AMERICAN

SUPREME

American's Finest Bow

- Unexcelled Stability
- Ultimate in Limb Design
- Unequaled Accuracy
- Silken Smoothness

Proven over and over again, in the most exacting of competition, the "Cheetah Supreme" takes its rightful place at the top of all tournament bows. The "Supreme's" handsome wide stable limbs and stressed recurve offer speed and accuracy unmatched by competitive bows.

The exotic, imported hardwoods, hand-crafted by true artisans, make the "Supreme" not only a thing of beauty but a genuine pleasure to shoot.

AMARCO DE LUXE

The bow that has all of the qualities the particular archer has a right to demand are yours in the "DeLuxe." Wide comfortable hand grip with built-in thumb rest, graceful, highly efficient limbs with internal stability provide extra insurance for those "6 Golds." Hand crafting of the rare imported woods makes the "DeLuxe" stand out as a bow of bows.

HUNTER'S SPECIAL

- Time Proven Favorite
 - Power Packed
 - Full Working Recurve

The discriminating bowhunter will find the "Cheetah Special" the undisputed favorite for that big tournament that starts opening day of the hunting season.

As its name implies, the "Cheetah" is fast—quiet—smooth—and deadly. Short enough to get thru the bush with ease, yet long enough to provide the deadly accuracy so important on that big hunt. Unquestionably, the "Cheetah Special" will become your most trusted hunting companion.

** #7 Broadhead - 1.00 extra

You'll have the world's most efficient tournament arrows when you get American "Air-Flo" fletching combined with any of the three famous Easton aluminum shafts.

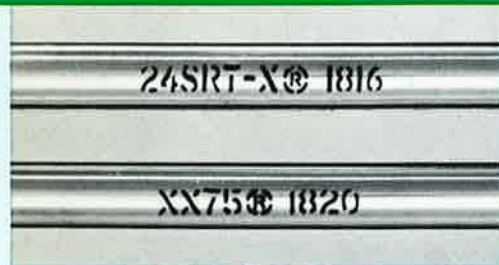

24-SRT-X - Have been the standard of quality since 1946 - All National Championships, recorded perfect ends, five consecutive six-golds at 40 yards are some of the accomplishments of archers shooting 24-SRT-X.

XX-75 - The extremely high strength of 7075 alloy is further increased by many Easton operations to an ultimate strength of 101,000 psi, as much as 20,000 psi over the listed ultimate strength. This increase in strength gives XX-75 its amazing bend resistance and spring qualities.

X-7 - The ultimate in an arrow shaft, strongest, most bend resistant Aluminum alloy ever produced.

SPECIAL FLETCHINGS - Above prices include either regular or helical three fletch. For four fletch add .50 per dozen on PMA-T model. On PMA-F and PMA-H where long feathers are needed Hel 3 Grey or Dyed Barr, .90 doz.; Hel 3 White or Dyed White, 1.25 doz.; Hel 4 Grey or Dyed Barr, 1.25 doz., and Hel 4 White or Dyed White, 2.25 doz.

ORDERING INSTRUCTIONS - Write for special charts giving all the sizes of Easton Tubing. Or specify the exact arrow length and bow weight and we'll give you a perfect match. Be sure to tell us any special fletching or cresting that you desire.

POSITIVE IDENTIFICATION

You can be sure that you are using genuine Easton shafts when you see the trade-mark and shaft number that is etched on every tube - look for this marking when you buy.

