Test Comments: *Ideal conditions gave this crop good uniform emergence. Field work soon stopped as persistent wet conditions moved in. The crop was only V10 growth stage on June 27. Several leaf blights and anthracnose were prevalent however, cool conditions prevented escalation. Persistent wet soils all season hurt yield potential of area fields. Ear diseases such as Cladosporium ear rot were noted at harvest.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
