

# Dodge Riverside Golf Course Flood Recovery

Council Bluffs, IA

elevate

The Dodge Riverside Golf Course is situated on the Iowa side of the Missouri River. Across the river the skyline of Omaha, Nebraska provides an aesthetic backdrop to many of the holes and tee boxes. Dodge Riverside Golf Course was devastated by flooding of the Missouri River. The flood destroyed many of the tee boxes, fairway features, and greens positioned on the backside of the levee of the Missouri River. Proceeding after the flooding we provided the City with an assessment of the damage of the course, provided course layouts, and refurbishment designs to get the course back into playability. Providing alternate course layout options allowed the number of rounds to continue through the playing season. \*

## Key Elements:

- ▶ Review and Assessment of flooding impacts
- ▶ Mitigation from future flood impacts
- ▶ Tree Assessment and replanting
- ▶ Green/Bunker Refurbishment
- ▶ Playability re-routing during construction

Budget: NA

Completed: 2013
