

Broad Band Light™ Treatment (BBL)

*Look and feel years younger with
quick, non-surgical treatments with NO DOWN TIME!!*

Using Sciton's™ leading-edge Broad Band Light™ technology, we can offer a wide variety of skin treatments to help you look and feel younger.

BBL™ is similar to IPL (Intense Pulsed Light). The advantage of BBL™ comes with using different wavelength filters to fine tune treatment based on desired results. Conditions such as sun damage, aging skin, rosacea, acne, and even unwanted hair can benefit from BBL™. Most people start with treatments on the face but any part of the body can be treated. Other popular areas are the neck, décolleté, and hands. BBL will not improve deep wrinkles.

After corrective treatments are completed, the maintenance phase begins. By using the FDA-approved Forever Young BBL™ treatment, we can continue to rejuvenate aging skin for a smoother, more youthful appearance. We recommend 2-4 treatments per year for maintenance.

Treatments offered:

- Significantly diminishing solar damage /sun/age spots
BBL works well for sun damage and dark skin discolorations (age spots). Some patients see results after just one treatment, but stubborn spots may take several visits to resolve. Once the desired results are achieved, maintenance treatments are recommended two to four times per year with Forever Young BBL™ as well as daily sunscreen.
- Skintyte II helps to firm skin on the face, neck and body by using gentle heating of the deep skin layers. A series of 5 treatments at 2 week intervals recommended. Peak results at 3-6 months.
- Treating acne with proven results. BBL is an FDA-approved treatment that has been proven to be effective in the treatment of acne. A series of treatments 2 to 4 weeks apart may be necessary for optimal results. Adding SkinTyte II to the acne treatments can help diminish the scarring which can occur with moderate to severe acne.
- Relieving rosacea by treating the underlying skin damage. The redness, flushing and breakouts associated with rosacea respond well to BBL treatment. Three to five initial treatments are recommended at 3 to 4 week intervals, as well as maintenance treatments two to four times per year.
- Making vascular lesions disappear
BBL can be used to treat tiny blood vessels on the body and face that cause the appearance of blushing and general redness. If vessels are larger or easy to define, the ClearScan Laser (NdYag 1064nm) may be a better choice. (ask Rosanne for details)
- Forever Young BBL™ rejuvenates skin
The Forever Young BBL treatment is used to maintain the desired results of the BBL Corrective Treatments. Scientific evidence demonstrates that regular maintenance treatments using Forever Young BBL rejuvenates skin and delays skin aging on a cellular level.
- Forever Bare BBL™ safely removes hair (6 treatments recommended)
BBL is a safe, gentle yet effective way to achieve permanent hair reduction. BBL energy heats hair follicles causing it to stop producing hair without harming any surrounding tissue. After a series of treatments, most hair is permanently and significantly reduced.
