New Logo & New Name ...

BUT OUR CONTINUED ATTENTION TO GREAT SERVICE AND BUILDING LASTING RELATIONSHIPS IS THE SAME

With the passing of our founder, it has become necessary to make a few technical adjustments. Over the next few months **MJS Safety LLC** will be transitioning to a new company name –

MJS Legacy Safety Consulting Services LLC

All of the services provided to you through **MJS Safety LLC** will remain the same and be available to you through **MJS Legacy Safety Consulting Services LLC** with no interruption. We are committed to carrying on the legacy that Mike envisioned for both the company and our clients, and will continue to make 'caring for our client's needs' our top priority.

The contact information for both Carrie Jordan and Jeremy Jordan will remain the same.

Please note a new shipping address as: 1026 N. 1st Street, Johnstown CO 80534.

There is no change to the mailing address as: P.O. Box 10, Johnstown CO 80534.

Our training facility and offices will not change: 1760 Broad St, Unit H, MILLIKEN, CO 80543.

It has been our distinct pleasure to serve your business needs for the past 26 years under **MJS Safety**. We look forward to continuing a productive and successful business relationship with you under the **MJS Legacy Safety** brand for many years to come.

carriejordan@mjssafety.com — jeremyjordan@mjssafety.net

Continuing to feel 'COVID weary'? It's a topic we still need to think about often, staying informed about restrictions, being safe for our co-workers, our friends and our families. Until we can move on from thinking daily about COVID-19, we'll do our best to provide you with as much helpful information as possible.

Here are Resource links that will provide the most current information and guidance for your workplace.

MJS Legacy Safety TRAINING SUMMARY

"SAFETY STARTS WITH YOU"

"Training Spotlight"

(there will be a different course featured monthly)

LOCKOUT/TAG OUT TRAINING - AWARENESS AND AUTHORIZED/AFFECTED EMPLOYEES

Employees engaged in activities that involve the control of hazardous energy must be trained to ensure that they understand the proper procedures to utilize during Lockout / Tag Out operations. This course covers the requirements of the 29 CFR 1910.147.

Awareness level training is 4 hours. Authorized / Affected Employee training is 1 day.

For all of our Course Offerings visit the MJS Safety website

Schedule of classes February 2022: • Training Center - 1760 Broad St, Unit H, Milliken, CO 80543

- *PEC Safeland Basic Orientation: NEW 2021 SAFELAND: Feb 15, 25; 8 4:30;

 This class available through video conference instructor led distance learning thru 6/30/22 only upon request
- *First Aid/CPR/AED/BLOODBORNE PATHOGENS (We offer MEDIC FIRST AID): *In Person Classes*: Feb 14, 28; 8 noon; *This class is also available for blended learning (online) with remote or in-person skills assessment*
- *Hydrogen Sulfide Awareness [ANSI Z390 -2017 Course]: Feb 14, 28; 12:30 4:30; This class available via Instructor Led video conference
- *OSHA 30 HOUR CONSTRUCTION SPANISH 4 day class: Jan 24, 25 & Feb 3, 4;
- *Fall Protection Training (4 hour Awareness and 8 hour Competent Person available): Feb 9;
- *Confined Space Entry Training Attendant, Supervisor, Competent Person & Entrant [NUCA Course]: Feb 10;
- *Confined Space Rescuer 2 day course: Feb 11; (Students <u>must complete</u> the Confined Space course to be eligible for the 2nd day Rescue Course)
- *PEC H2S CLEAR 4 hour (This course meets the ANSI Z390.1-2017 standard and may be required by some Oil & Gas Operators) [We are also able to offer this course through video conference instructor led distance learning upon request only through 6/30/2022] Scheduled upon request Call Carrie to schedule to fit your needs 720-203-4948

OSHA's Recordkeeping Requirements During the COVID-19 Pandemic

OSHA issued enforcement guidance related to the COVID-19 pandemic for Recording and Reporting Occupational Injuries and Illnesses required under 29 CFR Part 1904.

For more information see the Enforcement Memoranda section of OSHA's COVID-19 Safety and Health Topics page.

Drug Testing

More and more of the 3rd Party Auditing companies like NCMS and TPS Alert are requiring drug testing levels slightly above the levels of some of the regulatory levels to ensure drug testing is being completed each quarter.

MJS Legacy Safety Service conducts both drug testing and Auditing account management for our in-house consortium clients as well as the management of other client drug testing consortium accounts, such as DISA. Many have modified their random selections process to work more effectively when a policy is tied to multiple auditing agencies. In specific situations, this may result in slightly more random selections being generated than clients are previously used to seeing to ensure compliance with both the regulatory requirements as well as client specific requirements.

Drug testing policies typically mirror the requirements of an auditing agency (e.g. DOT, DCC, DISA Monitoring, NCMS, etc.). When customers setup a single policy for more than one monitoring agency, and these auditing agencies require different random percentages, the number of random selections generated may be lower than one of the two agencies requires.

If you have questions on the selection process,
need assistance with the management of your TPS Alert, NCM, or
other drug testing audit accounts,
or need to sign up for a consortium, give us a call!

January 6, 2022

State Labor Dept: Paid Sick Leave Continues in 2022

new requirements took effect Jan 1.

The Colorado Department of Labor and Employment (*CDLE*) is reminding workers and employers about paid sick leave requirements under the Healthy Families and Workplaces Act (*HFWA*). As of January 1, 2022, <u>no employers</u> — <u>public or private</u>, and <u>any size or industry</u> — are exempt (other than the federal government), and no employees are exempt either (other than some railroad employees).

HFWA provides two types of leave: public health emergency leave and accrued leave.

For both emergency and accrued leave:

- It must be paid for time on leave, and at the same pay rate the employee earns during time worked.
- It can't be counted against employees as absences that may lead to firing or other negative action.
- No "waiver" is allowed; employers and employees can't choose, for example, to have higher pay for time worked instead of the paid sick leave that HFWA requires.
- Employers can require documentation for accrued paid sick leave (not for COVID-related public health emergency leave), but only for absences of four or more consecutive days and employees can provide the documentation after the leave ends.

Public health emergency leave

WHAT: Two weeks of paid leave (80 hours if full-time, less if part-time) for COVID-related needs. This requirement took effect July 14, 2020, and remains in effect.

Emergency leave is usable for a range of COVID-related needs, not just for confirmed cases. Covid-related needs include:

- illness with COVID symptoms
- quarantining or isolating due to COVID exposure
- COVID testing
- vaccination and side effects
- inability to work due to health conditions that may increase susceptibility or risk of COVID
- COVID-related needs of family (illness, school closure, etc.).

Employers can't require documentation from employees to show that leave is for COVID-related needs. The emergency leave requirement remains ongoing, as long as a federal or a state "emergency" remains. As of the New Year, both federal and state emergency declarations remain in effect* Employees still have however many of their 80 hours they didn't use in 2021. They don't get a new 80 hours each time they have a COVID-related need, and don't have a new 80 hours in 2022, except that newly hired employees do get a new 80 hours.

