

Additional Notes to aid identification

The source of most *se-tenant pairs* can be identified simply by looking at the perforations.

For example ALL horizontal coil pairs have cut perforations at the top *and* bottom as illustrated on page D - 1.

Furthermore ALL horizontal pairs from Machine books have cut perforations at the left and right and ALL vertical pairs from counter books have cut perforations at the top and bottom.

ALL pairs from Prestige books, whether vertical or horizontal, have torn perforations as can be seen from the scan at the bottom right on the opposite page, with the exception of those pairs from the Sterling 'Stamps for Cooks' book and the decimal £1 Wedgwood book which have cut perfs at the top, bottom and right side.

Other details to assist identification are included in the following pages.
