

# Considering Learning Styles

- This presentation is meant to introduce, explore, and apply current research on Learning Styles, including recent controversies amongst proponents and critiques of Learning Styles.

Do we really know Learning Styles?

What does the research say?

What about motivation?

Considerations and applications.

**LEARNING STYLES:  
AN INDUSTRY OF PERSPECTIVES**

# What are Learning Styles?

- **Learning styles** refer to the concept that individuals differ in regard to what mode of instruction or study is most effective for different individuals.
- In the comprehensive literature review from the **Learning & Skills Research Center**, the authors found more than **71 models of “Learning Styles.”**
- From these 71 independent models, they came up with **13 major models**, all of which purport to explain specific learning styles.

# Research Conflicts

- “Learning Styles: Concepts and Evidence” (2009)
  - Claimed to find that **children and adults will frequently cite a learning preference**
  - **NO evidence for the specific causal claims** made about learning styles and their effect on learning
  - Focused on studies involving students who were **matched into groups using their defined LS**

# THE MODELS

Learning styles and preferences are largely **constitutionally based** including the four modalities: VAKT<sup>2</sup>.

**Dunn and Dunn<sup>3</sup>**  
**Gregorc**

Bartlett  
Betts  
Gordon  
Marks  
Paivio  
Richardson  
Sheehan  
Torrance

Learning styles reflect deep-seated features of the **cognitive structure**, including 'patterns of ability'.

**Ridina**

Broverman  
Cooper  
Gardner *et al.*  
Guilford  
Holzman and Klein Hudson  
Hunt  
Kagan  
Kogan  
Messick  
Pettigrew  
Witkin

Learning styles are one component of a relatively **stable personality type**.

**Apter**  
**Jackson**  
**Myers-Briggs**

Epstein and Meier  
Harrison-Branson  
Miller

Learning styles are **flexibly stable learning preferences**.

**Allinson and Hayes**  
**Herrmann**  
**Honey and Mumford**  
**Kolb**

Felder and Silverman  
Hermanussen, Wierstra,  
de Jong and Thijssen  
Kaufmann  
Kirton  
McCarthy

Move on from learning styles to **learning approaches, strategies, orientations and conceptions of learning**.

**Entwistle**  
**Sternberg**  
**Vermunt**

Biggs  
Conti and Kolody  
Grasha-Riechmann Hill  
Marton and Säljö  
McKenney and Keen  
Pask  
Pintrich, Smith, Garcia and McEachie  
Schmeck  
Weinstein,  
Zimmerman and Palmer  
Whetton and Cameron

See Handout 1

# Dunn and Dunn: Ingrained Learning Styles

## *1.Environmental*

- ❑ Includes lighting, sound, temperature, and seating arrangement

## *2.Emotional*

- ❑ Motivation, persistence, responsibility, and structure.
- ❑ For instance, multi-tasking vs linear work progression (one project at a time)

# Dunn and Dunn: Ingrained Learning Styles

## *3. Sociological* (How one learns in relation to others)

- ❑ Considers whether one works alone, with peers, or with an authoritative adult

## *4. Physiological*

- ❑ Encompasses questions of perceptual (auditory, visual, tactile, and kinesthetic), time-of-day, intake (food and drink), and mobility.

## *5. Psychological* (types of psychological processing)

- ❑ hemispheric, impulsive or reflective, and global versus analytic.

# Flexible Learning Styles Model: Vermunt's Learning Approaches

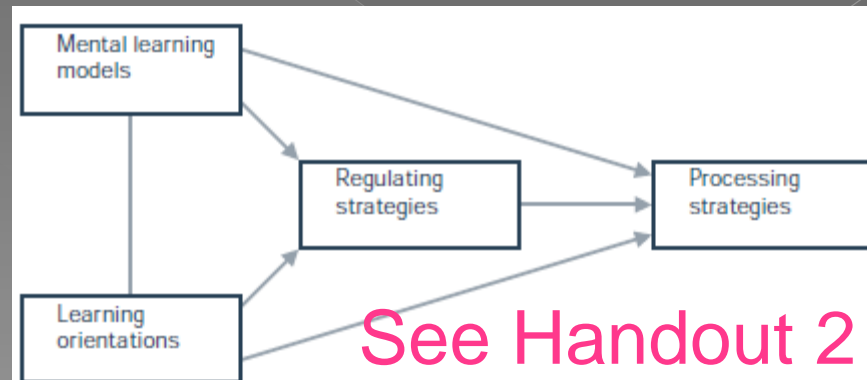

# Vermunt: Equating Learning Style with Learning Approach

- *'Learning style is not conceived of as an unchangeable personality attribute, but as the result of the temporal interplay between personal and contextual influences' ~ Jan Vermunt*
- Four “learning styles”:
  - > meaning-directed,
  - > application-directed,
  - > reproduction-directed,
  - > and undirected.

