

Overall Site Audio System

Event Audio and Announcing The DSM 43 foot tractor/trailer will be parked in the middle of your venue to serve as the center of your music-quality event sound system. It is self contained (includes a generator) with 15,000 watts of professional audio power. We will drop the trailer in place and remove the tractor.

Large 15" cabinet speakers are placed on the roof to utilize the height for optimum sound distribution and maximum coverage. General event housekeeping announcing will be included along with playing background music. At the rear is a hydraulic lift-gate which is available as a platform/stage for your awards presentations if desired. The entire rig is without signage making it a superb and highly visible spot to display your sponsor banners.

Remote Audio Towers Three trailer mounted towers will be provided to elevate the speakers which are linked via radio to the programming from the tractor/trailer system. Each tower has four 15" cabinet speakers, and an amplifier, receiver and include generator or battery and power supply as appropriate.