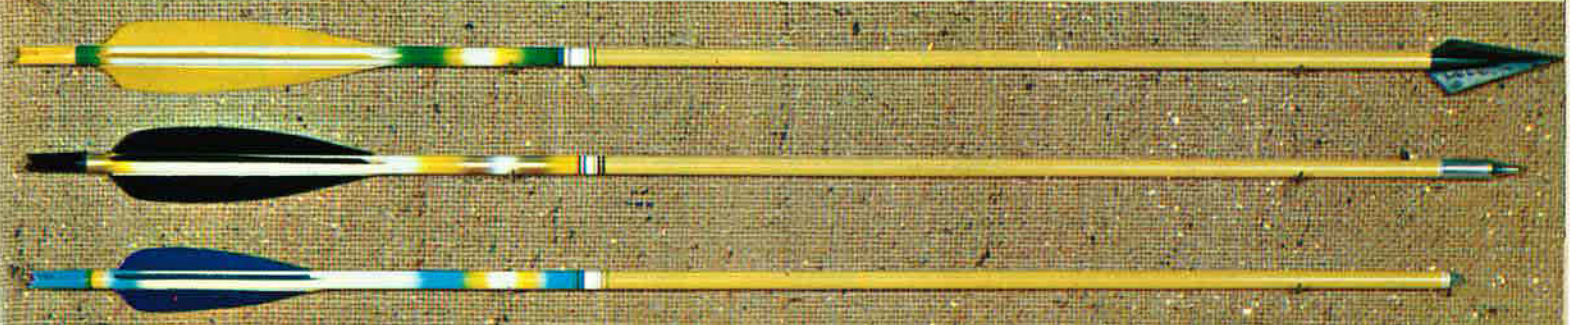

USE THIS CHART TO HELP SELECT THE RIGHT ARROW SHAFT FOR YOU

DRAW LENGTH SHOWN - is for actual draw length from the inside of nock to the shoulder of point.

FIELD AND HUNTING ARROWS - using heavy weight tips, should use the equivalent draw length for 2" longer draw.

Electronics and fabulous fiber glass have combined to make the ultimate arrow! They are permanently straight and never take a warp or set even though they encounter head-on impacts which would shatter or bend ordinary arrows. Tiny filaments of glass are woven into glass cloth - impregnated with plastic resins and wound around a cylindrical shape to form a tube. Diameters and straightness are checked electronically - thus producing the famous "Micro-Flite" shafts.

SPECIAL FLETCHINGS - Above prices include either regular or helical three fletch. For four fletch add .50 per dozen on GA-I model. On GA-H and GA-F where long feathers are needed - Helical 3 Grey or Dyed Barr, .90 doz.; Helical 3 White or Dyed White, 1.25 doz.; Helical 4 Grey or Dyed Barr, 1.25 doz.; and Helical 4 White or Dyed White, 2.25 doz.

ORDERING INSTRUCTIONS - Your choice of above arrows, sets, or shafts will be custom made to fit your requirements. Select the shaft number you wish from the chart below - or give us the draw weight and arrow length and we'll select exactly the right shaft for your needs.

10 DIFFERENT SIZES

There is a "Micro-Flite" shaft that will exactly fit your needs. Each of the ten sizes is made to minute tolerances in weight and spine.

USE THIS CHART TO HELP SELECT THE RIGHT ARROW SHAFT FOR YOU

IMPORTANT INFORMATION

The proper selection of arrows is more important than any other part of your archery equipment. For consistently good shooting, be sure that your arrows are matched exactly to you and your bow.

