

Scorecards

One person must hole out for the score to each hole. Either a number or an X.

We don't want X's on a hole with a number. Either a number or an X.

If you pick up you need to put what you most likely would have, but it has to be the same or higher net score than the partner whose score you are using.

Never put two scores in a square! Just one whole number.

We need to do this for scoring purposes. When we enter scores we don't have time to figure out all the X's on the scorecard.

If you don't know how to do this then the only thing you put for the hole in question is a big X and no number.
