Business Courses

BUSINESS PLAN WRITING WORKSHOP-20 HOURS

A carefully written business plan is critical for attracting potential investors, vital to potential funding sources, and is an indispensable guide for business operations. The objective of this course is to familiarize students with the essential elements of a business plan. Participants will organize their thoughts, concepts, and strategies, and incorporate them into this valuable and necessary business tool. Participants will become skilled in gathering information, performing an analysis of their business idea, and completing a business plan. Participants will also learn to use the business plan as a business start-up, continuing operations-, or business expansion- guide.

Participants will create the following:

Executive Summary: Summarizes everything for a "quick read" that tells potential investors what they'll find in the details of your entire business plan. This section is written last.

Company Summary: Tells potential investors about your company and its history.

Product and Services Summary: Introduces your readers to the products and/or services you will be selling.

Market Analysis Summary: Help readers understand your organization by helping them understand your industry.

Marketing Strategy: Explain how your marketing strategy will contribute to the success of your business.

Management Summary: Put your management team on "Center Stage". This could be the KEY to getting the money you need.

BUSINESS WRITING – 20 HOURS

Course Objective:

One of the most essential qualifications for almost any business, community, or volunteer role is the ability to communicate effectively in written form. Often, a decision is made regarding an opportunity based on how you write, long before the hiring manager has met you in person. In a digital world where acronyms and abbreviations have become the norm, written language skills have become a lost art. The ability to put words together that can inspire, motivate and effectively communicate with others, will have a positive impact on workplace performance and upward mobility.

Course Content:

This course is a hands-on exploration of the kinds of communication that take place in business. Students will learn the do's and don'ts of the various written communications formats.

Topics will include:

The role of the written word in today's workplace, Myths and truths about great writers, Types of business writing :Letter, Memorandum, Email, Report, Proposal, Business Plan, Speech, Creative Copy, Writing Fundamentals, Barriers of Effective Communication, Writing Tips and Techniques

The course will utilize lecture, interactive exercises and practical assignments to help the students develop skills that are invaluable in the workplace. Remember that you are often judged by how you write – email, letter, resume – long before you ever meet the other party. Learn how to make a great impression every time.

Business Courses

CONFLICT RESOLUTION – 20 HOURS

Course Objective:

Conflict resolution is one of the most difficult areas to master, both at work and in one's personal life. Given the diverse mix of ethnicity, perspective, culture, gender and opinion that exist in the modern workplace, conflict from time to time is inevitable. This course gives the attendee an opportunity to develop soft skills that will have a positive impact on relationships with employees, bosses, spouses, children and anyone else in one's circle of influence. The ability to successfully dial down the volume in a crisis situation and reach a mutually satisfactory resolution will add value in any workplace and improve one's overall quality of life.

Course Content:

This course features lecture, case studies and interactive activities designed to teach the attendees a variety of techniques for successfully navigating a conflict situation. By the end of the courses students will...

- understand the role that conflict plays in the workplace
- Have an understanding of personality styles and their impact
- Know how to confront a co-worker or subordinate in an appropriate manner
- Be able to recognize a pending escalation of an emotional situation
- Possess new skills for negotiation and keeping the peace
- Be acquainted with several techniques for locating common ground
- Have the ability to effectively "manage up"
- Know how to confidently negotiate win-win outcomes

A powerful attribute of the successful professional is the ability to facilitate consensus when perspectives differ. There may not be a more valuable weapon in your arsenal.

PRODUCTION ASSISTANT WORKSHOP-24 HOURS

This two day, bootcamp-style Production Assistant workshop is perfect for those just starting their career as a PA as well as those looking to advance their knowledge of what it takes to succeed as an office or on set production assistant working on commercials, industrials, music videos, independent films, television series and studio features.

Training includes, but is not limited to:
Production Terminology and Paperwork

Film Crew Titles & Job Descriptions

Production Assistant Duties & Responsibilities

Set Etiquette » Dos & Don'ts

How a Typical Set Day Proceeds (on music videos, commercials, feature films, etc.)

Locking Up the Set, Distribution, and Petty Cash

Walkie Protocol, Terminology & Sign Out

Setting Up Video Village, Extras Holding, and Supporting Your AD Team

We discuss must have PA gear and kits, provide hands-on equipment training, and share resume tips and where to find experience as well as paid work. Learn how successful office and set PAs as well as DGA assistant directors got into the business, what they look for when they hire PAs, their tips for **SUCCESS**, and how to avoid their pet peeves. This bootcamp simulates a typical day on set to prepare new PAs for their first job, and more experienced PAs the knowledge and training they need to up their skills and compete in the fast paced and growing Georgia film industry. All students who finish the two day workshop are listed on the GPP member only website database, and offered internship and paid work opportunities for at least two years through a secret FB page that only these students and Producer Linda Burns can access for networking and mentorship.

Business Courses

- How to conduct research
- How to find a match for your project
- How to organize your writing
- How to complete each section of the grant proposal
- How to accept rejection
- The next steps to take after grant is approved
- Reporting criteria for approved grants

Business Courses

SMALL BUSINESS BLUEPRINT – 20 HOURS

Course Description:

Do you have a business idea? Invention? Or are you just tired of the rat race? Well, starting your own business has probably crossed your mind, but then you asked: how do I start? Where do I go from here? Should I file a Corporation, LLC, S Corp, sole proprietorship? What's the difference? Do I need a lawyer and what will it cost? Do I need an accountant too? Discouragement, overwhelming information, and too many options can, did or will deter you from pursuing your dream, or perhaps you decided to just wing it – but even that isn't quite working out! Starting a business is actually much simpler today in the United States than ever before anywhere in the world. All the confusion and fear can be mitigated by a simple understanding of the business and financial rules in this country. In this Foundation SMB Course participants will gain an understanding of the basic necessities to get a business up and running in full compliance with local and federal regulations, along with the knowledge of how to structure the business for maximum proficiency to attain goals and objectives. Basically, if you want to successfully play in the sand pit, you need to know the rules of the pit!

Participants will learn;

- The legal requirements of establishing and running a business
- The difference between different business entity structures
- Where, why and how to establish a business entity
- The costs associated with establishing a business
- Implementations that will help with the credibility of the subsequent business
- What relationship with other companies are necessary to establish

Categorize your spending

Make budgeting/saving easy

Creativity

SCREENWRITING 101 – 15 HOURS

Course Objectives:

The first few pages of your screenplay are critical. Most execs, or Readers (people who want to become execs) will only give you about 10 pages to get them interested. That is why your screenplay must have a great beginning.

This is just one of the tips that you will learn in this Introduction to Screenwriting class. If you have a television show or movie in you, let us show you how to explore the possibilities of bringing it to life. Take advantage of the booming entertainment industry in Georgia, by writing and submitting your television/movie idea.

Students will learn:

Structure, Format & Action

3 Act Structure - breaking a story into beginning, middle and end

Turning Points – take the action in different directions

Proper Formatting – learn industry standards and techniques

Writing Action/Description – the greatest mark of an experienced writer

Character & Conflict

Building Your Protagonist – explore background, need(s), character flaw(s), and transformation

Building Your Antagonist – make your protagonist real, explore need(s) and downfall

Types of Conflict – the three major human strains

Hallmarks of Great Conflict – techniques to building greater conflict

Plot & Subplot

Plot by Act – techniques for creating and sustaining the momentum of the film through Act One, Act Two and Act Three

The Functions of Subplot – how to use subplots to enhance your story

The Structure of Subplot – usually the source of most loose- ends in a story

Dialogue & Rewriting

Good Dialogue – 6 techniques for improving your dialogue

Make It Even Better – a checklist for rewriting to a finished draft

You will also learn how to use software to help you maximize your creativity by providing the mechanics of screenwriting.

Outcomes:

Write a treatment for film and television

Use and apply correct scriptwriting format

Create compelling dialogue between characters

Learn how, and who, to pitch your concept

Creativity

A fusion of cardio and abs to increase fat burning and muscle toning in the stomach area! Class will begin with 15-20 minutes of cardio followed by 15-20 minutes of both standing abs and mat work. We will end with a cool down and stretch.