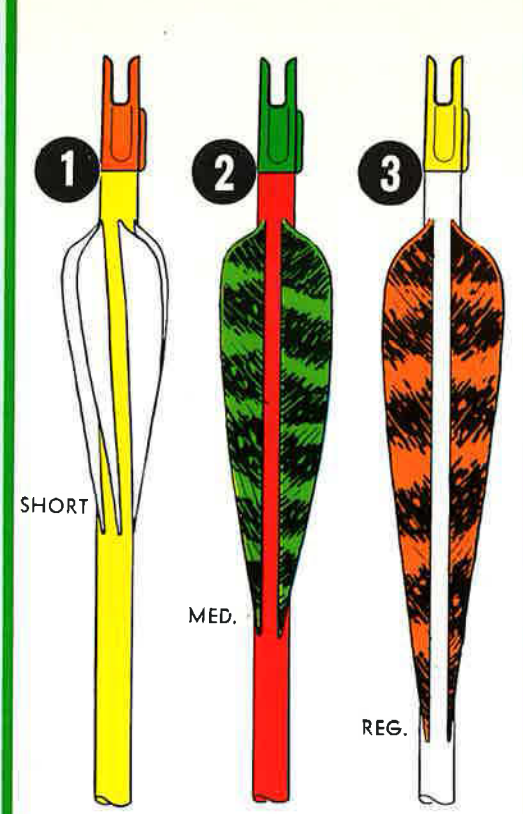

At American Archery we have spent a lifetime studying the dynamics of how an arrow works to peak perfection. We have tens of thousands of Port Orford Cedar shafts that we carefully grade and inspect, before allowing any shaft to become an American arrow.

To get the fullest advantage of value in your arrows make sure that they fit you and your bow.

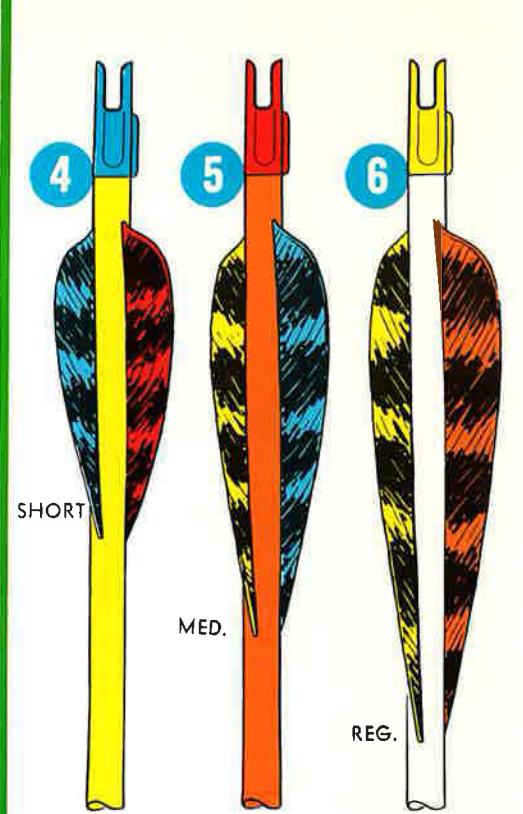

Note: Arrow length is measured from bottom of nock slot to this point.

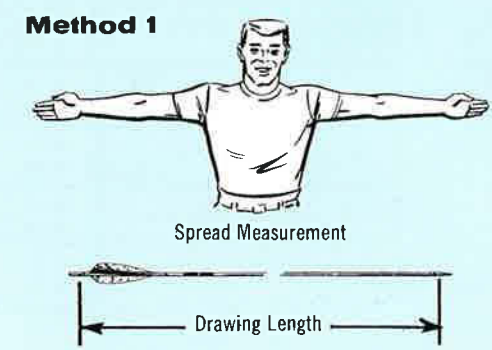

SELECTING CORRECT ARROWS FOR YOU AND YOUR BOW

PLASTIC 6 FLETCH
 1. For advanced archers - available in 3 and 4 vane fletch in short and target lengths.
90° FOUR FEATHER
 2. 90° four feather fletching is the same as the regular Helical fletch except that the vanes are not spiraled around the shaft.
105° 75° 4 FEATHER
 3. 105°/75° four feather fletching is spaced so that the feathers closest to the bow handle are farther apart thus creating less feather drag at this point.

3 FEATHER HELICAL FLETCH
 Available for any type of arrow - wood, metal or glass - many like this type of fletching because they feel that it gives the benefits of 4 feather helical fletching plus a little extra distance. Vanes are usually cut a little higher on three feather helical fletching to give better vision and stability in flight.
WOOD ARROWS
 Helical 3 fletch with Grey or Dyed Barr\$.75 doz.
 Helical 3 fletch with White or Dyed White\$1.25 doz.
METAL AND GLASS ARROWS
 Dyed or barred 3 feather Helical fletchingNo extra charge

Spread Measurement	Arrow Length

72-74"	27-28"
75-77"	28-29"
Over 77"	30"

AMERICAN AIR-FLO FLETCHING

Costs no more than ordinary fletching yet it gives you many added advantages.

