A No Sweat

Effortless and exercise are two words tarely used in the same sentence. However, the \$34,880 Arasys III claims to build muscles with little or no movement required. Users consect pads to targeted muscles, which are then sent microcurrent electrical signals via the nerves. The signals cause involuntary movements that, according to the company, burn fat cells and increase the body's metabolic rate, allowing users to lose weight without even breaking a sweat.

Head To Toe Spa Treatments From Around the World If everyone enjoyed getting poked Nobel Prize winning research, amantha

If everyone enjoyed getting poked by needles or going under to knife, then looking young and radiant would be so much easier. Relax, there is no need for painful, invasive medical procedures to achieve and maintain a vibrant youthful appearance. There are new non-invasive face-lifts that don't require needles and have no side effects or down time. For starters, you can sculpt your facial features Nobel Prize winning research, Perfector achieves dramatic results for men and women through resonating biological signals that regenerate cells, building new muscle and skin tissue while promoting cell energy and collagen and elastin production.

with the Perfector **Regeneration Lift**. (www.arasysperfector. com) The Perfector enhances collagen and elastin production, sculpts and enhances the healing of problematic skin. Revolutionizing the way people experience and view cosmetic procedures, Perfector Arasys, U.K. introduced the Perfector with Cellular Resonance Nanotechnology as a healthy, relaxing alternative to chemical and invasive cosmetic procedures, restoring confidence, natural

beauty and youthfulness at any age. Based on technology from London University and

SPACE-AGE TREATMENTS

Latest in Fat Fighters!

Are you a medical professional and you don't know how to deal with visceral fat patients? Are you an Obstetric Gynecologist watching your patients become increasingly depressed as the excess pounds gained during pregnancy continue to accumulate on their waistline?

You've read the headlines; A recent study by the Harvard School of Public Health found that a startling two-thirds of Americans are overweight. Even more startling, is the finding that 28.7 percent of adult American men and 34.5 percent of American women were clinically obese. And these numbers will only get worse. America's problem with bulging waistlines has reached pandemic proportions according to federal health officials, who warn that obesity is becoming society's No. 1 killer - a top contender for type II diabetes, heart attack, stroke, maybe even a replacement knee or hip. But as doctors wrestle with this problem, we sought a more clever alternative: Gerry Pollock's high tech power device, the Arasys, developed in London University in 1994 and recently upgraded (2005) in Bi Centre Innova Science Park, a European Union funded research center. Pollock who is also a pioneer in Ultra Violet Light, built the Arasys on the basis of his expertise in co-inventing the first pacemaker. The pacemaker targets the smooth heart muscle transmitting electrical signals that can be customized in various complex programs to analyze the heartbeat and decide if the pacemaker should electrically stimulate the heart to contract. While the pacemaker is designed for the smooth heart muscle, Pollock's device, the Arasys, is designed for the nerve that contracts the skeletal muscle. Pollock invented the Arasys to treat Multiple Sclerosis and Muscle Atrophy, but the technology was imported into the USA as a result of its highspeed muscle building, instant inch loss, visceral fat reduction, and dramatic effects in tightening abdominal muscles after pregnancy.

All other devices that make similar claims to the Arasys are muscle stimulators. What this means is that they cause a depolarization of the skeletal muscle and result in a contraction that is powered by the limited ATP supply (cell energy) stored within the skeletal muscle. Unlike muscle stimulators, Arasys uses advanced MENS technology programmed into an intricate complex waveform composed with up to 1000 frequencies. The waveform is built to analyze, artificially increase and ultimately counteract what would be equivalent to resistance training. Arasys electronic mechanism is hand made to automatically resonate the rhythm of neuroby Xanya Sofra-Weiss, Ph.D

nal signals during strenuous exercise while the operator manually increases the flow of signal transmission. Pollock's waveform combines the calculated accuracy involved in hitting a moving target with the specificity necessary for a key to fit a particular lock. The Arasys waveform unlocks the biological process leading to the release of ATP at the nerve synapse along with a neurotransmitter called Acetycholine. ATP subsequently powers the muscle contraction. ATP involved in the neuronal process does not have the limitations it does during muscle stimulation that draws on the limited supply of ATP stored in the skeletal muscle. Additionally, a number of research studies (Cheng 1982, Santos et al 2004) indicate that MENS stimulation increases ATP up to 500%.