AFRICAN DANCE – 9 HOURS

Course Objectives:

To teach students rhythmic dance moves that will stretch and tone their bodies. The class begins with a warm-up, and progresses to energetic dancing. This unique course is focused on creating mobility and flexibility in the joints and spine. Using the unique rhythms of West Africa the focus will be on rhythmic stretching.

BASIC ZUMBA – 18 HOURS

Course Overview:

This course begins with an one-hour presentation which provides an overview of the Zumba fitness system—its origin, how it helps in body toning and sculpting, how it addresses stress, and a short demonstration of how it works. Join this exhilarating, effective, easy-to-follow, Latin-inspired, calorie-burning fitness-program that's moving millions of people toward health and fitness with joy and laughter. Zumba combines high energy and motivating music with unique moves and combinations to reduce worries and improve fitness. Routines feature aerobic/fitness interval training, fast and slow rhythms that tone and sculpt the body, and resistance training to maximize caloric output, fat burning, and total body toning.

Course Objective:

- Learn benefits of Zumba, a dynamic exercise and fitness system
- Increase motivation level to address individual fitness needs
- Earn several easy to follow dance steps used in Zumba exercise sessions
- Learn several dance routines that focus on different parts of the body
- Reduce weight (depends on effort level and number of sessions attended)
- Improve figure through body toning and sculpting (depends on effort level and sessions attended)
- Reduce stress, anxiety and worry

Course Outline:

- Zumba Course Overview and Objectives
- Zumba system – easy choreographed workout movements, steps, and dances
- Metabolism-boosting and strength-building

BELLY AND BUNS – 9 HOURS

Course Description

Fat accumulation starts in the stomach area and spreads downwards and upwards. When you start losing fat it falls off backwards which is why the buttocks area and stomach are the hardest areas to lose. Muscle training specific to these areas helps burn calories and fat creating a toned shape. Class designed for all levels.

Health and Fitness

BODIES IN MOTION – MOVE IT AND LOSE IT!

18 HOURS

Students will learn Shaolin Kung-Fu Boot Camp This ancient Chinese method exercises the body from the inside out. Standard exercises: sit-up, pushups, squats,etc but in a special way designed for mature participants.

Health and Fitness

HEALTHY VALENTINE TREATS—6 HOURS

Satisfy your loved ones sweet tooth without increasing their waistline with these delicious, lightened up sweet treats!

Here are a few simple tips to make the holiday season more healthful and less guilt ridden.

- Make realistic goals. The holiday season is not the time to place added stress on yourself by attempting to lose weight.
 - Use smaller plates if available when at a buffet-style party.
 - Try eating a healthy snack before going to a party to ease your hunger.
 - Conversation is calorie-free, but move away from the buffet so you won't be tempted to eat while you talk.
 - Scope out the buffet before you go up to make your selections.
 - Balance what you eat at parties with what you eat during the day.
 - Remember that beverages contain calories as well. Alcoholic beverages, home-made punches, and chocolate beverages tend to have sneaky calories that you may not bargain for. Consume these in moderation!
- Watch your portion sizes and take small "tastes" of high calorie dishes.

HOME WORKOUTS — 9 HOURS

Life can get busy, and oftentimes we find ourselves traveling or otherwise unable to get to our preferred health and fitness facility for a workout. Who says you need fancy equipment to get a solid strength workout? Whether you're traveling, can't make it to the gym, or simply prefer to exercise at home. A combination of cardio, strengthening, and toning exercises are sure to make you break a sweat and get those endorphins going no matter where you are.

Course Description:

Designed to show your exercises that require little to no equipment that can be performed at home on your own. Participants will be given workouts to perform at home on their own

LEBARRE— 9 HOURS

Course Description:

LeBarre training takes the hottest trend in ballet, and using make-sense progression combines balance, resistance, agility, working recovery, and eloquence into a challenging full body workout.

LeBarre is a workout like no other! This format combines Balance, Agility, Resistance, working Recovery and Eloquence into a challenging full body workout. Use the exercises alone or in unique sequencing patterns provided to create an entire LeBarre program! No dance experience or pink tights required!

Class topics include:

- Getting comfortable using your body weight against the Equalizer and moving around it
- Focus on body alignment and moving along the lines of the body
- progress in their use of the Equalizer experimenting with lifting it and moving with it
- Work on a routine format for songs using the different techniques you have learned in combined choreographed movements
- Incorporate the routine format and using the Equalizer for stretch and flexibility, creating your own short routine

Health and Fitness

LINE DANCING – 9 HOURS

Line dancing is practiced and learned in country-western dance bars, social clubs, dance clubs and ballrooms. It is sometimes combined on dance programs with other forms of country-western dance, such as two-step, western promenade dances, and as well as western-style variants of the waltz, polka and swing. Line dances have accompanied many popular music styles since the early 1970s including pop, swing, rock and roll, disco, Latin (salsa suelta), rhythm and blues and jazz. Work out your body and brain by learning these fun, energetic line dances. Lose weight and get fit, without knowing it. Styles include: country, Chicago, gangnam style, blurred lines. etc.

LOW IMPACT FLEX AND PUMP - 6 HOURS

Strength and flexibility class for those who are just beginning... Starting with warm up... Strength training and stretch with each exercise then ending with a bit of low to no impact cardio and cool down... Using props, music and dance to keep it fun and interesting! This class is truly designed for those who have limited range of movement and require low impact.

MAT TRAINING - 8 HOURS

Lunch time light strength training/callenetics. Focus on small connecting muscles. All routines done on mat.

MIXXED FIT - 9 HOURS

Created and founded by Lori Barcenilla in 2013. MixxedFit® is a people inspired fitness program that incorporates explosive movement and boot camp toning. We are committed to promoting healthy and active lifestyles through our style of dance fitness and proper nutrition. Everything about our dance fitness program can be described as explosive – all of our movements are always big, exaggerated, full-out, and our very best.

PILATES - 9 HOURS

Pilates is an innovative and safe system of mind-body exercise using a floor mat or a variety of equipment. It evolved from the principles of Joseph Pilates and can dramatically transform the way your body looks, feels and performs. Pilates builds strength without excess bulk, capable of creating a sleek, toned body with slender thighs and a flat abdomen. It is a safe, sensible exercise system that will help you look and feel your very best. It teaches body awareness, good posture and easy, graceful movement. Pilates also improves flexibility, agility and economy of motion. It can even help alleviate back pain.

Course Objectives:

- To demonstrate how to achieve strength and flexibility in the core (front/back abdominal areas) Students will improve in flexibility
- posture and abdominal strength and decreases in back, neck, and joint pain
- focus on core strength

STRETCH OUT-6 HOURS

Take a break to relax both physically and mentally. Relieving stress can reduce your risk of health complications and help you live out a better life. Whether its 10 minutes or 60 minutes every little bit helps.

STRENGTH TRAINING

The more muscle you have, the more calories you can consume. This is because muscles require calories whereas fat IS calories. Building muscle is an excellent way to boost metabolism, burn fat, promote bone health, and improve mental and physical strength. Join us for 30 to 45 minutes of strength training with the Breakfast Club Workout with Torch Fitness! We will learn how to conduct exercises without any equipment using our own body weight as resistance. Fitness logs will be provided for you to track your progress, note exercises names, and describe proper form. Now you can perform what you have learned from class on your own and within any setting; no more excuses! All levels encouraged.

Health and Fitness

Develop Progressions

Focused Cues in the music and from the instructor make this format so much fun!

YOGA – 8 HOURS

Did you know that yoga offers the following health benefits?

Decreased blood pressure

Slower pulse rate

Improved circulation

Decreased respiratory rate

Cardiovascular endurance

Healthy Organs

Improved Gastrointestinal functions

Immunity

Balanced metabolism, and more...

Come enjoy this class as you decrease the stress of the day while breathing and stretching your way to optimal health!