1. SMOOTHER FLIGHT
 On all types of fletching from American the vanes are scientifically shaped to allow the passage of air on the vanes without curling them. The vanes are rounded off on the ends to enable the feather to maintain proper shape in flight.
2. BETTER SCORES
 By using only the very best grades of barred and white turkey feathers for the fletching and attaching them with the finest fletching cement and drying the bond with "infra-red" heat - American gives you arrows that will "group" better and result in higher scores in field and target and better success in hunting.
3. WIDER CHOICE
 There is a fletching style to suit every archer and bowhunter. With six basic types of fletching and feather lengths to suit various bow weights - you have a wider choice of fletching on American arrows. The following recommendations for feather lengths and styles are based on years of experience and testing.
 You select the style of fletching you want on your arrows and tell us the length of the arrow and bow weight. We will then fletch your arrows according to the following chart of spines and feather lengths.

WOOD ARROWS

Bow Weights	Feather	Length
Up to 35#	Short	3"
36 to 45#	Medium	4"
46# and over	Regular	5"

ALUMINUM ARROWS

Shaft No.	Feather	Length
1416, 1516, 1518	Extra Short	3"
1716, 1718	Short	3 1/2"
1816, 1818	Med. Short	3 3/4"
1916, 1918, 1920	Med. Regular	4 1/2"
2020	Regular	5"

GLASS ARROWS

Shaft No.	Feather	Length
1	Short	3"
2, 3	Short	3"
4, 5	Med. Short	3 1/2"
6	Med. Regular	4 1/2"
7 to 10	Regular	5"

4 FEATHER

4 feather Helical fletched arrows are the favorites of thousands of experienced field-target and bowhunters. They fly straight and silently - allowing the archer to easily follow them in flight - thus they give higher scores in field and target shooting and increase the chances of the bowhunter's success.

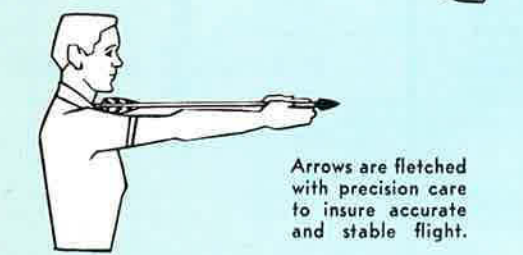

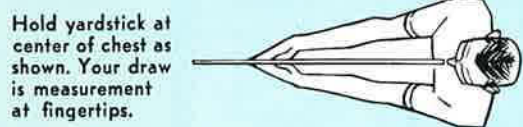

WOOD ARROWS
 Dyed barred - 4 feather Helical fletching\$1.25 doz. extra
 Helical fletching 2.25 doz. extra
METAL AND GLASS ARROWS
 Dyed or barred 4 feather Helical fletching\$.50 doz. extra
 *For additional prices on longer feathers, *see Page 6 under Special Fletchings

3 FEATHER REGULAR FLETCH

Regarded by many as the best fletching of all! We fletch these arrows with a vane that is parallel to the shaft and the natural camber of the feather does the rest. Unless your order states that you want some other type of fletching, we will use a regular three feather fletch based on the spine of the arrow.

WOOD ARROWS
 Barred Regular fletching No extra charge
METAL AND GLASS ARROWS
 Barred Regular fletching No extra charge

Method 2

Arrows are fletched with precision care to insure accurate and stable flight.

