

# The King of Comfort

*since 1949*

# Alde Heating system

*Clean, quiet and comfortable*

## Control panel with touch screen

All settings for the heating system are made on the control panel via the user-friendly menus on the touch screen. All key functions are available directly from the home page. Just like modern smart phones, the menu system is intuitive and easy to navigate.

## Boiler Alde Compact 3010

Alde Compact 3010 is the heart of the heating system. It produces heat for heating and domestic hot water. It is powered by LPG and electricity.

## Convectors and panel radiators

The convectors are placed along the outer walls where they produce heat and enclose the environment with a protective thermal barrier that prevents draughts.

Panel radiators can be supplied to fit spaces where it's difficult to fit normal convectors. e.g. in bathrooms.

## Heat booster with fan

The heat booster is used for fast and directed heating in e.g. wardrobes to dry wet clothes and shoes.

Available in several variants. The most powerful model is a compact heating unit consisting of an efficient heating coil with fan.

Ask your dealer if heat booster is fitted in your vehicle.

## Underfloor heating

We warmly recommend our underfloor heating to give a complete heating system with maximum comfort. It consists of pipe coils in the floor that are connected to the ordinary heating system.

Ask your dealer if underfloor heating is fitted in your vehicle.

## Frost control

Frost control is a drain/safety valve that automatically opens and drains the water heater when there is a risk of frost. Also acts as a safety valve against excessive water pressure and as a manual drain valve.

Ask your dealer if the Frost Control is fitted in your vehicle.

## Tank heating

Alde's tank heater protects your water and sewage tanks from frost damage. There are several installation options, for example, convectors that are installed between the tanks or a pipe circuit below the tanks, which is connected to the ordinary heating system.

Ask your dealer if tank heating is fitted in your vehicle.

## Heated towel rail

This practical towel rail offers high heat output. It gives you lovely, warm towels and extra heating in the toilet space.

Ask your dealer if heated towel rail is fitted in your vehicle.

## Hot water

The Alde Compact 3010 boiler has a built-in heater that ensures that you always have hot water in the shower and kitchen.

## For camper vans only

## Driver comfort

There are specially adapted convectors that are connected to Alde's heating system to give improved comfort in and around the driver and passenger seats. Other options include heating booster or fan convectors

## Heating mat

You and your passengers can enjoy warmth and comfort while you travel. The floor in the driver's cab is often a cold spot in winter. The Alde Heating mat prevents the cold penetrating into your vehicle and makes your floor warm and pleasant.

Ask your dealer if a heating mat is fitted in your vehicle

## Engine heat exchanger

A heat exchanger allows the vehicle's engine cooling system to be used for heating and the production of hot water. The heat can also be run in reverse and then acts as an engine heater.

Ask your dealer if an engine heat exchanger is fitted in your vehicle.

# Alde heating provides unsurpassed comfort

Our central heating system is a sophisticated, hydronic system that works on the same principle as a modern home. You get lovely, quiet warmth without really noticing it's on, regardless of the weather outside. Quality heating.

Convectors and radiators along the outer walls, and pipes in floor, heat up the air, which in turn heats up the furniture and surfaces. The rising, warm air forms a barrier in front of the windows, keeping the cold out.

The gentle and natural air currents spread through the whole interior, creating a pleasant environment with natural humidity. The entire advanced system is controlled simply and intuitively by the control panels touch screen.

## Alde a Swedish story

More than fifty years ago, our founder Alde Rask decided to build the ultimate heating for RV – and your valuable leisure time is as close to our heart now as it was then. Today, our hydronic systems are actually more sophisticated than in many homes.

Our entrepreneurial roots keep us focused on functionality, quality and reliability, which motivate us to produce heating systems and accessories that will make your RV more comfortable and hassle-free.

# Get more from your heating system with Alde Genuine Accessories

Much of our wide and steadily growing range of accessories can be retrofitted. You can usually do the job yourself.

Our original accessories have been developed by our own experts and adapted to function smoothly and safely in your vehicle. Take a closer look at the upgrade options contained in our accessories folder or go to [www.alde.us](http://www.alde.us)

## Download Alde's new service app for free

Having Alde's Service app on your smart phone and tablet gives you permanent easy access to information and help, no matter where you are on holiday. What's in the app:

- Information about the Alde heating system
- The way to the nearest Alde Service Center
- Manuals for your heating system
- Answers to the most frequently asked questions about Alde heating systems
- Accessories for your Alde heating system