YOGALATES – 8 HOURS

This class is the beautiful pairing of two revered movement practices: Pilates and yoga. Yoga-lates is a core focused class that pulls from the ancient asanas of yoga as well as the core centered movement of Pilates. We will flow through the fundamentals of both practices. There is an emphasis on creating that “long, lean, dancer body” as well as cultivating a centered focused mind. What more could you ask for?

Health and Fitness

TDF KICK/HIIT COMBO — 8 HOURS

The most effective combo is here. Designed to give you maximum balance, control, core strengthening, and body sculpting combined with TDF Kick techniques that will leave you feeling ready to take on the world!

POUND — 8 HOURS

Using Ripstix®, lightly weighted drumsticks engineered specifically for exercising, POUND® transforms drumming into an incredibly effective way of working out.

Instead of listening to music, you become the music in this exhilarating full-body workout that combines cardio, conditioning, and strength training with yoga and Pilates-inspired movements.

Designed for all fitness levels, POUND® provides the perfect atmosphere for letting loose, getting energized, toning up and rockin' out! The workout is easily modifiable and the alternative vibe and welcoming philosophy appeals to men and women of all ages and abilities.

BLT WORKOUT — 8 HOURS

Bottom Legs Tummy! Excess weight in your core is the leading cause many to be pre-disposed to dis-ease in the body. This class will change all of that. Allowing your body the time to adapt, sculpt, and tone. This BLT is way better than eating one!

BREAKFAST CARDIO — 8 HOURS

Start off the morning with cardio for breakfast- A great way to boost metabolism, burn fat, and build muscle! Class design includes interval workouts which maximize the time spent exercising with short bursts of activity followed by an active rest period. An example: 45 Seconds of Step-Ups followed by 15-30 seconds of walking in place.

Health and Fitness

SPRING INTO FITNESS — 8 HOURS

This class shows another side of kettlebell training. NOT your typical swing kettlebell training. Also uses exercise bands in select portions of training for an all over body workout! This training emphasizes creating a strong back and core as well as alignment of the spine. This awesome course gets you ready for the coming warm weather!

BUTI YOGA — 8 HOURS

Buti Yoga workouts transform your BODY + SOUL with cardio-intensive bursts of tribal dance, primal movement + conditioning woven into a dynamic yoga practice

MINDFUL NUTRITION — 8 HOURS

Start the week off right with this Monday motivating class designed to help you develop your own healthy eating plan, build an exercise program, and fine tune a Healthier Lifestyle that fits your routine. Additionally we will discuss mindful eating and the mental components which keep us from being our best.

POWER OF POSITIVE THINKING — 8 HOURS

Weekly motivating class that targets any personal goal whether health related, financial, personal growth, attitude, career, and so on. Check in to track progress, make adjustments, redefine goals, etc.

Life/Work Skills

BASIC CAR CARE 101 – 8 HOURS

Description:

This course is intended to provide students with the knowledge to make economical decisions and take preventative measures to enhance the overall satisfaction of owning an automobile. Students will learn basic car care, maintenance, and repairs. The class discussions activities provide the fundamental knowledge and experience in owning and maintaining an automobile. Students will be instructed in routine maintenance, safety tips, checking fuels, battery and lights, replacing filters, tire care, as well as alternative fuels. Students will also learn what to look for in purchasing an automobile.

Students will immediately be able to apply the knowledge in class to their automobiles.

This course includes in-class activities and lab/shop activities. In class activities include:

- Lectures
- Discussions
- student presentations
- research

Lab/shop activities include completing designated procedures that involve inspection, replacement, and identification of automotive components. During lab/shop activities students will apply knowledge obtained from in-class discussions and readings to further advance their understanding of the automobile.

BASIC CAR CARE 102 – 9 HOURS

Life/Work Skills

PERSONAL SAFETY AND AWARENESS – 8 HOURS

This course will help participants become more aware of their surroundings and others and to be able to react to protect themselves. Participants will learn about the following topics:

Psychology of Criminal Predators: Ever wonder if there's any semblance to the criminal mind from person-to-person? We'll discuss how to help you identify a criminal predator to protect yourself.

Mental Preparedness: The key here is to be aware of your surroundings, be alert and clearly understand any possible threats.

Home Security: Never hide an extra key under a mat, a flower pot or any other easily accessible place!

Best way to secure your house to prevent a possible break-in.

What to do if someone comes to your home while you're there.

Windows & doors: how to best secure them.

Door Viewers: Virtually ever yhome has a 'peep' hole at the front door to see who is at the front door. However, is it a wide-angle viewer and the proper height for everyone in the household?

Physical Security: What items on your person can you use as a weapon if necessary? We'll teach you that!

Workplace Security: If a co-worker shows any form of violence, threatens you or has an emotional anger outburst, immediately contact your supervisor and make sure that they get security and human resources involved. You can be saving many lives including your own!

Parents & Children: Internet security: be sure to use an ISP (Internet Service Provider) that has parental controls to block adult material.

Violence: let your children know that if they become aware of a fellow student who has threatened violence against others, seek help immediately and tell them not to attempt to resolve it themselves.

Senior Citizens & Disabilities: Seniors and those with disabilities are some of our most vulnerable in our society. Criminals are awaiting to take advantage of anyone they can easily do so. We'll teach you how to protect your loved ones even if they're in a residential care facility. This will include licensing and certification information so you can research the institution and staff.

Automobile Security: Ever get bumped while driving in your car? Criminals use this type of staged auto accident to steal your car, cause you harm or possible insurance fraud. If you're involved in this be sure to stay in your car, call the police and only crack your window slightly to talk to those involved or asking questions. The main thing is to protect yourself!

Out of Town Travel: Everyone plans extensively for a vacation or trip. But, how often do they look at crime statistics in the areas in which you'll stay. We'll teach you what to do before leaving on a trip. When traveling abroad learn their customs, behaviors and accepted ways of doing things. You'll enjoy it much better without worrying about offending anyone.

Technological Security: Ever give your debit or credit card to a server and they walk off with it to process your payment? Well, you really don't know exactly what they did with it! We'll teach you how to protect yourself plus protecting yourself over the Internet when you order products.

Personal Protection Devices: Use a personal alarm, pepper spray, mace, firearm or another device...but be sure you know the law and regulations regarding the use of these items. Be sure to understand them and become thoroughly familiar with whatever device you choose.

Personal Security: if you're in an elevator and feel uncomfortable for any reason, do not press STOP or the 'Call' button. Press several buttons for upcoming floors and exit the first chance you get!

Domestic Violence: Unfortunately this is part of today's life. How should you best protect yourself and prevent domestic violence? We'll show you how to *refuse to be a victim* of domestic violence!

Stalking: OK, it will never happen to you! But, what if it does? Again, knowledge is your best defense. Learn how to best handle this difficult situation without getting yourself into a legal predicament.

The course topics range from personalized wall decor; to the miracle of mason jars: fun ways to incorporate functional design into your home with mason jars. Each class will consist of a different design topic, along with a choice of techniques on how to achieve your own unique look. Penny-Pinch Chic will also offer helpful tips on where to find inspirations, buy supplies, and obtain future project ideas. Students can expect to gain insight on how to recreate current designer trends, finding supplies, and shopping tips for future DIY projects; along with a host of home fashion ideas on a budget

PUBLIC SPEAKING / PRESENTATION SKILLS – 20 HOURS

Course Objective:

The thing people fear the most is not snakes, spiders or even death. The Number 1 Fear of all human beings is talking in front of people! Getting up in front of a group can be nerve-wracking, even for the most polished individuals, but it can be the key to success in almost any arena of life. Research has shown that there is a direct link between good presentation skills and life achievement. Simply put – developing your presentation skills can help you reach your goals. This course is a practical, hands-on introduction to what it takes to give an effective presentation. The skills you will develop will serve you well in a staff meeting, a training session, a banquet room or a job interview.

