SELF SIGNED AUTHORIZATION FOR CREMATION

YOUR NAME: _____

GENDER: _____

I authorize Generations Cremation to cremate my body in accordance with their crematory's rules and regulations and State law regulations.

Mechanical or Radioactive Devices. Mechanical or radioactive devices, such as pacemakers, may be a hazard if placed in the cremation chamber. The Crematory will therefore not knowingly cremate any remains which contain such a device.

Weight Limits. Due to limitations on the cremation chamber, and restrictions by the local air quality district, the Crematory cannot cremate anyone in excess of 250 lbs. In the event the Decedent is over 250 lbs., another crematory may be used, and additional charges will apply.

Obligation of Crematory; Limitation on Damages. The obligation of the Crematory shall be limited to the cremation of the Decedent and the disposition of the cremated remains as directed herein. I agree to release and hold Generations, the Crematory, its affiliated companies and their employees and agents harmless from any and all loss, damages, liability or causes of action (including attorneys' fees and cost of litigation in connection with the cremation and disposition of the cremated remains as authorized herein, or the failure to properly identify the Decedent or to take possession of or make arrangements for the permanent disposition of the cremated remains. No warranties, express or implied, are made by the Crematory and damages shall be limited to the refund of the fee paid for the cremation.

The Cremation Process. I acknowledge the following: The human body burns with the casket, container, or other material in the cremation chamber. Some bone fragments are not combustible at the incineration temperature and, as a result, remain in the cremation chamber. During the cremation, the contents of the chamber may be moved to facilitate incineration. The chamber is composed of ceramic or other material which disintegrates slightly during each cremation and the product of that disintegration is commingled with the cremated remains. Nearly all of the contents of the cremation chamber, consisting of the cremated remains, disintegrated chamber material, and small amounts of residue from previous cremations, are removed together and crushed, pulverized, or ground to facilitate inurnment or scattering. Some residue remains in the cracks and uneven places of the chamber. Periodically, the accumulation of this residue is removed and interred in a dedicated cemetery property, or scattered at sea.
