TRACHEOSTOMY TUBES

D.I.C.® Tracheostomy Tubes

Designed with a disposable inner cannula, which facilitates both patient care and helps reduce the possibility of post-procedural infection. Built-in, 15-mm termination for easy ventilator circuit attachment with or without inner cannula in place. Available in five adult sizes, uncuffed, cuffed, fenestrated and unfenestrated styles. Color-coded system allows for quick identification and correct sizing of tube and inner cannula.

ANCILLARY PRODUCTS & ACCESSORIES

Thermovent® T Heat and Moisture Exchanger (HME)

Exhibits low flow resistance and high moisture output, which helps to minimize the loss of heat and moisture in ventilated or spontaneously breathing patients. Has ISO-standard tapered ends to ensure a consistently leak-free seal.

	ITEM #	HCPCS	SOLD BY
	(SF)570016	A4483	ea

Thermovent® O₂ Oxygen Adaptor

Supplemental oxygen delivery adaptor for Thermovent® T. Clips over the Thermovent® T and provides a simple means of administering oxygen to the spontaneously breathing, tracheostomized patient.

	ITEM #	HCPCS	SOLD BY
26.7 g	(SF)100575010	A4649	ea

Thermovent® T2 HME (Heat and Moisture Exchanger)

Sterile, single-use heat and moisture exchanger provides effective humidification for spontaneously breathing patients whose upper airways are bypassed by a tracheostomy tube. Device can be used for a maximum period of 24 hours. Simple opening port allows quick and easy access for a suction catheter to aid the removal of secretions. Clear housing gives an aesthetic appearance and allows visualization of contamination. Integrated oxygen port can provide up to 60% oxygen concentrations to the patient via the simplest of connections. Original Portex® Thermovent® T paper media provides high level performance heat and moisture exchange to patient. Smooth, rounded edges aid patient comfort.

SMITHS MEDICAL (BJ/SF)

All Smiths Medical tracheostomy products are latex-free unless otherwise noted.

LATEX FREE

Thermovent® 600 Heat and Moisture Exchanging Filter

High efficiency HME (heat and moisture exchanging) paper elements. Recovers approximately 75% of the energy and moisture that would otherwise be lost through respiration. Low resistance to flow. Minimizes pressure build and reduces the work of breathing for weaning off the ventilator. Small dead space. Suitable for both ventilated and spontaneously breathing patients. Full compatibility with breathing systems or masks.

242 PediPrints™, ¾" wide, fits up to 9" neck	242	A7526	ea

Stabilock™ Endotracheal Tube Holder

Secures endotracheal tubes with fast and easy application, and provides a secure method of stabilization to help prevent accidental extubation. Adhesive base is applied to patient and includes a Velcro® strip that attaches to the neckband to prevent slipping. Skin-friendly adhesive can be left in place for up to three days. Tubing channel securely holds endotracheal tube in place with strong adhesive tape (such as cloth), and is made of lightweight, flexible material. Cushioned neckband is soft and comfortable on the face and neck, and uses Velcro® closures to adjust for a snug fit. Adhesive base can be adapted for men with facial hair by removing the rounded ends and applying to cheeks. Fits 7 mm – 10 mm endotracheal tube sizes.

HUMID-VENT®

Gibeck HUMID-VENT® heat and moisture exchangers, also called hygroscopic condensing humidifiers, offer a wide range of performance capabilities and configuration options to meet the unique needs of both anesthesia and respiratory care. Hygroscopic, bacteriostatic, microwell paper media provides optimal moisture output with low flow resistance. Many configuration options allow the clinician to choose the product best-suited to patient size, tidal volume and humidification needs. Filtered units provide bidirectional filtration with bacterial/viral efficiency up to 99.99%, offering cross-contamination protection for patients and equipment.

PMV005	L8501	ea

PMV® 007 Valve

Designed to fit inside adult disposable ventilator tubing. Adapter may be needed to adapt to pediatric circuits or closed-suctioning systems. Can be used off the ventilator. Aqua Color™, 15 mm I.D. / 22 mm O.D.

ITEM #	HCPCS	SOLD BY
PMV007	L8501	ea

PMV® 2000 Low Profile Valve

Lightweight and opens with less resistance than the original design. Clear design and lower profile offers less visibility for the more ambulatory user. Can be used inline with mechanical ventilators with a 22-mm silicone adapter. Includes one PMV® Secure-It® Strap. Clear, 15 mm I.D. / 23 mm O.D.

ITEM #	HCPCS	SOLD BY
PMV2000	L8501	ea

PMV® 2001 Low Profile Valve

Identical to the PMV® 2000 Low Profile Valve except for its color. More visible for in-patient use. Lightweight and opens with less resistance than the original design. Can be used inline with mechanical ventilators with a 22-mm silicone adapter. Includes one PMV® Secure-It® Strap. Purple Color™, 15 mm I.D. / 23 mm O.D.

ITEM #	HCPCS	SOLD BY
PMV2001	L8501	ea

PMV® 2020 Low Profile Valve

Attaches to the Premier Medical or Piling Weck brands of metal Jackson Improved tracheostomy tubes (sizes 4 – 6 or equivalent) with use of the Passy-Muir® Adapter 2020-S. Intended for use by short-term and long-term, non-ventilator-dependent, tracheostomy patients. Includes one PMA® 2020-S Adapter and one PMV® Secure-It® Strap. Clear, 15 mm I.D. / 23 mm O.D.