Accrued leave:

WHAT: One hour of paid leave per 30 hours worked, up to 48 hours per year. This requirement took effect January 1, 2021, and is permanently in effect, not just during the COVID emergency.

Accrued leave is usable for a wide range of health and safety needs, not just COVID-related: Needs include:

- any mental or physical illness, injury, or health condition that prevents work;
- diagnosis, care, or treatment of such conditions;
- preventive care (including vaccination);
- needs due to suffering domestic violence, sexual abuse, or criminal harassment; or caring for family with such conditions or needs.

New in 2022

Starting January 1, 2022, small and large employers alike have the same accrued leave responsibilities. In 2021, employers with 15 or fewer employees had to provide emergency leave, but were exempt from accrued leave until the end of 2021. Paid leave in a PTO policy, or a Collective Bargaining Agreement, can satisfy HFWA, if it covers all the same conditions or needs, at the same pay rate, and with no tougher requirements (documentation, notice, etc.) than HFWA.

For more information on HFWA, see INFO #6B, our main published HFWA guidance — available along with a great deal of other guidance on Colorado labor laws.

EMERGENCY TEMPORARY STANDARD

January 13, 2022

Statement from Secretary of Labor Marty Walsh on Supreme Court Ruling on OSHA Emergency Temporary Standard on Vaccination, **Testing**

U.S. Secretary of Labor Marty Walsh issued the following statement on the Supreme Court ruling on the department's Occupational Safety and Health Administration's Emergency Temporary Standard on vaccination and testing:

"I am disappointed in the court's decision, which is a major setback to the health and safety of workers across the country. **OSHA** stands by the **Vaccination and Testing Emergency Temporary Standard** as the best way to protect the nation's workforce from a deadly virus that is infecting more than 750,000 Americans each day and has taken the lives of nearly a million Americans.

"OSHA promulgated the ETS under clear authority established by Congress to protect workers facing grave danger in the workplace, and COVID is without doubt such a danger. The emergency temporary standard is based on science and data that show the effectiveness of vaccines against the spread of coronavirus and the grave danger faced by unvaccinated workers. The commonsense standards established in the ETS remain critical, especially during the current surge, where unvaccinated people are 15-20 times more likely to die from COVID-19 than vaccinated people. OSHA will be evaluating all options to ensure workers are protected from this deadly virus.

"We urge all employers to require workers to get vaccinated or tested weekly to most effectively fight this deadly virus in the workplace. Employers are responsible for the safety of their workers on the job, and **OSHA** has comprehensive COVID-19 guidance to help them uphold their obligation.

"Regardless of the ultimate outcome of these proceedings, OSHA will do everything in its existing authority to hold businesses accountable for protecting workers, including under the COVID-19 National Emphasis Program and General Duty Clause."

Save the Date: This year's annual National Safety Stand-Down to Prevent Falls will be held May 2-6.

Fatalities caused by falls from elevation continue to be a leading cause of death for construction employees, accounting for 351 of the 1,008 construction fatalities recorded in 2020 (BLS data).

Those deaths were preventable.

The National Safety Stand-Down raises fall hazard awareness across the country in an effort to stop fall fatalities and injuries.

Visit the campaign webpage for updates. More information to follow in next month's newsletter.

important reminder **Injury Reporting**

US Department of Labor reminds specific employers to submit required 2021 injury, illness data by March 2, 2022

The U.S. Department of Labor's Occupational Safety and Health Administration reminds employers that the agency began collecting calendar year 2021 Form 300A data on Jan. 2, 2022. Employers must submit the form electronically by March 2, 2022.

Electronic submissions are required by establishments with 250 or more employees currently required to keep OSHA injury and illness records, and establishments with 20-249 employees classified in specific industries with historically high rates of occupational injuries and illnesses.

Visit the Injury Tracking Application Electronic Submission of Injury and Illness Records to OSHA for more information and a link to the Injury Tracking Application.

Spanish version available.

FEB2022 NEWSLETTER CARRIE: 720-203-4948 JEREMY: 720-203-6325 Page 7 MJS Legacy Safety Consulting Services LLC FAX: 855-966-8106 www.mjssafety.com January 10, 2022

Refusing to Try is the Worst Choice for Employers Facing OSHA's COVID-19 Emergency Standard

The Supreme Court has not yet ruled on the **OSHA Emergency Temporary Standard** but the standard is currently in effect. Lawyers suggest that the best way to draw a fine while the case is being litigated is to refuse to try and comply.

The **Supreme Court** has not yet ruled after hearing oral arguments on the **Occupational Safety & Health Administration's COVID-19 Emergency Temporary Standard** recently, but the standard is currently in effect. The first deadline was January 10.

The high court returned early from its winter break for the unusual hearing as <u>COVID-19</u> infection rates set a pace to triple previous records.

The Society for Human Resource Management spoke with Robert Duston, an attorney with Saul Ewing Arnstein & Lehr in Washington, D.C., who said that as of January 10, employers of 100 or more must have policies in place, enforce masking requirements and comply with other obligations. Employers that choose to offer employees the option of testing don't need to start that until Feb. 9.

If the **Supreme Court** does not block the **Emergency Temporary Standard** (*ETS*), employers who have not started to implement some of the hardest parts of the directive – developing a secure record of all employees' vaccination status – leave themselves open to complaints and investigations.

According to **SHRM.org**, given the scope of those covered by the rule, relative to **OSHA's** enforcement capacity, "**Duston** thinks **OSHA** will likely consider an employer's good-faith efforts to comply, and he said that covered employers are unlikely to see many citations in the next month unless they simply refuse to comply."

The ETS requires workers at companies with 100 or more employees to be fully vaccinated against COVID-19 or submit to weekly coronavirus tests. As of January 10,

unvaccinated employees at large companies are required to wear masks at work. Testing requirements and potential fines for employers don't kick in until Feb. 9.

OSHA estimates the **ETS** could save more than 6,500 lives and prevent over 250,000 hospitalizations in the six months that it would be in effect.

Human Resources Director Magazine reports that Bob Nichols, a Houston-based partner at international law firm Bracewell LLP, who has represented employers in matters pending with government agencies for more than 30 years, suggests that employers should take steps now to comply with the standard. "If you don't have the appropriate policy in place or unvaccinated employees wearing face coverings, you face potential fines and citations from OSHA," Nichols says.

"The **Supreme Court** doesn't appear to be taking on the merits of the case. Rather, they're determining whether they should put the rule on hold while it's being litigated," Nichols says.

Even if the **Supreme Court** allows the standard to go forward, underlying litigation is expected to continue. "However, the rule will likely be around long enough where the Biden administration will get its intended effect, anyway," Nichols says. "The real winner is who wins this **Supreme Court** fight."

If the **Supreme Court** blocks the **ETS**, **OSHA** will continue to issue guidance and citations for employers who fail to implement health and safety measures related to **COVID-19**. For example, **OSHA** already requires employers to maintain proper cleaning procedures and follow isolation and quarantine guidelines. And individual state **OSHA** plans will continue to enforce **COVID-19** standards within their jurisdictions.

MJS Legacy Safety Consulting Services LLC FAX: 855-966-8106 www.mjssafety.com

OSHA Penalties Increase

On Jan. 16, **OSHA** civil penalties increased based on 2022 cost-of-living adjustments.

