

# Join Examples from the World Table

**1) Join two tables (Country and CountryLanguage): Lists all the country names and all the languages that are spoken in that country.**

```
select country.code, country.name, countrylanguage.language, countrylanguage.percentage
from country
inner join countrylanguage on
country.code = countrylanguage.countrycode;
```

**2) Join three tables (City, Country, and CountryLanguage) : Lists all the cities and their country code and country names and all the languages that are spoken in that country and the percentage of people in that country who speak a particular language.**

```
select city.name, country.code, country.name, countrylanguage.language, countrylanguage.percentage
from ((city
inner join country on city.countrycode = country.code)
inner join countryLanguage on
city.countrycode = countrylanguage.countrycode);
```
