

HAWKER BEECHCRAFT 400XP

On board the Hawker 400XP, passengers will find a much larger cabin in comparison to other light jets, due to its unique shape – called “vertical squared-oval” by Hawker Beechcraft – and flat cabin floor. Travelers will take comfort in the option to make use of a sizeable private lavatory as well as a convenient galley section. Luggage located in the expanded rear baggage hold is easily accessible.

These attributes blend with the adaptability and low operating costs of similar light jets to offer passengers a safe and reliable flight directly to their destination of choice.
