Keeping Score When It Counts:
Assessing the Academic Records of the 2017-2018
Bowl-bound College Football Teams
By Richard Lapchick with Brett Estrella, Chelsea Stewart, Cymonne New, Gustavo Costa, Nataliya Bredikhina, Paris Rainey, and Zachary Gerhart

Orlando, FL... December 4, 2017 – The overall academic progress of college football student-athletes continued while the substantial gap between white and African-American football student-athletes narrowed but still remained large for the 78 Football Bowl Subdivision (FBS) eligible schools. The results were reported in “Keeping Score When It Counts: Assessing the Academic Records of the 2017-2018 Bowl-bound College Football Teams,” a study released by The Institute for Diversity and Ethics in Sport (TIDES) at the University of Central Florida.

Richard Lapchick, director of TIDES and the primary author of the study, said, “The academic success of FBS football student-athletes continued to grow this year. The overall football student-athlete Graduation Success Rate (GSR) for bowl-bound teams is 77 percent, up from 75 percent in 2016.”

Lapchick added, “This year, 100 percent of the schools participating in a bowl game had at least a 50 percent Graduation Success Rate for their football teams compared to last year when 99 percent (79 of the 80) of the schools had a 50 percent GSR. Both APR and GSR figures are showing signs of slow progress.

Lapchick stated, “However, the gap between white and African-American football student-athletes continues to be a major issue standing at 16 percent this year. The good news is it is shrinking as last year’s report showed a 19 percent difference between the two groups. Among the 78 bowl-bound teams, the average GSR for African-American student-athletes is 71 percent, up from 68 percent in 2016. The average GSR for white football student-athletes is 87 percent, which has remained the same as last year. In addition, just two teams graduated less than half of their African-American football student-athletes, which is an improvement from five schools in 2016. No team graduated less than half of its white football student-athletes.”
Lapchick noted, “It must be emphasized that African-American and white football players graduate at a higher rate than their male non-athletic peers in the student body within D1 schools. The graduation rate for African-American male students as a whole is only 41 percent, in comparison to the 65 percent graduation rate for white male students, according to the NCAA Education and Research Data. That 24 percent gap for the general student population remains totally unacceptable for education in America. The problem goes back to the academic preparation students get before they ever get to college.”

Lapchick said, “Alabama, Clemson, Oklahoma, and Georgia which will contend in the college football playoff for the National Championship, all had reasonable academic standing aside from Georgia. Alabama and Clemson’s APRs led the pack at 980 which ranks them among the top 20 out of the 78 bowl-bound teams. Oklahoma followed with a 965 and finally Georgia with 961. They graduated 84 percent, 85 percent, 72 percent, and 53 percent of all their football student-athletes, respectively. As for their African-American student-athletes, they graduated, 79 percent, 81 percent, 65 percent, and 44 percent, respectively. Their white football student-athletes graduated at rates of 95 percent, 100 percent, 89 percent, and 73 percent, respectively.

Wake Forest University, University of Central Florida, Mississippi State University, Duke University, Stanford University, University of Notre Dame, University of South Carolina, and Northwestern University would have played for the National Championship if there was a college football playoff based on Graduation Success Rates among bowl teams. All teams graduated at least 93 percent of all football student-athletes and at least 81 percent of African-American football student-athletes. Duke University, Northwestern University, and University of South Carolina graduated at least 95 percent of their African-American football student-athletes.”

Troubling statistics in the study of the bowl-bound team included:

- 75 schools (96 percent) * had GSRs of 70 percent or higher for white football student-athletes, which was more than 1.75 times the number of schools with equivalent GSRs for African-American football student-athletes (41 schools or 53 percent). *

- All bowl-bound schools graduated 50 percent or higher of their white football student-athletes while two of the 78* bowl-bound schools (2.6 percent) graduated less than 50 percent of their African-American football student-athletes.

In addition, the size of the gap among some schools is alarming:

- 6 schools (8 percent) * had GSRs for African-American football student-athletes that were at least 30 percentage points lower than their rates for white football student-athletes, which is a decrease from 15 percent in the 2016 study.
30 schools (38 percent) * had GSRs for African-American football student-athletes that were at least 20 percentage points lower than their rates for white football student-athletes, which is an increase from 36 percent in the 2016 study.