BEFORE

AFTER

3 TREATMENTS

Arasys effectiveness has been demonstrated by clinical studies that have compared Arasys with physical exercise over a number of variables including inch loss and body building (2004, 2005). Inch loss after Arasys treatments is reportedly significant with individuals suspected to have visceral fat (2004). Arasys Effortless Power Workout speeds up muscle building and inch loss at a fraction of the time needed at the gym. Results are equivalent to strenuous exercise and they last as long. There is no gym burnout since the Arasys procedure does not require glucose, which is normally utilized during physical exercise - an important benefit because the body burns the surrounding fat cells without decreasing glucose levels. This prevents significant build up of lactic acid. Arasys naturally increases metabolic rate to initiate weight loss, and is perfect for spot training to target trouble areas that cannot be conquered with standard exercise. The enhanced detoxification and blood circulation achieved during the Arasys treatment reduces the appearance of cellulite and leaves you with an overall sense of well-being. For more info on the Arasys, vist the website at: www.arasysperfector.com or call 1-866-25-YOUNG. For a free demo visit Booth #501 at the Anti-Aging Expo 2007.

BODY WORK NUDE MODEL, PHOTOGRAPHED BY IRVING PENN, VOIGUE, 1994,

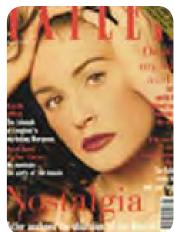

THE SKIN I LIVE IN

IF YOU'VE EVER witnessed ironers at a French laundry and heard the whooshing sounds their state-of-the-art steam machines make, that comes close to my experience of a cell-stimulation therapy called endermologie. For one week in Beveriy Hills, I spent two hours a day with aesthetician Rita Czech, having a futuristic-looking machine apply pressure all over in an effort to promote cell growth, increase metabolism, and sculpt the body. Patients wear bodysuits, and Czech guides a handheld suction brush attached to the machine over the body's surface. It feit as if I were being ironed (Czech, who discovered the therapy in a Paris hospital, calls it "mechanical Rolfing"), which sounds worse than the soothing procedure actually was. Funderwent another therapy called Arasys, which claims to boost circulation, burn fat cells, and detox by stimulating nerves—like working out without the gym (but don't think it can replace a healthy diet and exercise!). This was my version of spring cleaning, and at the end of each session. I indeed felt a lightness of being and was newly energized. Tom Ford noticed my glow over dinner at the Tower Bar. I happened to meet up with Natalie Cole on the flight back to New York. Cole, who is a Czech fan, told me, "I think I'm going to go back!" Agreed. *cellulitesolutionla.com*—ALT.

The Wave of the Future

Cellular resonance microcurrent technology is becoming one of the most successful non-invasive procedures in today's anti-aging industry.

t's a fact that most age-related health and beauty issues in Americans are largely induced by a combination of lifestyle, diet and environmental factors. As a result, America's "baby boomer" generation is spending millions of dollars each year on anti-aging creams, miracle dieta and injections, in an effort to maintain their physical health, fitness and beauty. Procedures such as liposuction, plastic surgery and injectibles are on the upswing, but so are healthier diets, fitness regimes and non-invasive procedures. According toa study by Medical Insight."60 million noninvasive aesthetic treatments per year will be performed in 2006. Nearly \$650 million was spent last year on equipment needed to carry out these treatments, and the market is expected to grow as much as 25 percent annually over the next five years." The anti-aging business is currently a \$50 billion dollar industry, and "medical spas" are on the rise across the country. According to Medical Insight, "There has been a significant increase in the number of medical professionals positioning to expand into the medical spa market, which should fuel growth in 2006, after the present educational curve is overcome."

Good communication is no longer relevant only to verbal communication there is a whole physiological conversation going on inside the human body. Through advanced modern technology we are now learning to speak the body's intricate language in order to become more proactive in the world of "anti-aging." Two cuttingedge procedures in today's modern antiaging technology that are seeing excellent results are the Perfector Face Lift and Arasys Inch Loss and Fitness technologies. Perfector's non-invasive face-lift is a cellular-resonance technology designed at London University in 1992, following studies that won the Nobel Prize for "listening into the private communications of cells." The Arasys III inch loss and body building system is a neuro-resonance technology invented by Gerry Pollock, the coinventor of the pacemaker. It was originally developed for multiple sclerosis and other muscle-wasting conditions.