Participants will learn:

- The power of a great presentation
- What it takes to connect with an audience
- How to overcome "speech anxiety"
- The process for planning an excellent presentation Format, structure and content best practices
- Tips And techniques for delivering a dynamic presentation Dos and Don'ts of public speaking
- How to manage Q & A/interactive elements of a presentation

The course will offer participants the opportunity for on-camera practice of the skills they have learned, and constructive feedback on how to become a more effective presenter. Human resources professionals rate presentation skills as one of the top qualities they look for in candidates for open positions. Learn how to make a memorable impression – every time

Personal/Professional Development

SIGN LANGUAGE I – 18 HOURS

Description: Students will learn to sign at a basic level. They will learn about deaf culture and communities. In class, they will focus on the basic signing vocabulary and on how to form basic communication with the deaf.

Upon completion of this course the student will be able to:

- Demonstrate a basic American Sign Language vocabulary of 200-300 signs
- Demonstrate basic American Sign Language fingerspelling skills
- Apply rudimentary skills necessary to communicate about everyday situations with the deaf
- Appreciate the language and culture of deaf Americans
- Understand the impact of hearing-loss upon daily human interaction

Major Topics

- I. Basic vocabulary
- II. Basic fingerspelling
- III. Everyday situations in deaf communication
- IV. Language and culture of deaf Americans
- V. Impact of hearing-loss
- IV. "All about Me" instruction
- V. Sign in Song
- VI. "No Voice" Review

SIGN LANGUAGE II – 18 HOURS

Sign Language II, expands the students' vocabulary and enhances their expressive and receptive skills through class discussions, pair/group work, simulations, and presentations. The course is conducted entirely in American Sign Language. It includes grammar review and features extensive discussions of Deaf culture.

Upon completion of the course requirements, students will be able to:

1. Demonstrate additional expressive & receptive skills to those learned in American Sign Language II by engaging in ASL conversations with correct grammar;
2. Identify & describe the five registers of American Sign Language;
3. Employ non-manual grammar & facial expressions to match the appropriate register;
4. Identify and describe a vocabulary of at least 1,000 signs;
5. Interact with a Deaf person using American Sign Language;
6. Recall & apply the basic linguistics of American Sign Language in presentation format;
7. Practice classroom learning of Deaf Culture by attending numerous Deaf events within the Deaf Community;
8. Explain the etymology of signs

HOT CAREERS INFO SESSION – 1 HOUR

Learn what skills the job market is attracting and what type of training/certification/experience is required. Learn how to leverage your current experience/training to attract the latest careers.

Personal/Professional Development

CET-COMMITTEE EFFECTIVENESS TRAINING

EFFECTIVE PLANNING

Creating a Vision

Clarifying the mission

Setting goals and objectives

Agreeing on ground rules

Developing action plans and designating individual responsibilities

Establishing evaluation measures

EFFECTIVE MEETINGS

Determine the purposes for holding a meeting

Making advance preparations

Managing Meeting dynamics

Following up

GROUP PROBLEM SOLVING

Applying a six-step model in group problem solving

Using pragmatic problem-solving tools, such as brainstorming, cause and effect analysis, Pareto Analysis, and force field analysis

CONSENSUS DECISION-MAKING

Using everyone's information and viewpoint

Understanding how decisions get made in a group

Learning and applying guidelines for consensus decision making

Exploring the effect of synergy on group decisions

COMMUNICATING WITH CONSTITUENTS

Keeping constituents informed of committee progress

Developing a two-way communication strategy

Interviewing to gather relevant data

Improving presentation skills

Using the media effectively

UNDERSTANDING SELF AND OTHERS

Clarifying values

Using self assessment instruments

Understanding differences in Personal Style

INTERPERSONAL SKILLS

Giving and receiving effective feedback

Improving listening skills

Working with resistance

Managing Conflicts

GROUP DYNAMICS AND SHARED LEADERSHIP

Understanding task and maintenance roles

Assessing group effectiveness

Recognizing the stages of group development

Exploring the effects of power and competition

Practicing facilitative leadership

[Back to Table of Contents](#)

Project Management Courses

INTRO/OVERVIEW OF PROJECT MANAGEMENT – 4 HOURS

Course Description:

We are all project managers on a regular basis. Sometimes this happens in our workplace; often it is at home while parenting or in community service. At the end of this overview course, participants will begin to grasp the way projects begin and flow; and how to identify and address potential weaknesses and challenges. Participants will gain an understanding of the project management process and learn approaches to achieve successful project performance.

Participants will learn:

- Fundamentals of project management
- How to design a Project management cycle Assessment and evaluation criteria Tools to effectively manage a project.
- Project Management Professional (PMP) and Certified Associate in Project Management (CAPM) requirements

PROJECT MANAGEMENT FUNDAMENTALS – 12 HOURS

Course Overview

This course provides the foundation for understanding the broad concepts of successful planning, organization, and implementation within business. This course uses real-world examples and identifies common mistakes and pitfalls in project management. Topics covered include project scoping, estimating, budgeting, scheduling, tracking and controlling.

Project management is the most valuable skill in any work environment, industry, or organization, and students will gain an understanding of the project management process and learn approaches to achieve successful project performance. At the end of this course, students will grasp the way projects begin and flow; and how to identify and address potential weaknesses and challenges. Students will learn the fundamentals of project management, how to design a project, project management cycle, assessment and evaluation criteria, tools to effectively manage a project. Participants will immediately begin to enhance the project success factors for current, and future projects, upon applying the tools and techniques learned in this course.

Course Learning Objectives - *Students will achieve understanding in the following areas:*

- Master the key skills and qualities every project manager needs
- Lead projects, don't just "manage" them
- Avoid 15 most common mistakes new project managers make
- Learn from troubled, successful, and "recovered" projects
- Set the stage for success by effectively defining your project
- Build a usable project plan and an accurate work breakdown structure (WBS)
- Create budgets and schedules that help you manage risk
- Use powerful control and reporting techniques, including earned value management
- Smoothly manage project changes, issues, risks, deliverables, and quality

Project Management Courses

PROJECT MANAGEMENT INFO SESSION – 1 HOUR

If you have successfully completed the CompTIA Project+ Certification and are interested in obtaining your CAPM Project Management Certification, or if you are interested in Project Management Training and Certification, this info session is for you.

In this informative session:

- Learn why PM skills are the top skillsets in demand
- Understand the trend of creating PM jobs by 2020
- Review The Project Management Institutes' Certification Process
- Review The Project Management Body of Knowledge
- Understand the CAPM Requirements (experience, education, exam process)

CAPM CERTIFICATION PREP – 40 HOURS

Course outline:

The Certified Associate in Project Management (CAPM®) is a PMI credential that clearly showcase your value as a team member, and increase your project assignment responsibilities. This certification is recognized in over 200 countries. This course is for committed CAPM aspirants who want to pass their exam, successfully, on the first try. This training will meet the training requirements to sit for the exam.

Students will: Assess their knowledge level of the PMBOK (Project Management Body of Knowledge), a PMI reference text. Be ready sit for, and pass your PMI CAPM exam, and pass it with flying colors.

Learning Objectives:

At the end of the course students, will be fully able to: Understand the current and most recent PMI's PMBOK edition. Learn and practice PM principles that you will be tested upon during the CAPM exam. Evaluate your readiness to take the CAPM exam.

PROJECT MANAGEMENT PDU'S – 3-6 HOURS

The Project Management Institute (PMI) requires obtaining a certain number of PDUs to keep your certification current. The PMP certification requires 60 PDUS per 3-year cycle. Keep your project management certification up to date with our Professional Development Units curriculum. Course topics include training in best practices, and current applications, in Integration, Scope, Time, Cost, Quality, Human Resource, Communications, Risk, Procurement, and Stakeholder Management. You will also learn about the latest updates in the certification exam, as well as what aspects of the project management discipline have improved and changed to suit current and future business operations.

