# About The Walking School

The clinic will introduce treatment approaches for improved function and return to a more active lifestyle with increased independence. Understanding the dynamics of prosthetic devices and how to properly control them will enable individuals to walk/run, move side to side, bend down, jump, and climb stairs with more confidence. Techniques introduced will increase strength and flexibility helping participants to operate more efficiently and safely. One-on-one opportunities and "hands-on" participation techniques will apply. Professionals in the field of rehabilitative therapy and sport will receive high level training in advanced exercises appropriate for use with participants of all ages to improve ambulating. Amputees of all ages are encouraged to attend every clinic date.