Selecting correct arrows for you and your bow

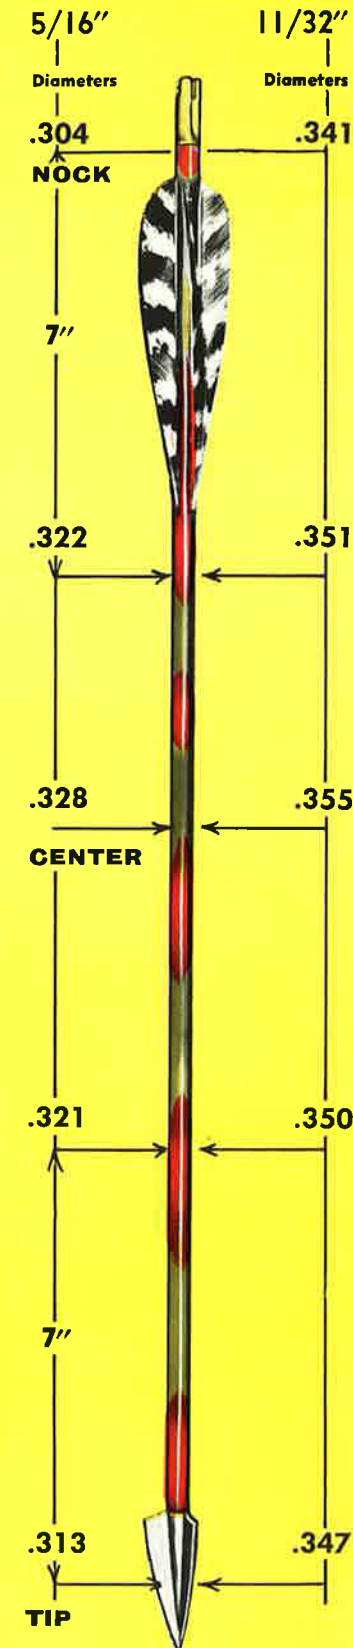

There are two accepted methods used in finding your right arrow length. Method 1 is illustrated on page 7. Simply spread your arms as shown, measure the spread and determine your arrow length according to the chart. The second method is shown at left. Place the nock end of an arrow against the center of your chest and reach out on it with your arms extended straight in front of you. If the arrow is the correct length for you, it will extend to the end of the fingertips. Lacking an arrow, use a yardstick for this measurement. When ordering arrows, specify the bow weight: 40 to 45 lbs., 45 to 50 lbs., etc., and the arrow or draw length.

AMERICAN

"MICROMETER-BARRELED" ARROWS

SHAFT SIZES

IMPROVE YOUR SHOOTING WITH HELICAL FLETCHING

FOUR FEATHER HELICAL FLETCH
Dyed or plain barred.....\$1.25 extra
All white or dyed white..... 2.25 extra

THREE FEATHER HELICAL FLETCH
Dyed or plain barred.....\$.75 extra
All white or dyed white..... 1.50 extra

EASY TO SEE - Helical fletched arrows are much easier to "follow-in-flight" -- you don't have to guess where you hit, whether you are shooting field, target or hunting.

STRAIGHTER FLIGHT - Added air pressure against the Helical vanes causes a faster rotation and makes your arrow fly much straighter. Helical fletched hunting or field arrows will not "plane" or wobble in flight.

INCREASES ENERGY - Ordinary arrows take longer to straighten out in flight, and thus lose energy. Helical fletched arrows straighten out in flight immediately after leaving the bow, thus increasing energy.

IMPROVES ACCURACY - Even the effects of a faulty release are largely overcome with Helical fletching. The faster turning shaft creates a dynamic balance. This is why 75% of the top archers are using Helical fletched arrows.

EXCLUSIVE - Beware of imitations! American Archery is the originator of Helical fletching. We have our own patented fletching jigs. There are many imitations but only one **GENUINE HELICAL FLETCHING**. Be sure that your arrows are made by American and have Helical fletching and you'll see a big improvement in your shooting.

What does "Micrometer-barreled" mean?

"Micrometer-barreled" is a patented American Archery feature wherein the ends of the shaft are tapered a few thousandths of an inch, leaving the center portion slightly stiffer. The back has a few thousandths more taper than the front.

What does this do for arrow flight?

"Micrometer-barreled" puts far better balance into the shaft, enabling it to react properly to the impact of today's high speed composite bows. It enables the shaft to bend just slightly more at the rear end, thus clearing the bow handle better - increasing accuracy and speed.