ADAPTERS

PMA® 2020-S Adapter

Used in conjunction only with the PMV® 2020 Low Profile Valve to attach to the Premier Medical or Piling Weck brand metal Jackson Improved tracheostomy tubes, sizes 4 – 6 or equivalent. Replacement part.

ITEM #	HCPCS	SOLD BY
PMA2020S	E1399	3/pk

PMV® 2000 Valve Oxygen Adapter

Small and lightweight. Clear and easily snaps onto the PMV® 2000 and PMV® 2001 Low Profile Valves. Allows for easy delivery of supplemental, low-flow oxygen (<6 lpm) and humidity. Users can improve their mobility and comfort by utilizing with oxygen tubing and a small portable oxygen tank, eliminating the need for bulky aerosol tubing. Oxygen is delivered in front of the diaphragm of the valve. This reduces complications associated with devices that provide continuous flow behind the diaphragm of a speaking valve, which may include air trapping, drying of secretions and possible cilia damage.

ITEM #	HCPCS	SOLD BY
PMA2000	E1399	ea

Passy-Muir® Secure-It® Strap

Plastic tether for use with the PMV® 2000, PMV® 2001 and PMV® 2020 Low Profile Valves. Attaches the valve to the tracheostomy tie to prevent valve loss.

Reusable Cannula Cuffless Tracheostomy Tubes

Designed for general pulmonary hygiene and for use with spontaneously breathing patients. Include an inner cannula with open lumen and low-profile connector to reduce bulk at stoma; a translucent, inner cannula with integral, 15-mm, twist-lock connector to permit connection of ancillary equipment; and a smooth, rounded-tip obturator to facilitate insertion. Nonfenestrated tube also includes an inner cannula with closed lumen to direct breathing to the upper airway. Fenestrated tube includes a fenestrated inner cannula with green, 15-mm connector and white, 15-mm cap, and aids in weaning and speaking. When used in conjunction with the decannulation cap, fenestrated tube directs breathing through the upper airway.

Reusable Cannula Cuffed (Low-Pressure) Tracheostomy Tubes

Manufactured with high-quality, compliant material that softens at body temperature. Low-pressure, cylindrical cuff helps protect sensitive tissue. Fenestrated tube allows weaning of patient from tube by facilitating upper airway breathing. Inner cannula with integral, 15-mm, twist-lock connector permits connection of ancillary equipment and can be cleaned to maintain airway patency. Include smooth, rounded-tip obturator to facilitate insertion. Fenestrated tube includes a fenestrated inner cannula with green, 15-mm connector and white, 15-mm cap. Fenestrated tube can be used with decannulation plug to permit upper airway breathing.

Neonatal and Pediatric Tracheostomy Tubes

Neonatal and pediatric tracheostomy tubes offer non-phthalate citric-based plasticizer, clear flange for easy visualization of the stoma site and recessed flange designed to help reduce skin contact. Trach tie recess on flange helps minimize unnecessary trauma while attaching a securement device, and flange variation may

help improve fit for neonatal and pediatric patients. Long pediatric tubes offer a longer cannula to fit larger pediatric patients. Each neonatal and pediatric tracheostomy tube comes with its own smooth, rounded-tip obturator to facilitate insertion. Designed to bypass upper airway obstructions, provide long-term ventilation and support and/or manage tracheal/bronchial secretions.

Tracheolife™ II HMEs

Single-use HME (heat and moisture exchanger) devices, complete with oxygen port positioned to allow heating and humidification of all inspired gases. Collection chamber ensures functionality and is not compromised by presence of sputum. Easy, nontraumatic replacement without additional assembly. Feature a high humidification efficiency and ISO-standard, 15-mm fitting. Central port allows suctioning and sampling to be performed without removing HME. Indicated for users who can breathe spontaneously. Intended to be replaced at least once every 24 hours. Individually packaged.

ITEM #	HCPCS	SOLD BY
353U1900	A7507	25/cs

Hygrolife™ HMEs

Hygroscopic HME (heat and moisture exchanger) medium traps the user's own moisture and minimizes heat loss. Low airflow resistance. Moisture output greater than 30 mg H₂O/l (ISO 9360, Vt 750 mL). Calcium chloride-treated HME medium improves effectiveness. End tidal CO₂ port offers convenient access to airway gases. ISO-standard 15-mm and 22-mm fittings. Indicated for use on anesthetized or respiratory care individuals who require a breathing circuit. Intended to be replaced at least once every 24 hours. Individually packaged.

Shiley™ Phonate Speaking Valves

Designed for use on alert, awake tracheostomy patients who can breathe independently without assisted mechanical ventilation. Connects to the tracheostomy tube and directs airflow past the vocal cords to facilitate speech. It permits easier vocalization without finger occlusion, which may cause hygiene and infection concerns. Directing airflow through the oral and nasal chambers also decreases secretions and improves swallowing and sense of smell.

Vent Circuit Anti-Disconnect

Designed to help keep ventilator securely fastened to tracheostomy tube, resulting in fewer accidental disconnects. Made of a unique cloth/foam laminate that is gentle on the skin and non-adhesive, yet grips vent circuit securely. Made with soft Velcro® tabs with rounded edges. Perforations in center allow easy threading of vent circuit. Foam securely grips vent circuit. Also works by wrapping it around the vent circuit and then securing the soft Velcro® tabs to the tracheostomy collar. Use with Marpac Tracheostomy Collars.