Below are the maximum penalty amounts, with the annual adjustment for inflation, that may be assessed after Jan. 15, 2022. (See OSHA Memo, Jan 13, 2022).

2022 Penalty Adjustments

Type of Violation Penalty

Serious

Other-Than-Serious

Posting Requirements \$14,502 per violation

Failure to Abate \$14,502 per day beyond the abatement date

Willful or Repeated \$145,027 per violation

State Plan States

States that operate their own <u>Occupational Safety and Health Plans</u> are required to adopt maximum penalty levels that are at least as effective as **Federal OSHA's**.

UPDATE... Statement on the Status of the OSHA COVID-19Vaccination and Testing ETS

The U.S. Department of Labor's Occupational Safety and Health Administration is <u>withdrawing</u> the <u>vaccination and testing emergency</u> temporary standard issued on Nov. 5, 2021, to protect unvaccinated employees of large employers with 100 or more employees from workplace exposure to coronavirus. The <u>withdrawal</u> is <u>effective January 26, 2022</u>.

Although **OSHA** is withdrawing the vaccination and testing ETS as an enforceable emergency temporary standard, the agency is not withdrawing the ETS as a proposed rule. The agency is prioritizing its resources to focus on finalizing a permanent <u>COVID-19 Healthcare</u> Standard.

OSHA strongly encourages vaccination of workers against the continuing dangers posed by COVID-19 in the workplace.

Find information on the COVID-19 Healthcare ETS or on Coronavirus Disease (COVID-19).

Closing the Door on Asbestos Usage Loopholes

Many industries once used asbestos in a wide range of products, from insulation to fire retardants. It is now understood that exposure to this dangerous mineral can lead to fatal diseases, such as mesothelioma and lung cancer.

In this context, **public health advocates** and **environmental groups** keep insisting on the **fact** that the **Environmental Protection Agency** (*EPA*) still needs to **close a couple of loopholes** that continue to **allow asbestos** to find its way into **people's lungs**.

Asbestos exposure and the risk of cancer

Constructors and manufacturers have used asbestos since the industrial revolution to insulate buildings and ships. The mineral was also used to make ceiling and floor tiles, car brake and clutch parts, roofing shingles, textiles, and various other items.

During the early twentieth century, mounting data suggested that breathing asbestos led to lung scarring. Asbestos fibers breathed in can stick to mucus in the throat, windpipe, or the lungs' breathing tubes. Some fibers reach the lungs' small airways' ends or enter the lung and chest wall's outer layer. These fibers irritating lung and pleural cells can cause mesothelioma and lung cancer.

As asbestos-related mesothelioma and lung cancer became better known in the mid-1950s, authorities implemented measures to limit exposure, including laws prohibiting its use in construction materials and introducing exposure standards. The Toxic Substances Control Act (TSCA) from 1976 provided the EPA the authority to position restrictions on chemicals like asbestos.

The deadly toll of asbestos is still high

Asbestos imports and usage decreased significantly in the second half of the twentieth century, and alternative insulation materials have been discovered. As a direct consequence, asbestos exposure has fallen dramatically. Asbestos, however, is still used in some items and can be found in older buildings, water pipelines, and other places.

In comparison, since 2005, the European Union has prohibited asbestos use, albeit the restriction did not mandate the removal of asbestos that had already been installed. In other nations, however, asbestos is still widely used.

It's estimated that <u>more than 40,000 American workers die each year</u> from asbestos exposure, and thousands more suffer from severe lung diseases, facing a lifetime of pain; yet asbestos is not banned.

People can still be exposed to asbestos in the workplace, even though its use has decreased. Consumer and automobile products, cosmetics, toys, and construction materials can all still contain asbestos.

The EPA hasn't put an outright ban on asbestos in place

Although making some progress in banning asbestos, the US still hasn't fully regulated the use of this dangerous mineral.

When the **last asbestos mine** closed in **2002**, asbestos mining was **outlawed**. Because **asbestos mining** is no **longer permitted** in the United States, **all asbestos** must now be **imported**.

It is **still permissible** to import and **use small amounts** of asbestos. Due to the **lack of a comprehensive ban,** several products **can still legally contain** up to **1% asbestos**.

Sheet gaskets, aftermarket automobile brakes, brake

blocks, other gaskets, and friction goods are asbestos imports. The US imported twice as much raw asbestos in 2018 as it did in 2017 to support the manufacture of chlorine and caustic soda at 15 chemical

plants that are outliers in their sector for failing to convert to cost-effective and safe non-asbestos technology. In 2019, the chlor-alkali industry used almost 100 metric tons of raw asbestos imported into the US.

In 2019, the EPA issued a new regulation intended to make it more challenging to domestically manufacture, import, or sell products made with asbestos.

The **rule improved** the **EPA's** authority to **examine** and prohibit the **use of a broad list** of **asbestos products** that aren't **banned** but have been **abandoned** by the industry for **a long time**. The **decision was made** as part of a **legal process** that compels the **EPA** to examine its **asbestos regulations** under the **Toxic Substances Control Act** (*TSCA*).

Despite being stricter than the initial proposal — which was widely criticized — in 2018, the agency's decision still falls short of asbestos environmental groups and antiasbestos supporters' demands for a complete ban.

EPA ordered to revise TSCA CDR rule for asbestos

In 2020, a **federal court** in California ordered the **EPA** to **amend its Chemical Data Reporting** (*CDR*) rule, probably leading to a **mandatory requirement** for manufacturers and **processors to report** on their **imports**, uses, and **processing of asbestos**.

The court ruling was for two cases:

- Asbestos Disease Awareness Organization v. Wheeler, brought by several NGOs
- California v. USEPA, brought by several state attorneys general

Each suit appealed the EPA's denial of the Asbestos Disease Awareness Organization's citizens' petitions under TSCA section 21. The lawsuits asked the agency to amend the CDR or adopt a new rule supplementing the CDR and eliminating reporting exemptions naturally-occurring asbestos and imported articles that contain the substance.

FEB2022NEWSLETTER CARRIE: 720-203-4948 JEREMY: 720-203-6325 Page 10
MJS Legacy Safety Consulting Services LLC FAX: 855-966-8106 www.mjssafety.com

The ruling came after the court rejected the EPA's argument that voluntary reporting and data modeling was sufficient.

In February 2021, EPA asked a federal judge to walk back his order requiring the agency to revise its CDR rule to add asbestos reporting to the program. This request sparked criticism from environmentalists.

Consequently, on June 7, 2021, the EPA and the plaintiffs in the cases filed a stipulation and order informing the federal district court for the Northern District of California that they had settled.

The EPA agreed to start a regulatory process to require asbestos reporting under Section 8(a) in a way that solves the court's information-gathering shortcomings found in the December 2020 decision.

The **agency agreed** to sign a **proposed action** within **nine months** and a final step **within 18 months**. The court approved the **stipulation** and order the **same day**.