Are other arrows "Micrometer-barreled"?

No! Others have either extremely tapered shafts or parallel shafts. The ordinary tapered shaft bends too much and whips against the side of the bow. The parallel shaft does not bend enough and scraps against the bow. In both cases - accuracy and speed are lost.

Do "Micrometer-barreled" arrows stay straight longer?

You bet they do! That is just another reason why archers who use them find their scores going up and staying up! Ordinary cheap tapered arrows may work fine for a while - but after a few months use they will be crooked while the "Micrometer-barreled" arrows will still be straight. What's more they will stay that way for years.

Are "Micrometer-barreled" arrows balanced in weight and spine?

Yes, sir! No other manufacturer has such high standards as the American Archery Company. Although our tolerances are 10 grains in weight and 5 pounds in spine, we consistently match much closer than this because of our large scale production.

Can I check "Micrometer-barreled" shafts with a micrometer?

We hope you do! You will find that each dozen is perfectly round and has exactly the same controlled barreling as its mates. Now, check the shafts of any other manufacturer and you'll find that they vary up to ten thousandths of an inch in roundness and tapering!

Do "Micrometer-barreled" arrows cost more?

No! Even though they are the best arrows in the country, they actually cost less than many other top grades of other manufacturers. All grades of American arrows are "Micrometer-barreled" except the very cheapest beginner's practice arrows.

Which American Arrows are "Micrometer-barreled"?

All American arrows are "Micrometer-barreled" except the very lowest priced beginner's arrows.

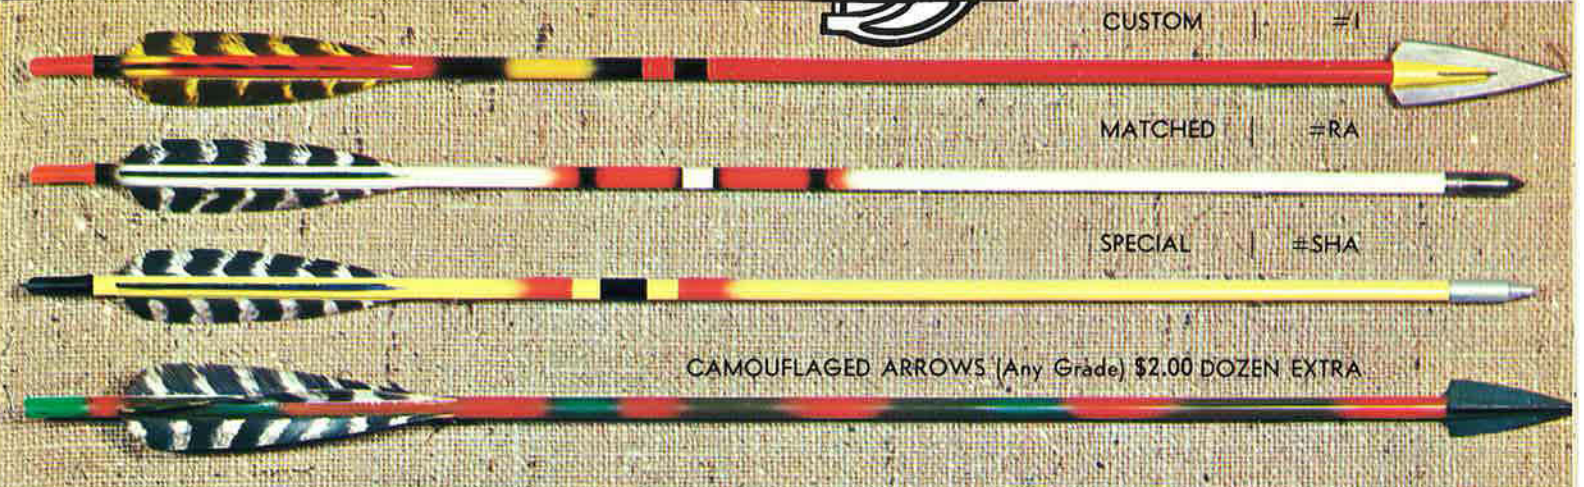

AMERICAN

"MICROMETER-BARRELED" ARROWS

FAMOUS FOR HIGHEST QUALITY - AND LOWEST RETAIL PRICES!

