

Congratulations!
YOU PURCHASED VINYL GRAPHICS
FROM GetSTENCILS.COM****

PLEASE READ ALL DIRECTIONS PRIOR TO APPLYING YOUR VINYL GRAPHICS.

The vinyl graphic is printed onto 3 mil white vinyl with an adhesive backing. The pigment is permanent ink so your graphics should wear well over time. Your graphic has been cut out and application tape has been applied over the graphic. The clear or frosted application tape makes placement easier and maintains spacing for lettering or multiple part graphics.

Removing the backing exposes the adhesive surface. **DO NOT** remove the backing from the graphic until the surface has been prepared and you are ready to apply it.

DO NOT remove the application tape until the vinyl graphic is in place.

APPLICATION INSTRUCTIONS

1. TRIM THE GRAPHIC

If the area where you are placing the graphic is tight on space, you may want to trim the graphic more to size. If not, then skip this step.

2. LOCATE AND PREPARE THE SURFACE

Make sure the surface where you will be placing your vinyl graphic is clean and free of oils and residue.

3. APPLY THE GRAPHIC

Peel back the top half of the backing from the graphic. Then place the item down in the proper position.

Carefully, lift up the top part of the graphic, and remove the remaining backing.

Lay the lower portion into position.

4. RUB THE VINLY GRAPHIC IN PLACE

Gently rub your finger over the graphic image to make sure it is adhering to the surface. Pay special attention to the edges.

5. APPLICATION TAPE REMOVAL

Gently remove the application tape by pulling the tape back over itself. Be very careful when removing the application tape. This is particularly true if you have lettering that has "center" parts of the lettering or graphics (like the center section of the letter "O").

6. BURNISHING THE GRAPHIC AND EDGES IN PLACE

Gently go back over the image to make certain all edges are burnished (rubbed) down and adhering to the surface. Make sure you don't have any air bubbles.

7. OPTIONAL CLEAR COAT

You may wish to apply a very light clear coat over the entire surface to give your model a nice uniform sheen.

PLEASE NOTE:

THIS IS THE SAME TYPE OF VINYL THAT IS USED ON OUTDOOR SIGNS. IT WILL HOLD UP WELL FOR YEARS.