Loopholes need to be closed as soon as possible

The **2020 court decision** found that **loopholes** in the **CDR rule** prevented **EPA** from **collecting data** about **asbestos-containing articles**, asbestos impurities in **products**, and **asbestos processing**:

- Exemption for chemicals in articles. The EPA's asbestos risk evaluation document overlooked several goods known to contain asbestos, including cement products; felt; clothing; yarn and thread; cords and string; compressed asbestos fiber jointing paper; woven or knitted fabric; millboard; asbestos paper; crocidolite footwear; asbestos articles for use in civil aircraft; accessories and headgear; window caulking; wallboard and floor tiles; adhesive mastic; recycled asphalt shingle scrap; pads for ATVs and scooters; gaskets for motorcycles.
- Exemption for impurities. In the Asbestos Disease Awareness
 Organization petition, they cited research regarding the presence of asbestos contamination in makeup, crayons, and other talc-based children's toys, raising the possibility that thousands of talc-based consumer products that are asbestos-contaminated could be entering the US.
- The exclusion for processors. The CDR only requires manufacturers to submit reports. The court ruled that TSCA required processors to report their data to the EPA in an unambiguous manner. The court determined that the EPA's claim that it already collects all reasonably accessible information on processing from manufacturers via a legal form and voluntary information submissions is unfounded.

The **court ordered** the **EPA** to make **significant revisions** to its **CDR rule** regarding **asbestos reporting** to **remedy these vulnerabilities**.

In its decision, the court said the groups' original petition accurately described how little information the EPA has about the quantities of asbestos-containing products in the US chain of commerce and the overall consumer and occupational exposure for downstream uses of asbestos.

Even the agency's **Science Advisory Committee on Chemicals** (*SACC*) **questioned the adequacy** of the **risk evaluation**, the court said. The **court's opinion** makes it **evident** that the **EPA lacks basic information** on **asbestos exposure** and danger. It has no **plausible reason** for failing to **exercise** its **TSCA** reporting power to **close these glaring knowledge** gaps.

Asbestos protection and safety measures for workers

In the past, the EPA overlooked many sources of asbestos exposure and underestimated the toll the substance has on human health. When the EPA completes the second assessment related to uses of asbestos, it will expand its scope to address not only the safety of workers in the chemical, chlor-alkali, oil, construction, manufacturing, and automotive industry, as it resulted from the risk assessment from 30 December 2020, but also:

- Legacy uses (asbestos used in construction or manufacturing and still in place in existing buildings, factories, and other workplaces.)
- Take into account all six types of asbestos fibers (actinolite, amosite, anthophyllite, crocidolite, chrysotile, and tremolite.)
- Health risks of asbestos in talc products.
- Exposure of vulnerable subpopulations, such as workers who do not speak English
- Uses that were reasonably expected but not included in the first assessment.

Even though loopholes are soon to be closed, individual enterprises and employers still need to use asbestos handling best practices to ensure that their personnel are not exposed. OSHA has enacted laws to safeguard workers from harmful airborne particles. Building owners and construction employers must comply with the following requirements:

- Conduct air sampling to determine the amounts of asbestos in the air and discuss the results with their staff.
- Use respiratory protection such as HEPA (highefficiency particulate air) respiratory masks and vacuums if necessary.
- Monitor and examine individuals working in an asbestos-contaminated environment should be monitored and examined.

Under the <u>EPA's Clean Air Act</u>, **employers must** also **follow certain procedures**. Before repair or **demolition**, **for example:**

- Worksites must be thoroughly assessed.
- If asbestos-containing materials are detected, the owner or operator of the renovation must notify the appropriate state agency.
- Contractors must produce a plan for removing the dangerous items.

The **EPA** agreed to complete the second assessment by Dec. 1, 2024.

What You Need to Know About the Recently Revised Full-Body Harness Standard

Full-body harnesses are critical elements of effective fall protection systems. Workers must understand how to properly wear and use full-body harnesses when operating at height. A properly fitted and properly worn full-body harness can help prevent serious injury or death when used correctly on the job.

The recently updated <u>ANSI/ASSP</u> <u>Z359.11-2021</u> standard establishes requirements for the performance, design, marking, qualification, instruction, training, test methods, inspection use, maintenance and removal from service of full-body harnesses.

"The main purpose of Z359.11 is to act as a standard to drive best-in-class harnesses through rigorous design and test requirements," says Z359.11 subcommittee chair Rob Willis, "in addition to having requirements for manufacturers to create an ANSI-approved full-body harness."

Z359.11 defines a full-body harness as **"a body support designed** to contain the **torso and distribute** the fall **arrest forces** over at **least the upper thighs,** pelvis, chest and **shoulders."**

"It's the **piece of PPE** that connects the **user** to the **entire fall protection system** and is the **most personal piece** of PPE," Willis explains.

This **update to Z359.11** includes **revisions and new requirements**, including:

- A modified, headfirst, dynamic test procedure
- New stretch-out requirements for frontal connections
- Alternative fall arrest indicator testing and new label requirements
- Allowance for harnesses with integrated energy absorbers
- Changes to labeling requirements

In addition, **Z359.11 now requires** harness **label packs** to have **pictograms showing** the **approved usage** of **different connections** and **diagrams explaining** the difference **between deployed** and **non-deployed** visual **load indicators.**

Harnesses can also now be ANSI compliant when they have an integral (permanently attached) energy absorber on the back D-ring. The revisions to test procedures improve the safety of lab workers and allow for innovation in design for harnesses that use frontal connections.

"Z359.11 will give you a level of confidence that when you buy an ANSI-rated harness, it has certain design requirements and has gone through very rigorous testing," Willis says. "It provides good insight into what goes into harness designs and helps you understand the factors of safety built into these harnesses."

If you use **full-body harnesses** on your **work sites**, Willis says to **remember the two Fs** — **<u>function</u>** and **<u>fit</u>**. These **two elements** are essential to **ensuring that workers** have the **right harness** for their **task** and that the **harness fits** them **properly**.

"Safety professionals and end users need to think about the application where the harness will be used," Willis explains. "There are many different applications that have different types of harnesses, so it's important to realize that it's not just one harness for all types of work."

Specific full-body harnesses are designed for different working environments. For example, confined space harnesses should be designed and constructed so that, in the event of a rescue, the rescue subject is securely held and suspended during the rescue process.

Harnesses used in welding operations are different, with back D-rings serving as the main fall arrest attachment points. Willis says you may want to partner with harness manufacturers to find the right harnesses for your applications.

"There's a tool for every job and harnesses are no different," Willis continues. "The reason the application is important is that sometimes the application will dictate part of the harness design."

Once you have the appropriate harnesses for your work applications, you must ensure that those harnesses fit workers properly. Issues can arise from improperly fitted harnesses and create hazards.

"If I had one piece of advice that would make the most impact across the industry, it would be to ensure that your team has been properly fitted for a harness and that they know how to don one," he explains. "If someone is uncomfortable in their PPE, they are less likely to use it and they will be unproductive. More critically, an improperly worn harness may not work as intended in a fall event."

If a harness is not worn properly, webbing could cinch up in the event of a fall and cause bodily harm. Harnesses that aren't properly adjusted can cause the webbing to loosen, making the user uncomfortable and causing personal fall limiters or self-retracting devices to fall further down a user's back.