All grades are matched in weight and spine to the highest standards in the industry! Every shaft is genuine Port Orford Cedar - laquer sealed to prevent warping. No matter which grade you buy you'll find them straight and true. You get far more quality for every penny when you buy American Arrows.

SET UP YOUR OWN BACK YARD ARCHERY RANGE!

Saunders Matt Easel on Rubber-tired Wheels

"SHORTY STAND"

Outselling other stands 3 to 1. For 24" and 36" matts. Patented construction - cannot damage arrows - keeps target low - minimizes over-shooting - Easy to set up - lasts indefinitely - ideal for home or club use.

SSS For 24, 30, 36 inch matts...\$ 4.95 ea.

17.95

SCHRAM STANDARD SIGHT

The standard model consists of a much smaller block (less than 5/8" of an inch.) This block can be used on either the Deluxe or Supreme models. Ideal for target shooters, indoor shooters and also hunting. A prism can also be used with in it. Using a prism in the top block and a pin in the bottom block you have a very efficient range finder.

S-3 Complete (less prism)\$5.50

SCHRAM CUSTOM STANDARD SIGHT

The custom standard has the same block size as the standard except that it has a movable indicator pin. The movable indicator is used for immediate yardage correction for new string bow let down, etc.

S-4\$7.50

SIMPLEX BOW SIGHT

A very ruggedly built sight - made of chrome plated steel with an adjustable cross bar sighting plate. Has two sizes of peep holes for fine aiming. Thumb screw locks sighting plate for windage and yardage. A good sight for beginners to use.

SBS Complete..... 1.25

MULLER FIELD-SITE

Same overall design as above sight except it has a hooded ball sight mounted on a post. With this sight there is never any glare from the sun regardless of the angle of shooting. Removable paper allows yardages to be conveniently marked - smooth sliding block allows fast settings.

HB - Complete.....\$3.75

MULLER HUNTER'S-SITE

Has a red bead, a white bead and a yellow bead mounted on an adjustable anodized frame. With this sight a bowhunter can make a pre-setting with the yellow bead for about 15 yards. The slide should then be locked in place and the middle bead set for about 30 yards and the bottom bead for 50 yards.

H - Complete.....\$3.50

MULLER BALL TARGET-SITE

Has all the same features of colors, anodized metal parts, etc., of the other Muller Sites - except it has a post type sighting bar with a metal ball on the tip. This is adjustable for windage and is the smoothest adjusting sight made. It comes in a cellophane package with complete instructions for installing and using. This is ideal for the beginner as well as the expert.

SB - Complete.....\$2.50

ART LA HA IN NO LAND FOR THE TIMID

A request from the Bureau of Indian Affairs started Art La Ha on a journey to the far North that proved to be a test of man, his equipment, and his ingenuity.

On distant St. Lawrence Island, located in the windswept Bering Sea, midway between Russia and Nome, Alaska, Art La Ha made his home with the Eskimos for over a month.

The recovery of walrus was the problem at hand and the Cheetah Hunters Special was put to a most rugged test. Many hundred walrus are killed each year by the Eskimos, but their recovery and salvage is alarmingly small.

Special harpoon arrows were designed and made by the engineering department of American Archery Company to not only provide deep penetration, but to also carry a line to which the poke or buoy was secured. As many of these mammals weigh over 3,000 pounds, it was most important to secure a line strong enough to provide recovery, yet light enough to fly from the Cheetah Special with deadly accuracy.

The results of this experiment proved most rewarding. Not only did Art La Ha show the Eskimos how to recover walrus safely, but also showed them the Cheetah Special had more than ample killing power for a creature of this size.