Project Management Courses

MICROSOFT PROJECT – 8 HOURS

Course Description:

Participants will use Microsoft Project to gain knowledge and skills to build, maintain, and control the project plan. Whether you are a project manager, PMP, or an individual responsible for scheduling, estimating, controlling, budgeting, or staffing the project, the course will provide you with the tools to accurately optimize these processes. Microsoft Project allows you to effectively manage the constraints of any type of project; either personally or professionally.

Participants will learn how to:

- Create the project plan
- Estimate task durations and dependencies
- Establish deadlines and constraints
- Create the task calendars
- Work with resources
- Predict project outcomes Analyze resource utilization
- Track project performance

PMP PREP –40 HOURS

PM certification measures your competency as a PM / validates your skills and knowledge through an internationally recognized organization Job skills in highest demand: project management!

Applicable in every company, regardless of size, maturity, industry, core competencies PM certification is most sought after credentials Emerging from recession requires top notch PM skills for implementing initiatives, realignment, and growth

What will Project Management certification do for you and your organization?-

Apply knowledge/tools/techniques to:

Effectively use resources to their maximum capacity Maximize return on investment for personal/professional projects
Recognize shortcomings in personal/professional projects
Identify what an organization truly does well and where focused improvement could have a tremendous positive impact
Add credibility to your professional profile
Increase your overall position/recognition/ value in marketplace
Provide you with a globally recognized skill set
Gives you an edge in the competitive global marketplace / Enables you to establish proven project management methodologies to ensure project success

Course includes

In depth instruction on PMI's 10 knowledge areas, 5 process groups, 650+ ITTOs, PLUS Professional Responsibility

In class as well as online testing: hundreds of questions with explanations

- Learn effective test taking strategies
- Understand the format of the exam
- Meet the required course hours needed to sit for the PMP exam

[Back to Table of Contents](#)

Wellness

7 DAY RAW FOOD CHALLENGE (9 HOURS)

7 day Motivational/Interactive Engagement for ongoing clients and weight loss. Includes grocery shopping tour. How to eat clean on a budget. How and Why raw for overall wellness. Recipes, full instructions and active support.

CELLULAR LEVEL DETOXIFICATION (ADVANCED) (7 HOURS)

1-5 day demo. Fasting, High Energy Foods and Fermentation.

EAT TO LIVE – 9 HOURS

Healthy eating in the workplace can be challenging. Learn how to make healthy, light food without sacrificing flavor! Moreover we will discuss how to implement healthy eating within all contexts including work, home, celebrations, and more. Bring your appetite and an open mind!

Participants will receive a cookbook from the American Dietetic Association- The cookbook is a compilation of the tastiest tried-and-true recipes, organized for creating seasonal menus. This mouth-watering cookbook contains 101 recipes - featuring Georgia produce and products. Class taught by a registered dietician.

EVERYONE CAN EAT RAW- 2 HOURS

introduction to a raw vegan lifestyle and tasting demonstration. Why raw and how to start preparing simple recipes at home. 2-3 basic recipes covered and Q&A

GREEN LIVING – 9 HOURS

This course will offer you training, information, tips, and advice on natural organic living, gardening, homecare, saving energy, pets, pest control, and a more natural way to live our lives. With the hopes to encourage people to think beyond just ourselves and be aware of the effects our choices have on our health and the health of our planet. Defining Health as a human being living the highest quality of life free from destructive habits and misinformed information that affect spirit, soul and body. True health is a component that allows your body to function and heal at its optimal level.

Topics include:

- Homecare, training you how to live in a eco– conscious home by saving energy, reducing toxicity, Composting to produce less trash and more.
- Living green shopping experiences where you will learn where to shop starting at local farm markets to cut down on Carbon Print.
- Receive enlightenment on healthy beauty products by learning what ingredients will harm your body over time. Understanding that most beauty products are consumed into the pores of the skin.
- Creating an environment for healthy children pertaining to the types of toys they play with, furniture, and the ingredients of disposable diapers, food etc.

HOMEMADE BEAUTY AND HOUSEHOLD PRODUCTS 9 HOURS

Objectives: Teach student how to create inexpensive, natural products from items they are familiar with. Students will create their own beauty, health, and household products.

Wellness

This class shows students how to use the products they already own to create all natural, beauty products, free of harmful chemicals found in commercially produced products. These products are good to the body, and will save hundreds of dollars in beauty care products.

LAUGHTER YOGA – 6 HOURS

Did you know that there are amazing health benefits to laughter?

Lowers blood pressure Increases blood flow / Works your diaphragm, Abdominal, respiratory, facial, leg, and back muscles / Reduces stress hormones / Increases response of disease-killing / Defend against respiratory / Increases memory and learning / Improves alertness, creativity, and memory

Feel great, energized and happy NOW during this laughter session! Learn fun laughter exercises, discover how to reduce stress through laughter, let go for a laughter meditation, and completely relax in a laughter visualization.

LEARN TO EAT AND COOK “CLEAN” – 8 HOURS

Clean eating is eating foods that are free of chemicals and are not processed, in other words, foods that are as close to the source as possible. It's about eating foods with fewer ingredients, whole grains, organic meats and eating several small meals per day. Eating clean does not mean going on a diet, it means maximizing your intake of the necessary nutrients for a longer stronger and more enjoyable life. Learn to prepare delicious conventional meals for your family, including meats, desserts, snacks, and beverages!

Discover the tremendous lifetime benefits of eating clean. Learn how to read labels to identify which foods to avoid and which to consume in the proper quantities.

Achieve:

More energy, Disease prevention, Better sleep, Eliminate toxins, Slows down aging, Better skin, Lowers cholesterol, Prevents heart disease, Permanent weight loss, and much more!

LET'S EAT FRESH-2 HOURS

1-2 hour presentation on how to eat fresh and why. A Interactive lunch and learn for groups. Simple science, take home fun worksheets, interactive food demos (2 recipes), tastings, prepare and serve lunch together.

NUTRITION 101 – 9 HOURS

Interested in learning how to be healthier, have more energy and feel great? Then this class is for you!

Learn the basics of how to create nutrition and health goals to motivate you to become healthier and to make meaningful, and permanent changes to your diet.

Understand the digestion process and the difference between good and bad carbohydrates and cholesterol (LDL and HDL) understand how vitamins, fiber, protein, and calcium affect your body as you age, understand food allergies.

Discover healthy ways to change your weight. Discover the real health benefits of including exercise in your schedule.

Become a more energetic and stress-free you by using tips on nutrition and exercise.

Wellness

NUTRITION 201 – 9 HOURS

Learn to monitor your food intake by plate reading. Plate reading allows you to visually breakdown a plate and determine how much carbs, protein, and fat you about to consume. Mastering this technique can help you maintain or lose weight without counting calories all the time. Additionally, we will conduct an optional body composition analysis at the beginning and end of the cycle. The analysis will tells us your body fat, muscle mass, body water, calorie needs, and more!

NUTRITION TRENDS – 9 HOURS

After learning the nutrition basics, explore the following topics:

Mind body connection - get motivated for your health
Healthy by choice not by chance-orientation
Foods that reduce disease
Healthy substitutions
Drug interactions
Healthy lifestyle choices
Secrets to healthy eating
Health power: mind body connection
Nutrition for your brain
Foods to help handle everyday stress

PHYSICAL HEALING – 9 HOURS

Course Objectives: Teach participants how to maintain a healthy lifestyle congruent to maintaining good health and reversing activities that deter healing.

Students will learn: How to get your body healthy enough to heal itself and reverse any sickness and disease holistically without the use of medication. Learn the causes of sickness & disease. Live your life to full potential by helping your body to heal itself from different health issues.

PREVENTING SICKNESS AND DISEASE NATURALLY— 9 HOURS

Course Overview:

This course will offer you training, information, tips, and advice on natural organic living, gardening, homecare, saving energy, pets, pest control, and a more natural way to live our lives. With the hopes to encourage people to think beyond just ourselves and be aware of the effects our choices have on our health and the health of our planet. Defining Health as a human being living the highest quality of life free from destructive habits and misinformed information that affect spirit, soul and body. True health is a component that allows your body to function and heal at its optimal level.