Willis notes that full-body harness manufacturers typically have sizing charts for initial guidance on fitting based on a worker's height and weight. He encourages end users to try on multiple harnesses before work begins to ensure the best and most comfortable fit.

Reminder - Revised Federal Drug Testing Custody and Control Form Mandatory

► As of <u>August 30, 2021</u>, DOT-regulated employers and their service agents [collectors, laboratories, Medical Review Officers (*MRO*)] must use the 'revised CCF'. <

Learn more about what this means for DOT drug testing.

January 13, 2022

New OSHA Information Confirms That Most Solo Truck Drivers Would Not Be Subject to the COVID-19 Vaccine-Or-Test Mandate

The Occupational Safety and Health Administration has officially addressed the issue of whether truck drivers are subject to its controversial COVID-19 vaccine-or-test emergency rule.

That rule, which is under review by the Supreme Court, requires companies with more than 100 employees to ensure workers are vaccinated against COVID-19. As an alternative they may implement a weekly testing requirement and require face masks of unvaccinated employees. Either one would be a daunting task when dealing with truck drivers.

In an **updated entry** to the **frequently asked questions** about the **Emergency Temporary Standard** (*ETS*) in its website, **OSHA said:**

"There is no specific exemption from the standard's requirements for truck drivers. However, paragraph (b)(3) provides that, even where the standard applies to a particular employer, its requirements do not apply to employees 'who do not report to a workplace where other individuals such as coworkers or customers are present' or employees 'who work exclusively outdoors.

Therefore, the requirements of the ETS do not apply to truck drivers who do not occupy vehicles with other individuals as part of their work duties. Additionally, the requirements of the ETS do not apply to truck drivers who encounter other individuals exclusively in outdoor environments."

In an email to members, the American Trucking Associations said, "we believe this guidance is still too narrow and fails to fully address our concerns as it relates to team drivers and other segments of our workforce."

The FAQ says the requirements do apply to "truck drivers who work in teams (e.g., two people in a truck cab) or who must routinely enter buildings where other people are present."

Drivers who **only occasionally go indoors** where other people **may be present**, such as using a **multistall bathroom** or entering an **administrative office** only to **drop off paperwork**, would still be exempted, **OSHA** said, as long as **time spent indoors** is **brief**.

The FAQ also makes clear that even when the requirements do not apply to specific truck drivers, those drivers are still counted for purposes of the 100-employee threshold.

Following the publication of the ETS, ATA said, Labor Secretary Martin Walsh indicated in public statements that most drivers meet the criteria to be exempt from the vax-or-test mandate for employers with more than 100 employees. "We sought written confirmation from the agency on this matter as well as expansion of the exemption toward other trucking industry workers."

FMCSA to Issue More Warning Letters for Unsafe Driving BASIC

The Federal Motor Carrier Safety Administration recently announced it will begin issuing more warning letters to motor carriers for Unsafe Driving BASIC results.

If you've gotten an unexpected warning letter from the Federal Motor Carrier Safety

Administration based on your Unsafe Driving BASIC percentiles recently, that's no accident.

The FMCSA made something of an under-reported change with its November CSA Safety Measurement System update. The agency made it considerably more likely that carriers would receive such warning letters -- generally an official notice that a carrier is at risk for further intervention (focused audits or compliance reviews) without percentile improvement.

Unsafe Driving is one of the seven Behavior Analysis and Safety Improvement Categories (BASICs) in FMCSA's Compliance, Safety, Accountability (CSA) program. FMCSA regards Unsafe Driving, along with Hours-of-Service Compliance and the Crash Indicator, as one of the three most critical BASICs.

Previously, carriers received warning letters when their scores for this BASIC reached a threshold of 50% for passenger carriers, 60% for hazardous materials carriers or 65% for all other carriers. Now <u>ALL</u> carriers, regardless of category, will receive a warning letter when their Unsafe Driving BASIC score is 50% or above. The agency explained its rationale for making the change as an attempt to help carriers "improve their safety performance and compliance sooner, and without further intervention."

FMCSA added that "percentile thresholds for prioritization are not changing." Carriers that have **BASICs** with an "Alert" symbol (gold triangle with an exclamation point) may still be prioritized for interventions or further monitoring, and warning-letter protocol isn't changed for other **BASIC** categories.

What is Unsafe Driving?

The Unsafe Driving BASIC calculates its score based on violations for unsafe on-road behaviors, including:

Textina

- Speeding
- Using a hand-held cell phone
- Reckless driving
- Failure to wear seat belts
- Improper lane change

Inattention

FMCSA clearly noted the recent National Highway Traffic Safety Administration (NHTSA) report on the dramatic rise in highway fatalities in the first half of 2021, and the 2021 Operation Safe Driver Week results from the Commercial Vehicle Safety Alliance, where 1) speeding, 2) failure to wear seat belts, and 3) failure to obey a traffic control device (running a stoplight or stop sign) were the top three violations among motor carriers. These violations all fall under the Unsafe Driving BASIC. FMCSA chose to alert more carriers to these safety issues before unsafe driving practices led to FMCSA intervention or worse, highway crashes.

What Should a Carrier Do Upon Receiving an FMCSA Warning Letter?

FMCSA sends warning letters to make motor carriers aware of deficiencies in safety performance. While the agency does not require carriers to respond in writing, the warning letters should trigger these carrier actions:

- Log onto the <u>CSA Safety Measurement System</u> (SMS) website and examine individual carrier CSA data or sign up as a member of <u>North American Transportation Association</u> for FREE safety Consulting.
- If there are any inaccuracies, challenge them through NTA's CDL Legal & DataQs;
- If non-preventable crashes are shown, use the FMCSA <u>Crash Preventability Determination Program</u> to have them removed from SMS calculations;
- Take careful note of the identified unsafe driving practices, and follow the steps to improving the Unsafe Driving BASIC score.

An FMCSA warning letter is a heads-up alert. More carriers will now receive warning letters about their Unsafe Driving BASIC scores. PAY ATTENTION. Actions carriers take in response can improve their Unsafe Driving BASIC score and their overall SMS score. Improved scores can preclude an FMCSA intervention and may help the motor carrier qualify for a better ISS score.

Most important, improved driving practices can prevent crashes and save lives on the highway.

Can Truck Drivers Use CBD? All You Need to Know About Cannabis,

HEMP, TESTING AND THE CLEARINGHOUSE

SOURCE: Dr. Alexander E. Underwood, KT Health Clinic Oct 4, 2021/Updated Oct 8, 2021

Across the country, more and more states are decriminalizing and outright legalizing marijuana, and meanwhile CBD, an extract of industrial hemp plants, a legal cousin to marijuana, has emerged as an effective treatment for everything from chronic pain to anxiety and sleep disorders.

But **despite the warming** national attitudes **toward the hemp plant** and **all its potential** derivatives, **CDL** holders **should approach** any **form of the substance** with **extreme caution**.

This <u>video</u> goes over what **drivers need to know** about **CBD**, **THC**, and keeping their **CDLs** – the landscape for **hemp/cannabis-derived products** has only gotten **more chaotic**, and murky in **terms of legality**.

