

HYDROFARMING: A Lecture with Charlie Pendorf

On Saturday, August 4th, the Maritime Museum hosted a lecture with Charlie Pendorf on Hydrofarming.

Charlie Pendorf is the Founder and Chief Operations Officer for The Hydrofarm Inc., a small platform hydroponic operation focusing on the quality and efficiency of commercial lettuce production. This off-grid farm utilizes solar power, less than 10% of water that a traditional farm uses, and operates on a fraction of the land that would be expected for the volume produced.

In his lecture, Charlie discussed hydroponics and how this can be used at home.
