Gingerich Tree Farm Guarantee

Gingerich Tree Farm does everything possible to ensure that all of our customers receive a good healthy tree that is properly planted. Even so, there will be a very small percentage of trees which do not survive the transplant.

For these situations, we offer the following guarantee –

When our trees are planted while dormant, which is when the majority of our trees are planted, we guarantee them to leaf out the following spring. On conifer species, we guarantee them to put on new growth the following spring. If this happens the trees have survived the transplant and should thrive at their new location if given proper care by the homeowner or business that purchased them. Over 95% of the calls we receive each year regarding dead trees or trees doing poorly is due to lack of water. A transplanted tree loses a lot of roots in the process and they require WATER to survive. Refer to the “Tree Care Instruction Sheet” that we give to our customers and can also be found on our website. WE DO NOT REPLACE TREES THAT WERE NOT PROPERLY WATERED!

We will only replace a tree one time. If the replacement tree also does not survive, it is extremely unlikely that it was our fault but much more likely a situation involving the planting location. This rarely happens.

If you have an issue or concern with your tree(s), please bring it to our attention immediately. We do not offer any guarantee on trees that we do not plant since we have no control over how they were handled or planted.

Thank You!