A barrage of consumer products have swept through gas stations and truck stops across the country. Recently, savvy businesspeople have started selling so-called *Delta-8* and *Delta-10 THC*, or concentrated THC derived from fully legal hemp plants.

These products exploit the federal loophole that deems industrial hemp byproducts legal but plants grown for THC illegal. While these products remain legal, for now, they too will cause a <u>failed drug test</u> as the <u>Delta-8</u> and <u>Delta-10</u> compounds produce the <u>same metabolites</u> as <u>Delta-9</u>, plain-old <u>THC-bearing marijuana</u>, the kind that's <u>federally illegal</u>.

Amid the madness in the market for cannabis products and the ample confusion, an untold number of truckers have had their careers sidelined due to positive drug tests for THC.

From January 6, 2020 to June 1, 2021, 80,098 urine drug tests administered under the mandatory federal program for CDL drivers came back positive. More than half of those tests found marijuana.

The video tracks the legality of different products and states the official DOT position on CBD. Learn what you need to know about the intersection of marijuana, CBD, and trucking law.

FMCSA Updates Vision Standard for Certain Truck Drivers

The Federal Motor Carrier Safety Administration has published a final rule that, when it takes effect March 22, will allow truck drivers who do not satisfy certain vision requirements with one eye or the other to still be physically qualified to drive a truck without an exemption.

The **new rule applies** to drivers who **do not satisfy**, with their **worse eye**, either the **existing distant visual acuity standard** with **corrective lenses** or the **field of vision standard**, or **both**.

Currently, these **drivers cannot operate** in **interstate commerce** without an **exemption** from **FMCSA**. The new alternative **vision standard replaces** the current **vision exemption program** as the **basis** for determining the **physical qualification** of these **drivers**.

Drivers who **physically qualify** under the **new alternative standard** for the **first time** will be **required** to complete a **road test administered** by their **employer** before **driving interstate.**

Drivers are exempt from the road test requirement if they have three years of intrastate or exempted interstate trucking

experience with the vision deficiency, hold a valid federal vision exemption, or are medically certified under the previously administered vision waiver study program.

Before being medically certified under the new alternative vision standard, a driver must have a vision evaluation conducted by an ophthalmologist or optometrist. Then, a medical examiner performs a physical exam and determines whether the driver meets the alternative vision standard, as well as FMCSA's other physical qualification standards.

To be physically qualified, a driver must have at least 20/40 vision in the better eye and a field of vision of at least 70 degrees in the horizontal meridian, be able to recognize the colors of traffic signals, have a stable vision deficiency, and have had sufficient time pass since the vision deficiency became stable to adapt to and compensate for the change in vision.

FEB2022NEWSLETTER CARRIE: 720-203-4948 JEREMY: 720-203-6325 Page 15

How to Confront the Post-Crash Litigation Threat

Start at the Scene of the Accident

Holding onto your humanity in the hectic, litigious, fear-inspiring postcrash environment is a tall order, yet that basic humanity is an owner-op's first weapon against aggressive litigation at the scene of any accident, however minor. That's in addition to a bevy of time-worn tactics suggested by defense counsel and insurance companies with long experience fighting back against aggressive claimants and their attorneys.

If you haven't experienced such litigation before, there's evidence to suggest it could well reach your business' doorstep at some point in your career.

Ted Perryman is a **St. Louis-based defense attorney** frequently representing **trucking companies** in **crash cases**. "One of the **things** you see about **50% of the time**" immediately after an **on-highway incident**, he said, is the "first thing the truck driver does is call [his/her] **company**." The driver does that **before dialing 911**, before even "**checking on the other folks** involved in the **crash**."

Sentry Insurance claims director Larry Harlow's seen the phenomenon, too. "If the driver just sits in his truck" without checking on/engaging with other parties and/or potential witnesses on the scene, "you can imagine how that looks to a jury" months/years later at trial.

It's understandable a truck driver at the scene of an accident is "nervous, scared, worried about their job," Perryman added. He urged trucking company owners to create supportive environments to help reduce the fear involved in post-accident chaos. No matter who's at fault in the crash, "we need to provide the driver a great deal of support" initially. The driver "is our first person on the scene and the best at [initial] investigation."

Use a camera if you carry one on the truck – your smartphone is likely perfectly suited to the task – and capture photos of the final resting place of all vehicles, and any physical damage to the roadway. In highway-crossover type cases, guardrail damage and tire tracks in the median, too.

"If there are witnesses available," Perryman said, it's helpful to gather names and contact information. As a defense attorney, he feels it can be "important for us to get to the witness first – sometimes the story changes, otherwise."

In your efforts to be helpful and understanding with other parties involved in the crash and with witnesses on-scene, however, don't forget the threat of litigation that could rear its head. As Interstate Trucker firm President and attorney Brad Klepper has stated about accident-scene information gathering, "Always keep in mind your own legal protection. Part of that is being careful what you volunteer at the scene."

If you're hauling leased to or employed by a motor carrier, that carrier's safety department or lead rep will be your go-to for post-accident procedures, Klepper noted. "You may be excited. You may be scared. But the safety department's job is to handle accidents, so follow their instructions."

For independents with their own authority, your insurance company may well be your best source of support. Harlow notes his adjusters and/or investigative teams don't get to the scene of every crash themselves, but it's not unheard-of. Once the scene is secure in terms of checking on any involved parties, a call to the insurer makes sense.

"If the insured calls and they're still on the scene," he said, "we can patch that call through directly to one of our adjusters to guide the insured through documenting necessary evidence."

Backing up the front lines

For operators on-scene, communication is important for appropriate support, Harlow said. It's also not uncommon for Sentry to send out an independent adjuster to the scene to help guide a driver, and ultimately his employers back at the office, through the process. "We find a lot with some of our small motor carriers that they don't have an office staff that might readily pull needed documents – communication is a two-way street when we're looking for that information and we're trying to evaluate" responsibility and just how to proceed.

Oftentimes in cases where civil litigation is in play, it's common for Harlow and company to see a 10-page letter from a plaintiff's attorney demanding the motor carrier preserve documents and records. Don't have the logbook records from the day of the crash? Plaintiffs' attorneys can "make an argument that you spoiled evidence, and that again gets problematic."

That early call to your insurer or safety department, as the case may be, can help ensure expectations of document preservation are met. Dashcam evidence can be key in terms of showing the moments of the crash.

FEB2022NEWSLETTER CARRIE: 720-203-4948 JEREMY: 720-203-6325 Page 16
MJS Legacy Safety Consulting Services LLC FAX: 855-966-8106 www.mjssafety.com

"A video of an accident that clearly shows somebody else was the one changing lanes can go a long way" toward arguing a driver's/carrier's case, Harlow said. "Even a bad video," one that shows a measure of responsibility for the crash outcome, "keeps us from going down the path of trying to prove a liability argument that will end up failing and alienating a jury. If we know liability is reasonably clear up front," it's easier for insurers to take the right path, whether settling the case or pursuing a court victory.