Course Description:

In this course we will go over Oxygen, a powerful catalyst for health. Driving oxygen deep down to the cellular level facilitates an internal healing environment for the human body. Quality nutrients that are vital to our overall health. Our nutritional program works with the body's natural, hormone response to the quality of foods consumed and the timing in which they are consumed. We provide you with the tools you need to reduce body fat, and preserve lean muscle through a superior, nutrient delivery system, and the elimination of toxins in the body. Homecare, training you how to live in a eco- conscious home by saving energy, reducing toxicity, Composting to produce less trash and more. Living green shopping experiences where you will learn where to shop starting at local farm markets to cut down on Carbon Print. Receive enlightenment on healthy beauty products by learning what ingredients will harm your body over time. Understanding that most beauty products are consumed into the pores of the skin. Creating an environment for healthy children pertaining to the types of toys they play with, furniture, and the ingredients of disposable diapers, food etc.

Outcome:

The overall outcome is to help people eliminate and replace destructive habits by using successful skills that will positively impact their health, marriage, relationships, family and to function and heal at optimal level.

Wellness

BREATH-VISUALIZATION-MOVEMENT™ — 6 HOURS

This course's focus is on total relaxation, using learned breathing techniques, visualization (mind relaxation) exercises and restorative movement that stimulate the parasympathetic nervous system, which increases the mind and body's ability to achieve a state of relaxation, consequently decreasing the stimulation of the sympathetic nervous system that is responsible for the destructive side effects of stress.

MEDITATION — 6 HOURS

Meditation is a practice in which an individual trains the mind or induces a mode of consciousness, either to realize some benefit or as an end in itself.

The term *meditation* refers to a broad variety of practices (much like the term *sports*) that includes techniques designed to promote relaxation, build internal energy or life force (*qi*, *ki*, *prana*, etc.) and develop compassion, love, patience, generosity and forgiveness. A particularly ambitious form of meditation aims at effortlessly sustained single-pointed concentration single-pointed analysis, meant to enable its practitioner to enjoy an indestructible sense of well-being while engaging in any life activity.

In this class you will be prompted to relax and go through a guided process of getting to a meditative state of mind. This session will be all about relieving stress, which in turn relieves physical and mental illnesses.

SECRETS TO HEALTHY LIVING — 9 HOURS

This course will guide you through *201 Secrets to Healthy Living, and the impact it has on your personal and professional lifestyle. During this course, participants will discover practical keys to a happy, healthy, satisfying, and long life. Professional doctors and health-care providers share their knowledge of proven methods that inform, motivate, and help participants create a healthy successful lifestyle. Participants will also obtain easy-to-access information that will help them obtain and maintain health and wellness.*

Students will learn...

- The telltale heart attack symptoms you may be ignoring
- How you can double your immunity to colds and flu
- Natural ways to slow mental aging and increase memory
- How to avoid obesity and diabetes in just minutes a day
- Cancer treatments your doctor may not have told you about
- ...and more...

[Back to Wellness](#)

[Back to Table of Content](#)

TECHNOLOGY

MICROSOFT OFFICE – 12 HOURS

All levels (Beginner, Intermediate, Advanced) of Microsoft Word, Excel, PowerPoint, Access, Publisher, Project

WHAT IS SERIES...1 HOUR

1 hour introduction to courses to current topics in business, technology, health and wellness — Big Data, Operations Management, Quality Assurance, SQL, Systems Analysis and Design, Periscope, etc...

BIG DATA FUNDAMENTALS – 9 HOURS

The shift from computation intensive to data intensive processing is causing organizations to re- examine how they process their business transactions. Extracting, interpreting, and learning from large datasets is integral for the organization's 2020 outlook.

Students will:

- Have a clear understanding of what of Big Data is
- Understand the necessity to switch to Big Data
- Understand Big Data's role in the corporate world
- Understand Big Data's role in providing better customer service
- See examples of Big Data in operation in different industries
- Understand the importance of data governance

WHAT IS...DATABASE MANAGEMENT? - 1 HOUR

Overview of database management concepts.

DATABASE MANAGEMENT – 15 HOURS

Course Overview:

A foundation course in terminology, concepts and applications of database processing including file organization and data structures. Course emphasizes database design using various modeling techniques including Entity- Relationship and Semantic- Object models; database implementation using the relational model, normalization, and SQL; database application design including control mechanisms, forms, reports and menus. Students will design, create and process a database to demonstrate competency in the course content.

TECHNOLOGY

WHAT IS...SQL? - 1 HOUR

Overview of SQL terminology, purpose, and use.

SQL FUNDAMENTALS – 8 HOURS

Did you know that virtually all databases employ the use of Standard Query Language?

Topics Include:

Working with database objects	Inserting data
Relational Database Concepts	Updating data
Reading data	Deleting data
Creating tables	Working with multiple tables

MICROSOFT ACCESS – 15 HOURS

An efficient means of managing data is by using databases. Information can be stored, linked, and managed using a database application such as Microsoft Office Access. In this training session, you will examine database concepts, and create and modify databases and their various objects using Microsoft Office Access.

Learning Outcomes:

- Examine database concepts and explore the Microsoft Office Access environment.
- Design a simple database.
- Build a new database with related tables.
- Manage the data in a table.
- Query a database using different methods.
- Design a form.
- Generate a report.
- Import and export data.

WHAT IS,...SYSTEMS ANALYSIS AND DESIGN—HOUR

Overview of analyzing and designing systems

SYSTEMS ANALYSIS AND DESIGN – 15 HOURS

This course provides an in-depth study of established and evolving methods of information system design and implementation. As a project based class, it demonstrates by example and experience the process of building systems from needs analysis and definition through specifications and implementation. Traditional life cycle methodologies are contrasted with object oriented analysis and prototyping.

Students are expected to obtain a proficient level of mastery of effective project plans creating and implementing and communicating. Students will demonstrate a mature level of mastery of applying systems design and analysis skill to address problems and opportunities in IT field by define requirements, perform feasibility study, conduct system modeling and build system with current technologies. Through implementation of a term project, students will exhibit communication, leadership, process analysis and superior computer skills.

TECHNOLOGY

QUICKBOOKS FOR BUSINESS – 8 HOURS

Learn to use QuickBooks to manage your business' finances.

Topics Include:

- Learn to navigate the QuickBooks workspace and become comfortable with using shortcuts, menus, and icons.
- Learn to start, backup, and restore company files.
- Learn how to add new accounts.
- Learn how to create new customers, vendors, service items, and inventory items.
- Learn about forms.
- Learn how to enter sales receipts, invoices, and credit memos.
- Learn how to enter credit card transactions.

WHAT IS...CRYSTAL REPORTS–1 HOUR

- Overview of crystal reports and uses

CRYSTAL REPORTS 15 HOURS

Crystal Reports is a report generation that gives you versatile access to your data, so you can retrieve, manage, sort, and build reports.

In this class, learn how to:

- Develop reports to transform data into meaningful information
- Create advanced graphical and crosstab reports
- Add calculations and program logic with the Formula Workshop
- Connect to data sources and extract data to meet reporting needs
- Building reports from the ground up
- Connecting to data sources natively, via OLE DB and ODBC
- Designing a crosstab and drill-down report
- Developing a summary report with drill-down capabilities

TECHNOLOGY

BECOME A TECHNOLOGY ENTREPRENEUR – 12 HOURS

Course Overview

Students will learn the fundamentals of technology entrepreneurship, and the process technology entrepreneurs use to start companies. Course teaches students how to start with a technology, evaluate its pros and cons, how to find high-potential commercial opportunity, acquire resources (talent and capital) learn to sell and market the idea, as well as how to manage rapid growth. The course will provide an overview of the process of creating and growing high potential ventures using several frameworks. Students will create and utilize a business model, and will leverage the power of teams to work on startup projects.

