

FERTILIZERS

DADDY PETE'S COMPOSTED COW MANURE

Since 1988, Daddy Pete's has developed a quality method for composting cow manure. The result: a completely organic cow manure that is odor-free and will not burn.

The manure goes through several stages of decomposition. Over a period of 40-60 days, microorganisms convert biodegradable organic matter in the manure to oxidized products. The interior temperature of the cow manure while composting reaches approximately 160°F which is beneficial in eliminating weeds, seeds, and pathogens.

This 100% natural fertilizer can be applied generously anytime during the year to build a rich, humus soil. It is also a natural moisture control product.

INGREDIENTS

- ORGANIC COMPOSTED COW MANURE

AVAILABLE BAG SIZES

*Also available in bulk.

PRODUCT USES

Amending Soil, Lawns
