Back road Trail and you will notice them because they are yellow background with Black lettering. Morris also put signs on the Main road to help people find the Outing Area.

SOUTHWESTERN

I was watching a show on the "Science channel" called "stings, fangs and spines 2". This lead me to do more research on animals and insects that are very VENOMOUS in the southwestern states (IE: California, Nevada, Utah, Arizona, New Mexico, Western Texas, Western Oklahoma" quoted from Wikipedia", plus I also want to know a little more. There are Scorpions, Snakes, Lizards, and Spiders that live, out at our claims and here are a couple of examples; Bark Scorpion, Black Widow, Brown (Recluse) Spider, Gila monster, Coral Snake, Western Diamondback Rattlesnake, Mojave Rattlesnake, and Sidewinder. These animals need to be treated with respect, especially since we are entering into their domain! I would like to start off with the scorpion (The Bark Scorpion) in which, will hide under and on top of rocks when you go prospecting (especially in the summer months because they are coldblooded). Scorpions have six legs and have a tail and a set of pinchers to grasp and hold on. The scorpion is a creature that hunts mostly at night because things are lively at that time. This scorpion will be hunting at night and when it sees its prey it will grab the prey with its pinchers and use its tail to stick its prey with the stinger that it is equipped with (a neurotoxin – will affect a person's nervous system). The one scorpion to watch out for is the Bark Scorpion because of its dangerous venom. "The venom of the bark scorpion may produce severe pain (but rarely swelling) at the site of the sting, numbness, frothing at the mouth, difficulties in breathing (including respitory paralysis), muscle twitching, and convulsions. Death is rare, especially in more recent times. Antivenin is available for severe cases. Certain people, however, may be allergic to the venom and can experience life-threatening side effects when stung (as occurs with bee stings). No cases of anaphylaxis have been reported in Arizona. Additional information can be found in Venomous Animals of Arizona by Bob Smith" quoted from The University of Arizona, Cooperative Extension, College of Agriculture and Life Sciences. Don't quote me on this but most of these animals should leave you alone while doing your prospecting, but there are those few who wonder in where you are. As for an example, I was on the claim digging into the side of a hill when I caved in my hole, where I was working and so I started shoveling that dirt into my drywasher. It only took a couple of scoops to get the dirt in the drywasher but I had disturbed some rocks nearby that had two to three baby scorpions underneath it and they did not crawl towards me, they took off in the other direction as I was walking off the other way from them. I came back after a half hour and there was no sign of them and so I resumed where I left off. I have to admit one thing, it was my first time seeing a scorpion and it is a great opportunity to look at a creature like that but it gave me the fight or flight experience. Snakessssssss, doesn't that just put a chill down your spine. Knowing that they feel slimy or that they have NO legs and crawl on the ground. Ah, it just makes you feel scared. Well, that is not the case other than they have no legs and they crawl where they have to go. Pretty much snakes want to be left alone and don't like to be visited by people. Snakes eat lizards, crickets, frogs (if water is around), mice, rats, ground squirrels, rabbits, and birds but they wait for the prey to come in striking distance in order to get its meal. The only bad part is that we are treading through their habitat and we have to keep an eye out walking in the desert. During summer months, people have carried snake shot with them in order to keep snakes away from them, because if you are a metal detecting and you end up finding a lot of shells you now know a possible cause for the brass or shells you have come across. Final word, make sure to do your homework or research when heading out in the desert before heading out. It is best to take precautions when out in the desert because of dangerous animals or accidents. Make sure to take a friend, cell phone or gps calling device, and some medical supplies, band-aids, Neosporin, aspirin (your choice), a walking stick, snake bite kit, etc... (these are Some of the things to keep in mind when taking a trip in the desert. If you would like a little more information about snakes and scorpions be sure to visit http://goldsearchers.info/Links.html, This will help you see what kinds of animals are out there in the desert. By Nicolas Johnson,

Gold Searchers of Southern Nevada.

Morris's Recipe Outing Corner.

January 19th, 2008 Barbeque Pork/Beef and Bush • Beans

- 3#'s pork / beef
- 1 Onion
- 1 Bell Pepper
- 4-8 Oz. can Tomato Sauce

- b ½ bottle Katsup (14 Oz.)
- 3 Teaspoon French's Hot Sauce (OPTIONAL)
- 2 Tbls. Worchestershire Sauce
- 3Tbls. Brown Sugar
- 2 Tomato sauce cans of water
- Salt & Peper to Taste!
- Cook meat in oven or Crockpot until it falls

- apart.
- Cut up and add to other ingrededients, cook until Thick
 Triple recipe for Outing
- 2 Packages of buns—16 per package
- 9#'s pork roast
- 2 Large tomato sauce
- 2 Small tomato sauce

- 1 Bottle Katsup
- 1 Onion
- 2 Bell Peppers
- 4 Large cans of Bush Beans (1 Left over)
- 24 bottles of water
- Fed 25 people

Talk about Some good Eats!!

Major Mines of Nevada 2006

The Nevada Bureau of Mines and Geology Special Publication P-18 reported the following statistics for 2006. An all-time record value of all mined commodities was reached. The total value was \$4.9 billion, a\$1.2 billion increase over 2005. Gold contributed about \$3.8 billion, based on an average price of \$603 per troy ounce. Nevada led the nation in the production of gold, barite and lithium as it has for the several years. Gold produced in Nevada represented 81% of the U. S. total.

Underground operations account for 24% of the gold produced in Nevada. The gold reserves in Nevada are estimated to be able to maintain the present level of operations for about 13 years. This is a somewhat moving target with ongoing exploration and research to improve production operations.

Gold is only one part of the mining industry in Nevada. According to the Nevada Department of Employment, Training, and Rehabilitation, the Nevada mining industry employed over 11,000 employees in 2006. The average wage during this time was \$69,387. It is estimated that an additional 52,000 jobs were required to support the mining activity in the state.

Special Publication P-18 breaks the state into seven sections for reporting purposes. The major mines reporting in 2006 in each section are listed detailing the minerals they produce with mine operators, owners and employees. Shown here is a brief summary of each section showing only the number of mines and mineral production.

Where In Nevada Is It?

Oil is a popular topic these days. Do you know where the major oil fields are located in Nevada? There are six oil fields in Nevada. The most frequently talked about oil field in Nevada is located in Railroad Valley in northeast Nye County. Deadman Creek oil field is located in Elko County. Blackburn, North willow Creek, Three Bar and Tomera Ranch Fields are located in Eureka County.

According to The State of Nevada Division of Minerals in 2006, approximately 426,000 barrels of oil were produced from oil fields in Nye and Eureka Counties.

Geothermal energy is another hot topic today (no pun intended). Nevada has sixteen operating geothermal plants. Beowawe is located in Lander County. Chucrhill County is home to Bradys Hot Springs, Desert Peak 1 and 2, Soda Lake No. 1 and No. 2, and Stillwater Plants. The Dixie Valley Plant is located in Esmeralda County. Washoe County has Empire, Steamboat I, IA, II, and III, Galena and Steamboat Hills. Wabuska is located in Lyon County.

Geothermal plants provided 1.3 million megawatt hours of electricity in 2006. According to The Division of Minerals, that is enough power to supply 80,000 homes. Geothermal heat is also used in Elko County Schools and homes in Lincoln and Washoe County.
