Background Information

The Earth's atmosphere is made up of several layers. The layer closest to the Earth's surface is the troposphere. It is here that most of the weather occurs. The next layer up is the stratosphere, which contains the ozone layer. Above that is the mesosphere, and the outermost layer is the thermosphere.

The atmosphere is important for many reasons. It helps to regulate the Earth's temperature, protecting it from extreme heat and cold. It also provides the oxygen that we need to breathe. Without the atmosphere, life as we know it would not be possible.

The atmosphere is also responsible for the greenhouse effect, which keeps the Earth warm enough to support life. Without the greenhouse effect, the Earth would be too cold for most plants and animals to survive.

Understanding the atmosphere is important for many reasons. It helps us to understand the weather and climate, and it allows us to predict future changes. It also helps us to protect the environment and to develop sustainable technologies.

Informational text card describing the rocket launch model.

Informational text block, possibly a checklist or description, with a small circular logo at the top left.

48th Fighter Wing
The 48th Fighter Wing is a United States Air Force fighter wing based at Hahn Air Force Base, Germany. It is the only active-duty fighter wing in the United States Air Force to be based in Europe. The wing is currently equipped with the F-16 Fighting Falcon. The wing's primary mission is to provide air support to the US Army and the US Marine Corps in the European theater. The wing is also responsible for the defense of the European continent. The wing's history dates back to World War II, when it was first activated as the 48th Fighter Group. The wing has since been reactivated several times, and it has played a significant role in the defense of the United States and its allies in Europe.