Based on a systemic approach to antiaging through the use of microcurrent. these technologies offer a non-invasive healthy alternative that has proven to help slow the biological clock on a cellular level. Much like an automobile's battery needs to be charged, the human cells' electrical charge needs to be energized in order to work at their optimal performance. When healthier cells are generated, the body's overall performance is improved, due to better circulation and a substantial increase in the collagen and elastin levels, which are depleted during the aging process causing sagging and wrinkling of the skin.

Perfector and Arasys' technologies use microcurrent in a unique and innovative fashion. They introduce complex square and rectangular waveforms constructed out of up to 1,000 frequencies that intertwine to resonate the intricate language of the cellular and neuronal systems. The stability and ingenuity of the waveforms offer results that are more pronounced, as well as longer lasting when compared to most other microcurrent technologies on the market.

Although plastic surgery and injectibles are a popular solution for a "quick fix" of

aging skin, they do not have any positive effect on the skin's overall health and condition. Cellular resonance technology, on the other hand, has revealed an increase of elastin by 48 percent, blood circulation by 38 percent, collagen by 10 percent and ATP (cell energy) up to 500 percent. Many plastic surgeons, dermatologists and other medical doctors are now recognizing the need for the new "healthy" alternatives that are rising in the market as an additional way of attracting millions of new clients who are not interested in injections or surgery. The demand for non-invasive services are growing rapidly, as they tend to be less expensive and require less downtime.

Health and fitness are today's hot issues. Given the limited time that most people have to spend in the gym, Arasys offers a "no sweat effortless workout." Seventeen minutes on the Arasys is analogous to several hours of strenuous exercise. Unlike many EMS devices that target the muscle, Arasys targets the nerve in charge of the muscle offering a full contraction. Arasys offers substantial health benefits that include detoxification, increased oxygenation of organs and tissue, reduction of body fat and an increase in lean body mass and muscle building.

Modern science is continuously searching for the most progressive approach to noninvasive cosmetic procedures, embracing our society's interest in a more spiritual and technological approach to improving their looks and overall health. Is it possible we have finally discovered the "ultimate anti-aging solution?"

THE MUST HAVE FACIALS Before

the Oscars, Sharon Stone heads to Spa Radiance in San Francisco for a Perfector Face Lifting Treatment, also known as a knifeliess face lift Madorina, Gwyneth

and Victoria Beckham are fans of the Crystal Clear Oxygen facial, which rejuvenates and firms skin. A five-

Perfect results

he original Perfector Microcurrent system was liaunched in 1992 by Face and Body Perfector and was an inmediate success with its unique waveform toviding real anti-ageing programmes and a ion-surgical facelit reletively new to the UK at hat time.

When Face and Body Perfector Ltd ceased rading in 1998, the assets of the company vere acquired by Perfector Skincare Ltd, now hits fifth year of trading specifically to provide upport for existing customers and to market a reliv microcurrent system even more stvanced than the original, plus a range of fedicated conductive gets, ionisable collagen and skincare preparations.

Getting personal

Ay business background includes training it Harvard and London Business Schools and I am a Fellow of the institute of Janagement Consultants. During a 40-year samer in the cosmetics and beauty industry have worked with several of the major nome 600 LIK customers of Face and Body fertector and countless more internationally hait would samply have been left in the funch I we hadn't come along to provide ongoing support with training, products, marketing and technical back-up.

Voving forward

At Perfector Skincare we immediately started the development of a new microcurrent system, working closely with our associate (ays Electronics, which specialise in the nedical and sports injury field, supplying

controllers for equipment in intensive care units and traction and exercise machines. The oriel was to develop a unit that with the benefit of now and cheaper components would offer salons a quality preprogrammed machine that was afforciable and would produce first-class consistent results.

The end product was the

David Greenway, managing director of Perfector Skincare reports on providing a superior service by offering comprehensive after-sales support for a product that delivers real results

treatment has six programmes, which leafure a unique spiked wayeform for lymphatic dramage and a rectangular waveform for lifting. The combination has been shown to give it deep lift coupled with a smoothing of the skin and cell regeneration. The Punkss programme provides a deep cleansing and detaxitying flucial that has also been shown to help with riche and other skin disorders including pigmentation problems. The Pentector system self calibrates to ensure consistent conductivity.

Trained to perfection

As with all salon electrical equipment the importance of training should never be underestimated – we take it very seriously. Emma Holmas who heads up Perfector training support says. 'Training is normally conducted on customers' own premises. Training back-up also extends to colleges where lecturers are now required to provide microcument training is part of the curriculum for all full-time and NVQ level II courses. The Perfector Microcument system is the favourite of many colleges around the country including Birmingham. London College of Fashion, Basingstoku, Farohum, Famham and Bournemouth.

