

Dur-X-Line ® Liner Materials

Durex Products Inc. liner material is available in standard sheet sizes of 4' X 8' and 4' X 10' or made to size. Liners can be ordered with no backing or expanded metal.

Urethane coated bolts are available for ½" and thicker sheets. The bolts are tapered to make a snug fit into the counter bored holes. The snug fit allows the bolts to be tightened from the back without spinning.

A universal counter bore tool is designed with a movable stop so it can be used for more than 1 sheet thickness.
