

## A LIST OF SPECIES FROM GLOVER'S REEF ATOLL, BELIZE

Compiled by Thomas Bright and Alex Tilley, February, 2013

This is a list of species known to reside in or migrate through the waters and islands of Glover's Reef Atoll, Belize. It was compiled from the sources listed at the end which include published accounts as well as unpublished notes, lists and personal observations.

We have proofed the scientific and common names against a variety of taxonomic data bases to rectify inconsistencies. Where synonyms in scientific names appeared, they were replaced with the currently accepted epithets. We have generally chosen the locally employed common names but have replaced some used in the sources with more widely recognized versions.

Except where otherwise noted, the higher taxonomy follows closely that adopted by the *World register of Marine Species*. Some placements may differ from those of other classification schemes in use (for example, the brown algae are placed in the kingdom Chromista, rather than Plantae). However, from the family level down, there should be no differences between conflicting taxonomies.

As careful as we have striven to be, there are certainly some errors herein. We request that the reader inform us of any. Most importantly, please report any new sightings so they may be included.