Course Learning Objectives

Aspiring tech entrepreneurs will learn to:

- Set up shop: build the team, assemble necessary startup assets (including technology and intellectual property), and get legal and financial affairs in order
- Secure capital: ask for money, nail the term sheet, and ask for more money
- Get out: know when to sell, who to sell to, and how to make it a happy exit for all stakeholders, including the employees

In addition, students will gain concept of the following:

- Technology Entrepreneurship
- Analyze Financial Statements to Determine Health of Business
- How New Opportunities Affect Company's Financial Health
- From Idea to Opportunity (Difference between them)
- Creativity and Innovation – How to Manage Both
- Financing Your Dream
- Major phases in the Technology Company's Life Cycle
- Understand and Avoid Common Pitfalls
- Surviving Crisis

TECHNOLOGY

IP NETWORKING FUNDAMENTALS – 15 HOURS

Course Overview

TCP/IP is a hot topic, because it's the glue that holds the Internet and the Web together, and network administrators need to stay on top of the latest developments. This course demystifies the amazing architecture and protocols of computers as they communicate over the Internet. While very complex, the Internet operates on a few relatively simple concepts that anyone can understand. Networks and networked applications are embedded in our lives, so understanding how these technologies work is invaluable. This course entails a detailed and practical overview of TCP/IP networking. The protocols are applied to make connectivity and other related services. Planning and deployment of network addressing structures, as well as router and switch configurations, are also examined. This course also introduces students to the field of networking. Emphasis is placed on network terminology and protocols, Local Area Networks (LANs), wide-area networks (WANs), OSI model, cabling, router programming, Ethernet, IP addressing, and network standards. Upon completion, students should be able to perform tasks related to networking mathematics, terminology, and models, media, Ethernet, subnetting, and TCP/IP Protocols

Course Learning Objectives

Students will achieve understanding in the following:

Transmission Control Protocol / Internet Protocol (TCP/IP) the de facto standard transmission medium worldwide for computer-to-computer communications; intranets, private internets, and the Internet

How to install and configure TCP/IP and its applications on clients and servers

Intranets, extranets, and virtual private networks (VPNs);

Information on building and enforcing security;

Newest protocols

Encryption, authentication, digital certificates, and signatures to set up a secure Internet credit card transaction

The latest information on building and administering a network, security, wireless and mobile networking, using Windows servers, working with Linux systems, and much more

TECHNOLOGY

BECOME A FRONTEND WEB DEVELOPER 12- HOURS

Course Overview

This introductory course will focus on the hands-on business of writing HTML code (utilizing HTML 5, CSS, and JavaScript) knowledge of basic control structures, language syntax, and file structures. Students will learn how to plan and design website for target audiences. Class focuses on techniques for client interfacing, project development, and web page mock-up. Also, hypertext design, navigation, application interface, copyright and ownership issues, ethics, privacy, licensing, and trademark issues will be addressed.

Course Learning Objectives

At this end of this course, the students should reach a mastery level of web design. Students should be able to design appealing Web pages using HTML and Cascading Style Sheets. Students should not only be able to produce visually exciting Web pages and developing dynamic contents using JavaScript, but also be able to manage and edit large projects. Students should exhibit communication, reasoning, critical thinking and problem solving skills toward achieving their goals.

Course objectives are listed for each program outcome:

Use and apply current IT discipline-related concepts and practices.

-Students will be able to design Web pages using HTML5.

-Students will be able to utilize Cascading Style Sheets to enhance visual effects of Web pages.

-Students will be able to integrate Java Script and multimedia technology into Web design.

Design and develop effective, IT-based solutions and integrate them into the user environment.

-Students will be able to design site structure and develop content for Web sites.

Create and implement effective project plans.

-Students will demonstrate the ability to plan, design and implement a functional Website.

Recognize the qualities necessary to succeed in a professional Environment.

Students will understand the roles and duties expected for a Webmaster.

TECHNOLOGY

BECOME A FULLSTACK WEB DEVELOPER-15 HOURS

Course Overview

A Full Stack Web Developer has a general knowledge in all steps from concept to finished product; both client- and server-side web development. The full-stack developer will have an increasingly important role in the web development of the future. A full-stack web developer is versed in all layers of a technology stack: server-side and client-side. This course is the complement to the Front End Web Development course, where students learned to design for the client side of the web site. In this course students will learn how to program on the server side, implement databases using MySQL/PHP/Apache and communicate to the client side through APIs. Students will learn how to create server-side, data-driven web applications that support the front-end and can scale to support hundreds/ thousands of users. Students will apply their skills to build a fully functional web and with back-end support.

Course Topics

- Server infrastructure
- Debugging the command line
- Web design
- Database administration
- Code versioning
- Backend language development

Course Learning Objectives

An orientation to client-side development, covering HTML, CSS, and JavaScript. On the server side, students will learn to implement SQL databases, and will use and communicate to the client side APIs. Students will also learn to create hybrid mobile applications, Students will build a fully functional web and hybrid mobile application with back-end support. Students will utilize and understand the different components that comprise the front and back end of web development, using the following technologies

HTML5

CSS

JavaScript

Web server: *Apache*

Programming: *PHP*

Database: *MySQL*

TECHNOLOGY

SOFTWARE DEFINED NETWORKS (SDN) FUNDAMENTALS 15 HOURS

Course Overview

SDN is an emerging paradigm in computer networking that allows a logically centralized software program to control the behavior of an entire network. Separating a network's control logic from the underlying physical routers and switches that forward traffic, allows network operators to write high-level control programs that specify the behavior of an entire network, taking the place of older conventional networks, that requires low-level device configuration. This course explores the emerging definitions, protocols, and standards for SDN—software-defined, software-driven, and programmable networks. Students will learn what's required for building networks that use software for bi-directional communication between applications and the underlying network infrastructure.

This course also discusses the historical networking environment that gave rise to SDN, as well as the latest advances in SDN technology. Students will learn how to configure, manage, troubleshoot, and debug an SDN. Topics include: History and evolution of SDN, Control and data plane separation, Control Plane, Network Virtualization, Data Plane, Programming SDNs, Verification and Debugging, Use Cases and Looking Forward.

Course Learning Objectives

Students will achieve understanding in the following:

- The potential benefits, as well as the risks, in shifting parts of a network to the SDN model
- How to make intelligent decisions about when to integrate SDN technologies in a network
- How to decide if your organization should be developing its own SDN applications or looking to acquire these from an outside vendor
- How to accelerate the ability to develop your own SDN application
- The evolution of the switch platforms that enable SDN
- The current state of the OpenFlow model and centralized network control
- Distributed and central control, including data plane generation
- Structure and capabilities of commercial and open source controllers
- Available technologies for network programmability
- Desktop-centric to highly distributed models
- Connecting instances of network-function virtualization and service chaining
- Information on constructing and maintaining an SDN network topology
- Idealized SDN framework for controllers, applications, and ecosystems

TECHNOLOGY

BECOME A DATA ANALYST-15 HOURS

Course Overview

“We live in a data-driven world. Increasingly, the efficient operation of organizations across sectors relies on the effective use of vast amounts of data. Making sense of big data is a combination of organizations having the tools, skills and more importantly, the mindset to see data as the new “oil” fueling a company. Unfortunately, the technology has evolved faster than the workforce skills to make sense of it and organizations across sectors must adapt to this new reality or perish.”

- Andreas Weigend, Ph.D Stanford, Head of the Social Data Lab at Stanford, former Chief Scientist, Amazon.com

This introductory course is designed to give students the necessary skills to analyze data, and is intended for individuals seeking to develop an understanding of Data Science. There are two components to this course. The first is a conceptual introduction to the ideas behind turning data into actionable knowledge. The second is a practical introduction to the tools that will be used in analyzing the data. In this course students will be introduced to main tools and ideas in the data analyst’s toolbox. The course gives an overview of the data, questions, and tools that data analysts work with. Students will understand how to change data into actionable knowledge using various data analysis tools. Students will learn the basics of Excel’s advanced functions, and use it to explore different types of data. They will also learn how to prepare data for analysis, compute various statistical measures, create meaningful data visualizations, create reusable functions, create models to predict expected future outcomes, and more!