Preservation of data can extend beyond the data that you control, too. For defense attorney Perryman, it will include data downloads from the claimants' vehicles as well. "We want to preserve all that if we can."

Timely **reporting of claims** to the **insurer** in any **incident** can also provide other **evidence dividends** that might **not be obvious**. Security **cameras** at businesses **in the area** may have **captured the crash** as it happens, for instance, as Harlow **pointed out**. Such cameras **don't often preserve** every bit of **footage** they capture **indefinitely**. Getting to it **quickly** can make a **big difference** in a case.

"A gas station close by is a prime example," Harlow added. "We can send somebody out there – if nothing else, they get a copy of it on their phone, anything to get that information as soon as possible."

Police body cameras that may have been in use on-scene are valuable evidence, too, said Perryman, who noted a case he'd seen more than once where his client's driver noted "the plaintiff was walking around the car and nothing was wrong with him," yet injuries were claimed. "If police had a body camera on, there's a possibility there" to disprove those claims.

Your own truck's dashcam can be a similar source. Regular readers of Overdrive may recall the story of a trucking company's safety director's successful navigation of the Federal Motor Carrier Safety Administration's DataQs system to challenge a crash that was deemed a tow-away crash and thus included on the safety director's CSA Safety Measurement System profile. The dashcam in the truck, however, had captured a police officer driving the passenger vehicle involved in the crash out of an intersection, clearly exhibiting that the vehicle was in fact drivable.

Don't be afraid to look for evidence in surprising places, either, said attorney Perryman. If he gets quick notice of a crash from one of his clients, "within 24 hours," he said, "I'll do a social media search on the people involved. You might get witness information from their relatives." He referenced drivers who'd taken YouTube videos in the aftermath of a 40-50-vehicle pileup in Wyoming. "We could almost re-create the accident from the videos. My client was one of the last ones in and hit the claimant vehicle," yet "the claimant vehicle had been in three crashes prior to us."

Before he'd located the wealth of video of the scene and the last parts of the crash as it happened, it had "looked like we were the only one."

The many mistakes carriers and operators make

As Harlow suggested above, small carriers can do themselves a favor in the back office in preparation for the worst when it comes to post-crash litigation. Carriers' vulnerabilities extend well beyond the crash scene when it comes to effective operator support.

DialVan Safety Director Sergio Hernandez also works on a part-time, as-needed basis as a service provider to smaller motor carriers in his area, Laredo, Texas. He conducts mock audits of those businesses, carriers of sizes anywhere from 1 to around 30 trucks, he said. "There are thousands of them here in Laredo. The majority of all of them fail miserably, since they have no safety program" in place.

Plaintiffs' attorneys know this all too well, Hernandez said. "We are their bread and butter."

Attorney Perryman called absolutely "amazing the extent that plaintiffs' lawyers go through carriers' driver qualification files with fine-tooth combs. To us, we look at that being on the compliance side" of the management equation, something maintained merely to check a box for a federal or state auditor. Yet Perryman urged carriers to look at it as risk-management, too.

"Plaintiffs' lawyers are 100 times worse than DOT officers are at making sure the qualification files are up-to-date and correct," he said.

Perryman was speaking in June of 2021, and the prior week he'd been involved in a long deposition around a crash case where inconsistencies in the driver's qualification file reared their head. The driver had filled out an online initial application for employment at the carrier where he said "his license has never been suspended," Perryman noted. Yet on the paper application he filled out when he was actually physically present at the company he'd said the opposite, "and both were in the file — there was no documentation that anybody had ever talked to him" about the discrepancy.

There was no suspension noted on his Motor Vehicle Record, and it turned out a move from Pennsylvania to Louisiana and a lapse in the CDL had been the reason the driver had indicated a suspension.

FEB2022NEWSLETTER CARRIE: 720-203-4948 JEREMY: 720-203-6325 Page 17
MJS Legacy Safety Consulting Services LLC FAX: 855-966-8106 www.mjssafety.com

"Pull that driver qualification file out right after the accident," Perryman advised. "If there are inconsistencies there, we can address that up front. No matter how big your size" as a motor carrier, there's always bound to be "something in the paperwork that's just not quite right."

In **prior reporting** from *CCJ*, Annette Sandberg, **CEO of TransSafe** and former **Federal Motor Carrier Safety Administration** boss, suggested that **carriers work** to get in **front of the narrative** post-crash.

"What you find with people on the defensive is they don't talk to the press. I don't know that that's always a good strategy," she said. "It doesn't hurt to make it look like you're aggressively investigating an accident. If you fire a driver, come out and say it. A lot of companies think they can hunker down and wait it out, but in this day and age, it never goes away. If your story isn't out there, nobody's going to hear it."

Additionally, **if you know your driver** is at **fault**, "jump on it and **deal with it early**," she said. "Don't **force them** to take you **to court.**"

Don't let your **cellphone be a liability**, either. "**Cell phones** are killing me on these **accidents**" in efforts to **defend truckers** from responsibility, said Perryman. "If a **driver is driving** 9 to 10 hours a day, **how many** hours is he or **she on the phone?** It's incredible the **number of hours**" he's seen. "**Six**, seven, eight **hours a day** on the phone. Chances are that having **drivers** <u>not</u> **on the phone** is **almost impossible.** They're all **legal**, but let's face it – there's a **belief out there** that if you're **talking on your phone** you're **distracted.**"

In front of a jury drawn from among the general population, as has been said time and time again, it's a problematic data point.

OOIDA Says Report on Drivers' Drug Use 'Meaningless'

OOIDA refutes report claiming operators' hard-drug use

A January 11 study from the Trucking Alliance and the University of Central Arkansas that alleged truck drivers use cocaine more than marijuana, and that the FMCSA Drug and Alcohol Clearinghouse should have booted an additional 60,000 or so drivers, has met with a sharp rebuttal from the Owner-Operator Independent Drivers Association.

The report circulated widely in trucking media as a piece of advocacy for the use of hair testing instead of simply urine testing. OOIDA took aim at the study's lack of peer-review and suggested that it was a piece of marketing rather than a true scientific publication.

Essentially, TA's study simply showed the results of its members' hair testing regime and compared it to Drug and Alcohol Clearinghouse urine testing results. Since hair testing picks up on hard drug use at a higher rate than urine testing, it then projected the results of the hair testing onto the larger urine-tested population

OOIDA raised many issues *Overdrive*'s reporting previously uncovered, calling the study "meaningless" because it failed to control for possible confounding factors. Additionally, OOIDA suggested that hair testing likely misses the point of drug testing entirely.

"Hair testing may indeed indicate the use of other drugs, but it's important to define 'current use'. Hair testing may show drug use from weeks or months previous to the test, but hair testing does not and cannot detect current use indicating that the driver is under the influence at the time of the test, "the report read. "This is the reason that hair testing cannot be used for after-accident testing with any accuracy. It takes a period of days or weeks before there are any detectable signs of drug use."

MSHA Stresses Power Haulage Safety

In 2022, the Mine Safety and Health Administration (MSHA) will continue to focus on powered haulage

safety. It is fair to say that powered haulage safety is one of – <u>if not THE</u> – highest priority for MSHA. Out of 36 fatalities reported by MSHA in 2021, 16 were power haulage accidents.

