

Environmental Canine Services LLC

Ship and Sniff Service

A Unique Water Sample Screening Method

Advantages of *Ship and Sniff*:

- Fast identification of “hotspots” of sewage contamination in watersheds
- Cost savings over lab testing for human vs. animal DNA sources
- Quick turnaround time
- Flexible scheduling

How it Works:

- You collect water samples and prepare them for shipping according to our quality control protocol.
- You ship them to us for canine scent testing.
- For quality control, we conduct scent testing with 2 canine/handler teams plus inclusion of field blanks (negative control) and sewage samples (positive control).
- You receive a report of the results quickly.

Canine scent testing of storm water and surface water samples is a method developed by our company, used nationwide for the past 8 years, and backed by research to identify the presence of sewage and its harmful bacterial contamination. The canines only alert to the presence of human source, not animal source contamination.

Pricing:

\$35 per sample plus you provide sample bottles and pay all shipping costs. No refrigeration needed. Samples may be received by ECS up to 7 days after collection.