Six schools had Graduation Success Rates for their African-American football student-athletes that exceeded their rates for white football student-athletes, up from four schools in 2016. They were the University of Louisville (18 percentage points higher), University of Southern Mississippi (6 percentage points higher), University of Utah (6 percentage points higher), Utah State University (5 percentage points higher), University of Central Florida (5 percentage points higher), and the University of Alabama at Birmingham (4 percentage points higher). New Mexico State University and Duke University had the same GSR for African-American and white football student-athletes.

Three bowl-bound schools had overall GSRs for football student-athletes that were better than for the overall student-athletes of the school. They were Northwestern University (2 percentage points higher), Mississippi State University (4 percentage points higher), and South Carolina University (5 percentage points higher).

The top 15 APR schools are represented in several conferences. The Big Ten and Pac-12 had three schools make the cut. The American Athletic Conference, SEC, and ACC had two schools while the MAC and Conference USA had one team each. In addition, there was one Independent school.

This year there will be nine bowl games in which both teams have APRs higher or equal to 970. The Sugar Bowl has Clemson and Alabama with APRs of 980 each. The Peach Bowl has UCF and Auburn with APRs of 984 and 980, respectively. The Outback Bowl has Michigan and South Carolina with APRs of 993 and 970, respectively. The TaxSlayer Bowl has Mississippi State and Louisville with APRs 974 and 988, respectively. The Texas Bowl has Texas and Missouri with APRs 978 and 974, respectively. The Pinstripe Bowl has Boston College and Iowa with APRs 978 and 971, respectively. The Cactus Bowl has Kansas State and UCLA with APRs 975 and 971, respectively. The Quick Lane Bowl has Duke and Northern Illinois with APRs 992 and 976, respectively. The Las Vegas Bowl has Boise State and Oregon with APRs 979 and 974, respectively.

NCAA statistics were used in this study. The Institute reviewed data collected by the NCAA from member institutions for the graduation rate study. The Institute reviewed the six-year graduation rates of each school’s freshman class that enrolled in 2010-11, and it then calculated a four-class average (freshmen classes of 2007-08, 2008-09, 2009-10, 2010-11).

The NCAA created the APR in 2004 as part of an academic reform package designed to more accurately measure student-athletes’ academic success as well as improve graduation rates at member institutions. The APR holds each team accountable for the success of student-athletes in the classroom and their progression towards graduation. Individual teams are penalized if they fall below an APR score of 930, which is an expected graduation rate of 50 percent of its student-athletes. As of now, scholarship reductions are the only penalties: up to 10 percent of scholarships
can be taken away. Historical penalties will be imposed on schools who continue to fall below the 930 APR.

The new postseason eligibility structure took effect in the 2012-13 academic year, with a three-year implementation window, which moved the benchmark from 900 to 930. For access to postseason competition in 2016-17, teams must achieve a 930 four-year average APR or a 940 average over the most recent two years to participate in championships.

In this year’s study, all bowl bound teams surpassed an APR of 930. Last year, one team fell below that threshold.

The APR data does not include data from the 2016-17 academic performances of the teams in the study but instead uses four years of data ending in the 2015-16 school year. This is the most updated data available on the NCAA website.

The study was co-authored by Brett Estrella, Chelsea Stewart, Cymonne New, Gustavo Costa, Nataliya Bredikhina, Paris Rainey, and Zachary Gerhart

The Institute has taken the position that Federal Graduation Rates (FGR) gives an unfair depiction of a school because it does not account for transfer students. A student-athlete who transfers in good standing and graduates at another institution counts as a non-graduate at the initial school. The FGR also does not count a junior college student who transfers into a four-year college and graduates as a graduate or a former student-athlete who returns and graduates more than six years after original enrollment. The Institute supports the NCAA’s use of the Graduation Success Rates (GSR), developed in 2005, which accounts for these factors, as a better way to fairly measure the results.

The Institute for Diversity and Ethics in Sport (“TIDES” or the “Institute”) serves as a comprehensive resource for issues related to gender and race in amateur, collegiate and professional sport. The Institute researches and publishes a variety of studies, including annual studies of student-athlete graduation rates and racial attitudes in sport as well as the internationally recognized Racial and Gender Report Card, an assessment of hiring practices in professional and college sport. The Institute also monitors some of the critical ethical issues in college and professional sport, including the potential for exploitation of student-athletes, gambling, performance-enhancing drugs and violence in sport.

The Institute for Diversity and Ethics in Sport is part of the DeVos Sport Business Management Graduate Program in the University of Central Florida’s College of Business Administration. This landmark program focuses on business skills necessary for graduates to conduct successful careers in the rapidly changing and dynamic sports industry while also emphasizing diversity, community service and social issues in sport.