Course Topics

- Introduction to Data Analytics and Overview of Data Analysis Tools
- Data Types and Structures
- Exploring and Visualizing Data
- Using Excel’s Advanced Functions to Manage, Sort, Filter, Update, and understand Data
- Data Relationships and Their Importance to Business Decisions

Course Learning Objectives

To prepare students to:

- Become an immediate contributor on a data science team
- Assist in reframing a business challenge as an analytics challenge
- Deploy a structured lifecycle approach to data analytics problems
- Apply appropriate analytic techniques and tools to analyze big data
- Tell a compelling story with the data to drive business action

TECHNOLOGY

DATA SCIENCE—12 HOURS

Course Overview

Businesses operate and thrive in a data-driven environment, and are being transformed by data-driven discovery and prediction. This course introduces the fundamental principles of data science, and explores the "data-analytic thinking" necessary for extracting useful knowledge and business value from the data collected. Additionally, students will understand the many data-mining techniques in use today. Students will acquire skills required for data analytics include scalable data management on and off the cloud, parallel algorithms, statistical modeling, and proficiency with a complex ecosystem of tools and platforms. Students will learn the basic techniques of data science, including SQL solutions, and design algorithms for data management, data clustering, and data mining. Students will also become familiar with statistical modeling - linear and non-linear regression.

Additionally, students will review examples of real-world business problems to illustrate these principles, to not only learn how to improve communication between business stakeholders and data scientists, but also how participate intelligently in their company's data science projects. Students will also discover how to think data-analytically, and fully appreciate how data science methods can support business decision-making.

Course Learning Objectives

Students completing this course will be able to demonstrate comprehension in the following:

- Understand how data science fits in your organization—and how you can use it for competitive advantage
- Treat data as a business asset that requires careful investment if you're to gain real value
- Approach business problems data-analytically, using the data-mining process to gather good data in the most appropriate way
- Learn general concepts for actually extracting knowledge from data
- Apply data science principles when interviewing data science job candidates

TECHNOLOGY

INTRODUCTION TO CYBER SECURITY –12 HOURS

Course Overview

The cyber world and the related uses of internet are surely getting a wider spectrum day by day. From small individual shopping issues to large corporate business dealings, all are making use of internet, as a mode of transacting and dealing, which saves resources and time. But as the use of internet has increased, the threat of illegal and unauthorized activity has also increased because of the diverse and open platform provided by platform. It has raised a greater attention towards the issue of cyber security.

In order to reduce your risk profile from threats such as data leaks, unwanted system access, and system compromises you need to be proactive in implementing cyber security mechanisms. Cyber Security Principles covers the fundamentals of computer/information security and you can apply these principles to systems you want to secure from single computing devices to large network environments.

Course will provide learners with principles of data and technology that frame and define cybersecurity. Learners will gain insight into the importance of cybersecurity and the integral role of cybersecurity professionals. Users will explore foundational cybersecurity principles, security architecture, risk management, attacks, incidents, and emerging IT and IS technologies.

Course Learning Objectives

Students completing this course will be able to demonstrate comprehension in the following:

- Preliminary knowledge regarding the working of internet
- Basic definition of cyber security and an introduction of related terminology
- Cyber security guidelines and standards prevalent in different parts of the world
- Chief issues pertaining to cyber security
- Cyber security tools and products available for a safe cyber space

TECHNOLOGY

INTRODUCTION TO COMPUTER SCIENCE –12 HOURS

Course Overview

The course emphasizes object-oriented programming methodology with a concentration on problem solving and algorithm development, and is meant to be the equivalent of a first-semester college-level course in computer science. It also includes the study of data structures, design, and abstraction. This course examines some of the fundamental ideas of the science of computing. Students will learn via lectures and hands-on assignments that cover a wide variety of topics, such as hardware organization, Networking, OS, Computer Architecture, Algorithms, the Internet, computer programming, limits of computing, and graphics.

The course uses broad coverage and clear exposition to present a complete picture of the dynamic computer science field. The course format is accessible to students from all backgrounds, utilizing a language-independent context to encourage the development of a practical, realistic understanding of the field.

Course Learning Objectives

Students completing this course should:

- Understand core areas of the computer science field (e.g., databases, human-computer interaction, scientific computation, artificial intelligence, software engineering)

- Understand binary and hexadecimal numbers and arithmetic and how they are used by computers.

- Understand basic computer programming concepts and techniques as they appear in HTML (formatting, hyperlinks, forms) and JavaScript (variables, conditionals).

- Understand advanced computer programming concepts and techniques (objects, functions, arguments, return values) as they appear in JavaScript.

- Understand the relationship between software design and implementation.

- Learn to communicate and solve problems effectively as a member of a team.

TECHNOLOGY

INTRODUCTION TO PROGRAMMING – 15 HOURS

Course Overview

This beginner course is for anyone who wants to develop fundamental programming skills and create computer programs. The primary focus is on teaching the student how to program using a free implementation of BASIC called Just BASIC. The course will gain an understanding of the role computation can play in solving problems, and will be introduced to programming techniques that apply to different environments, including other operating systems and the Internet.

This course provides a solid foundation for advancing to different programming languages. Students will use BASIC programming language to understand fundamental principles of computing that will help them to think and approach a software engineer. Students will learn how to work with graphical user interfaces, controls, variables, arrays, and loops. They will also examine subroutines, functions, and debugging. Additionally, they will be able to add sound and graphics to BASIC programs.

Course Learning Objectives

Students will gain confidence in their newly acquired programming abilities, and will demonstrate the ability to write small programs that allow them to accomplish useful goals.

Students will learn:

Programming Concepts

Programming Constructs and Structure

The User Interface

Utilizing Programming Logic to Make Decisions

TECHNOLOGY

BECOME AN ANDROID DEVELOPER – 12 HOURS

Course Overview

There has never been a better time to make the jump into app development. Mobile phones are quickly replacing computers all over the world, and soon there will be millions, if not billions, of new users hungry for every kind of app imaginable. Creating an app for Android doesn't require a full-blown integrated development environment.

Learn several simple, easy-to-learn and easy-to-use tools that make programming and testing Android apps a breeze. We'll show you how to test apps on an Android emulator. Developing an app for the most popular operating system is exciting. Thousands of new apps are designed and released each day in this era of smart devices. Learn how to program for the most popular mobile operating system: Android. Write apps for Android devices, including Galaxy.

Course Learning Objectives

Students will apply tools and techniques to create a fully functioning app, utilizing the following concepts:

- Basics of App Development

- What is XML

- What is Java

- What is the Development Environment

- Eclipse

- Android Studio

- Setting up PATH for Windows and Mac OSX

- Creating a Project

- Coding

- User Interface

- Layout and Views

- Fragments and Activities Basics of Intents

- Programming Languages

TECHNOLOGY

BECOME AN IOS DEVELOPER –12 HOURS

Course Overview

Thousands of new apps are designed and released each day in this era of smart devices. Learn how to program for one of the most popular mobile operating system: IOS. Write apps for iPhone and iPad devices. Students will apply tools and techniques to create a fully functioning app.

Beginning with the basics, this course provides an outline of the steps necessary to set up an iOS development environment. An introduction to the architecture of iOS 9 and programming in Swift is provided, followed by an in-depth look at the design of iOS applications and user interfaces. More advanced topics such as file handling, database management, in-app purchases, graphics drawing and animation are also covered, as are touch screen handling, gesture recognition, multitasking, iAds integration, location management, local notifications, camera access and video and audio playback support.

Course Learning Objectives

IOS programming is a really fun hobby, and can also be a very profitable venture if you create the right app. Students will discover how to create apps fast, and test them on the computer, as well as publish their app on the iTunes store.

Students will learn:

- Necessary Tools for App Development
- XCode Platform
- SWIFT Code
- Anatomy Of An App
- Developing A Basic App
- Essential Swift Concepts
- How To Upload Your App To The iTunes Store
