

## CONTINENTAL DRIFT ASSESSMENT

1. The theory was proposed by .....
2. Initially there was a super continent called .....
3. This split into two , ..... and .....
4. The first evidence was the apparent ..... fit of the continents
5. This fit was better if the edge of the ..... was used instead of the coastline
6. Lack of fit can be explained by ..... or ..... on the coastlines
7. Fossils such as ..... and ..... are found on widely separated continents, Africa and South America
8. Present day plants and animals on ..... and ..... show many similarities
9. Similar rock types of similar ages are found on different continents and the ..... mountains in the east of North America and the ..... mountains in Scotland and Scandinavia were once a single mountain range
10. Evidence for an ice age, ..... and ..... are found on South America, Africa and even north of the equator in .....
11. Rocks such as ....., ..... and ..... that form at the equator or in the ..... are found in countries much nearer to the poles such as the .....
12. .... a mineral that forms in cooling magma aligns itself with the earths ..... , this is called .....
13. The ..... of the ..... crystals is determined by the ..... at which the rock forms
14. .... can use Palaeomagnetism to prove continental drift

PANGAEA	CORAL	COAL	INCLINATION	JIG SAW