Perfector non-surgical face lift

The microcurrent works on all levels of the skin, soft issue and muscle fores. By increasing the local metabolism and re-educating the muscle fibres a lifting effect is produced. Pre-set programmes mean therapists can deliver consistent treatments to clients with no need for lengthy programming.

Purikiss lymphatic drainage

Using galvanic currents and the desincrustation gel, the Punkiss programme produces a chemical reaction that removes impurities and deep cleanses. Lymphatic drainage, oil-free lotion, booster serums and pressure point massage decongest the skin. Perfector detox gel is then applied using the pulsed microcurrent and the unique roller effects detoxify and improve skin drainage.

Training courses are designed to ensure that therapists understand all the theory of microcurrent and then progress to intensive practical work.⁴

Over the pond

Perfector Skincare has just receively been approved and certified by the FDA (Food and Drug Administration) in the United States and that side of the business is booming. We now export over 60 per cent of new machines outside of the UK.

Xanya Sofra-Weiss, PhD, is president of Forever Young Inc., Perfector's US distributor, She has diactorates in neurophysiology and

FOR MORE ON THE PERFECTOR, CONTACT: LISA VRANCKEN AT 561.400.2606

Dr. Xanya Sofra-Weiss: "We are proud to report that we have completed our research on Nanotechnology for the Perfector. During our clinical studies of using the nanoampere range we saw wrinkles disappearing in seconds, muscles lifting and the lift lasting for as long as a month after only one treatment. We also saw dramatic results with hyper pigmentations. Perfector technology has always been more advanced in terms of the clarity of its signal and the stability of its waveforms. But we've never seen the pervasive results we observed with nanotechnology, neither with the previous settings of the Perfector nor with any other cosmetic procedures."

Perfector Introduces Nanotechnology to Cosmetic Procedures

Q: Why nanotechnology?

Dr. Weiss: The importance of nantechnology that uses nanoamperes (one over a billion of an ampere) to resonate biological signals is immense. It has been known since 2001 (Nobel Prize in Physiology and Medicine) that biological signals are in the pico amperage range (one over a trillion of an ampere). Clinical studies in Ks Electronics and our UK and USA research departments have clearly shown that waveforms delivered in the nanoampere range (one billionth of an ampere) are significantly superior than waveforms delivered in the microcurrent range (one over a million) in building skin and muscle tissue and

restoring the skin's overall youthful freshness and glow. Results were significant in the p< 0.001 range for the 48 individuals who received the treatment with nanoamperes. **Q:** Was this a double bind study? Dr. Weiss: Yes our study was double bind and we used a within subjects design. Treatment with nano was significantly superior to treatment with microcurrent for all variables. The consistent superiority of using nanotechnology suggests that the discrepancy between the pico ampere biological signal and the microcurrent signal may be too great to adequately support and enhance the biological process of skin and muscle tissue building and overall skin rejuvenation. However, the nanoampere signal is much closer to the biological pico ampere signal and therefore resonates with biological signals more efficiently to enhance skin and muscle tissue building and overall skin rejuvenation.

Q: What is the importance of resonance?

Dr. Weiss: Resonance is like a key to a lock. Resonating a biological signal means communicating with the pico- electrically based language of the cells, their genes and proteins. The clarity of the signal in conducting such a communication is crucial

Research in Nanotechnology

Noise reduction in an electronic signal can be compared to the compromised sound emitted from a \$200 stereo versus the full sound coming out a \$6,000 stereo. There is an unquestionable difference in sound quality between the \$200 and \$6,000 stereo equipment. Imagine the same clarity of a signal in an electronic device designed to eliminate noise by automatically adjusting to different skin types and textures. This is accomplished by Perfector's computer sophisticated hardware and software that eliminate background noise and deliver a crystal clear signal that resonates with the body's natural regenerative and healing capacity.

New Tissue Building Lift

The best kept secret in Hollywood is turning into a buzzword ...

It's called the Perfector and it is based on the new Cellular Resonance Technology from London University.

Discovered by a number of A-list celebrities, it is now taking over dermatological facilities and medical spas. The system's eight scientifically based programs are designed to enhance systemic balance, a synonym for health. Its biologically resonating functions include oxygenation, detoxification, and cell energy restoration which builds tissue and ultimately promotes immune harmony. This triggers a chain of biological events that lead to a natural face lift, as well as improve cases of melasma, acne and rosacea.

On Safe Anti-aging
