

8KW Generator & 4KW Light Tower

This 8,000 watt three phase generator is gasoline powered and mounted on a 4 wheel trailer with a 2" hitch for easy towing. It has the convenience of running on gasoline so you don't have to be concerned with diesel fuel during your event. It is a quiet running unit.

There is a crank up two-section tower that has four 1,000 watt lamps mounted on it to light up the night while still having AC power in reserve.

Remote power distribution can come from optional 50 amp cables and distribution boxes or you can plug into the Edison outlet on the generator.
