

C20™ Treats Chlorosis In Pin Oak

Case Study #6:

“Feed the soil microbes that feed your plants”

After several unsuccessful attempts at addressing foliar chlorosis using standard treatments, this 10 inch DBH northern pin oak was treated with C20™ in June of 2015.

The turf was removed in a 3 foot radius ring around the base of the tree. C20™ was applied directly to the soil and then covered with wood mulch.

Photos courtesy, Green Life Supply, Minneapolis, Minnesota

The photo on the left taken in June 2015, at the time of application, shows the yellow color of the chlorotic pin oak. Only 54 days later the pin oak improved to have dark green foliage as seen in the photo on the right.

C20™ is ideal for treating trees, shrubs, and flowering plants in yards, gardens and landscapes.