MSHA identified powered haulage safety as a priority back in 2017. In 2018, MSHA launched its Powered Haulage Safety Initiative. Since that time, MSHA has since devoted considerable resources to enforcement, education, training and outreach on powered haulage safety.

Learn about some of the safety practices and technologies that can help prevent powered haulage accidents at surface mines. Watch this informational video.

WINTER SAFETY CHECKLIST FOR SURFACE MINES

- ► Remove snow and ice from roads and walkways
- ► Drive slowly and keep space between vehicles
- ► Check highwalls, benches and roadways, especially after each rain, freeze or thaw
- ► Examine equipment for exhaust leaks
- ► Maintain equipment to operate safely in cold weather
- ► Apply sand or salt to walkways to improve traction
- ► Always wear your seatbelt
- ► Check for slip and trip hazards
- ► Wear footgear that grips

Click this link for a Winter Safety Checklist Poster

Safety Program for Surface Mobile Equipment

MSHA proposes to require that mine operators employing six or more miners develop a written safety program for mobile equipment and powered haulage equipment (except belt conveyors) used at surface mines and surface areas of underground mines. The written safety program would include actions mine operators would take to identify hazards and risks to reduce accidents, injuries, and fatalities related to surface mobile equipment. Under this proposal, mine operators would have flexibility to develop and implement a written safety program that would work best for their mining conditions and operations.

MSHA encourages mine operators with five or fewer miners to mitigate surface mobile equipment hazards at their mines to the greatest extent possible.

MSHA would provide assistance in the development and improvement of safety programs for mines employing five or fewer miners. Also, MSHA would encourage state grantees to focus on providing training to address hazards and risks involving surface mobile equipment in small mining operators.

This is one of **several actions MSHA** has taken to **reduce fatal** and **nonfatal injuries** involving **surface mobile equipment** used at mines and to **improve miner safety** and health.

The comment period closed on November 8, 2021; however, in response to a public request, MSHA re-opened the rulemaking record for public comments and held a virtual public hearing on the Agency's proposed rule. The virtual public hearing was held on January 11, 2022; and the comment period will close on February 11, 2022.

See more information about the hearing and extension of comment period.

How to leverage your safety skills for career opportunities

Few people are happy to be stuck in the same position for their entire careers. This isn't just a matter of having lofty ambitions. Progression is a route to supporting the lifestyle you want. You might feel you have ideas that could be innovative in your industry. Whatever your reason for pursuing better career opportunities, you need to present yourself as a good investment.

There are various ways you can approach this, but one of the most effective is by leaning into safety skills. It doesn't matter what area of industrial operations you want to work in. A background in safety can be instrumental in pushing you above the competition.

Let's go through a few of the things to bear in mind when leveraging your safety skills.

Where are the opportunities?

Your **first step** is to understand where the **potential opportunities** for leveraging your **safety skills lie.** This primarily **helps you to better direct** your efforts in a **relevant way.**

Some areas for further research can include:

Safety specializations

Perhaps the most obvious place to start is specialist safety careers. Many of these revolve around maintaining Occupational Health and Safety Administration (OSHA) regulations. There is a good job growth outlook particularly for the roles of occupational health and safety technician or specialist. Both positions involve analyzing and testing workplace conditions, with the latter role integral to designing programs to make improvements. The technician position generally doesn't require specific qualifications. This means you can usually gain entry by leveraging your on-the-job safety experience.

Management

Safety is increasingly becoming a part of industrial management positions. Your responsibilities aren't limited to maintaining efficient operations. You need to be able to achieve a productive environment that also achieves the highest possible safety standards. Your safety skills can be particularly valuable to businesses looking for warehouse, industry, or plant managers. Part of your focus is being able to demonstrate you know how to integrate safety standards while keeping the business profitable.

Human resources

Human resources (*HR*) positions can be a good direction for your safety knowledge. This isn't just a position in which you're hiring and firing people. Industrial businesses today are placing more focus on creating a holistic culture of safety throughout the company. As such, *HR* professionals have a responsibility to develop safety training programs. They'll also analyze whether these are effective. Your safety skills can be instrumental in making you a part of a company's efforts to build a positive environment. You can keep workers and the public safe while also helping the company achieve a successful trajectory.

Honing your application

Once you've **chosen your career goals** and directions, it's time to **start the application process.** Don't be put off from doing this **if you don't have the relevant** certifications in **place at the moment.** Make it **clear** in any **personal statements sections** that you are **dedicated to being** a positive **influencer in safety.** Often, businesses are **keen to engage** with candidates they **can see are open to** development.

MJS Legacy Safety Consulting Services LLC FAX: 855-966-8106 www.mjssafety.com

Your **resume** is the most important part of the initial application. Many companies today are using application tracking systems (*ATS*) in their recruitment, but these are no longer just keyword-pulling programs. As such, you must approach writing your resume as a skills and experience showcase. Be sure to give a good balance of your technical skills and your so-called soft skills. The latter are those which suggest leadership, communication, and teamwork. It's important not just to list your skills, particularly those related to safety. Give context to your abilities. Talk about how you've used your knowledge of safety procedures to make the workplace more positive. Outline achievements showing you've overcome certain safety challenges.

Importantly, don't just take a **scattershot approach** to your **applications**. You shouldn't be **issuing exactly the same resume** for every position. **Research the company** you're applying for and the **position they're offering**. Look into their **ethos or values** — especially in **respect of their safety** commitments. Tailor your **personal statements** on your resume and **applications to reflect** these values and **imperatives**.

Making your pitch

The interview process is not just one of the final gateways to a new safety job. You need to think about it as one of your best opportunities to express why your safety skills and your attitude help to make you the best possible candidate. In essence, you are pitching your value in the hope they'll invest in you.

Remember, most initial interviews today are being conducted remotely. This can be an uncomfortable experience for a lot of people, particularly if you haven't had much experience communicating professionally in this way. Your ability to nail a remote job interview can be helped by taking some careful and organized preparatory steps. These include setting up a clear and uncluttered space around you — consider this an expression of your approach to a safe workspace. Remember to dress professionally; this can certainly help your confidence, too. Wherever possible, do some practice runs with a colleague in the industry. They may be able to throw up some safety-related scenarios or ideas you hadn't considered.

One of your **primary points** of preparation here is your **contribution to the interview.** Asking the **right questions** can be important. Use this as a **chance to start discussions** demonstrating a **little more of your safety** knowledge. Ask about how the **business is planning** to approach the **security of new technology** coming down the **pipeline.** Start a **conversation** about their **safety-related business values.** This can **cement you in the minds** of the **interviewers** and also demonstrates **soft skills in communication** that businesses are **looking for** in their **environment**, health, and **safety professionals**.

Conclusion

Your safety skills and experiences can be instrumental in opening up new career opportunities. Take the time to explore the wide variety of roles safety abilities can contribute to. Take an approach to your resume and interviews leaning into not just your skills but their relevance to the individual business you're engaging with. With some careful consideration, you can make a positive start in a rewarding new path.
