

Our Magic Body Summer Camp

Who is this camp for? Budding physicians and scientists fascinated by health and the human body in elementary school that want a fun, hands-on first experience with our magic body.

Our young Scientists will be also designing unique Anatomy Doll models that will highlight and apply what is learned in each system by incorporating personal details.

In this camp our young scientists will be dissecting the wonders of the human body and zooming into different body systems using interactive lab procedures and tools.

Through the dissection of a frog our young scientists will dig deeper into the relationship between the body systems to understand how body systems help each other to get the job done.
