

6.5KW Diesel Generator (single phase) Small Trailer Mounted

This 6,500 watt single phase generator is diesel powered and mounted on a small 2 wheel trailer with a 2" hitch for easy towing. It has the convenience of a very low profile so it is easy to hide from view. It is an extremely quiet running unit powered by a Kubota diesel engine.

Power distribution to your event will only come from outlets on the front panel of the generator or by a 30 Distribution box with 8 Edison (standard) type outlets on it. 25' extension 30 amp cables are available for it. As an option 50 amp cables and distribution boxes can be connected to the e single phase outlet on the generator. We have two of these high quality, water cooled, quiet units.