# Vermunt, continued

Each style is defined by five features:

- > the way in which students cognitively process learning contents
  - *what students do*
- > the learning orientations of students
  - *why they do it*
- > the affective processes that occur during studying
  - *how they feel about it*
- > the mental learning models of students
  - *how they see/conceptualize learning*
- > the way in which students regulate their learning
  - *how they plan and monitor learning*

See Handout 2

# Supported LS Models

- “Learning styles and pedagogy in post-16 learning: A systematic and critical review” (2004)
  - > *Simple, unfounded messages for practitioners...have too often been distilled from a highly contested field of research.*
  - > *Dunn and Dunn: Not advised for education or business*
  - > *Many commercial programs, applications, or assessment instruments have little empirical support*
  - > *Vermunt: More guarded and theoretically sound for application*

# Supported Applications of LS

## ◎ Increase self-awareness and metacognition

- > Encourage learners to question, monitor, understand and adapt their methods
- > Best application: Teacher and tutor education on the limits and strengths in the field, allow students to create their own “learning style”

## ◎ A Lexicon of Learning

- > Allow students to realize and communicate their preferences for learning, thus building confidence
- > Provide students with a breadth of learning strategies for different tasks

# Unsupported Applications of LS

## ◎ Matching

- > Literature does not verify this as creating significant performance differences
- > Unrealistic application, and heavily associated with Dunn & Dunn's commercial tools

## ◎ Career Counseling

- > No detailed support for claims that students' career success will be predicated on a LS/career field match
- > Single greatest predictor for career attainment is self-efficacy

# Surprising Applications

## ◎ Purposeful Mismatching

- > Rejected by some LS theorists, holds minimally more empirical support than matching studies
- > More diversity of presentation to maintain interest
- > Increases student responsibility for learning outcomes (teacher no longer caters directly to student's preference)

# Educational Motivation and Learning Styles

- ◉ Vermunt's LS model posits transitive learning approaches
  - > LS's can be adjusted to make students *more* or less successful
- ◉ **GOAL OBJECT THEORY** is a cognitive motivational theory
  - > Proponents argue that student orientation towards knowledge and ability best predict persistence and success

# Vermunt and Dweck: Overlapping at Orientation

- Vermunt's highest level of **learning orientation** is based on "self-improvement and enrichment"
- Highest level of **regulation of learning** asks students to "self-guide" their learning and "diagnose and correct poor understanding"
- How does that look in an everyday application?

See Handout 2

# Vermunt and Dweck

- ◉ Dweck reconceptualizes “ability”
- ◉ Claims two opposed mindsets:
  - > **Fixed:** Abilities are stable and immutable
    - Mistakes are representations of a lack of ability
    - Ability is determined by performance
  - > **Growth:** Ability is a process, developed over time
    - Mistakes are an assumed necessity during the acquisition of ability
    - Ability is developed/determined by process

# Fixed versus Growth

## Fixed

Personality and skills are permanent

Failure becomes a judgment, not a motivator

Work signifies a lack of ability; achievement should come naturally

Motivated by performance/fear of exposure

Performance-based goals

## Growth

Personality is mutable and developing

Failure is expected; assumed ability is minimal

Work stands as a necessity for the cultivation of ability

Motivated by reward of competency

Mastery-based goals

**Fixed Mind-set**  
Intelligence is static

Leads to a desire to look smart and therefore a tendency to...

**Growth Mind-set**  
Intelligence can be developed

Leads to a desire to learn and therefore a tendency to...

**CHALLENGES**

...avoid challenges

...embrace challenges

**OBSTACLES**

...give up easily

...persist in the face of setbacks

**EFFORT**

...see effort as fruitless or worse

...see effort as the path to mastery

**CRITICISM**

...ignore useful negative feedback

...learn from criticism

**SUCCESS OF OTHERS**

...feel threatened by the success of others

...find lessons and inspiration in the success of others

As a result, they may plateau early and achieve less than their full potential.

All this confirms a **deterministic view of the world.**

As a result, they reach ever-higher levels of achievement.

All this gives them a **greater sense of free will.**

# Applications and Ideas

- How can parents and educators use broad field of Learning Styles to empower their students?
- What useful connections do you see between discussing your child's learning style and Dweck's Mindset theory?
- How can parents discuss success with their students to encourage a growth mindset?
- What mindset do you believe is promoted in your home/classroom?
