

Quadrant Takes the Stress Out of Machining Plastics

This simple test of splitting a rod or plate shows how internal stresses differ among different supplier's acetal shapes.

With Acetron® GP, we've taken the stress out of machining plastics—*literally!*

High internal stresses in plastics can cause surprising changes in finished part dimensions. Quadrant's advanced production technology consistently delivers the lowest internal stress levels available, for consistent machining and finished parts that hold precise tolerances.

- Better yields and improved productivity, particularly on non-symmetrical and complex part designs.
- Closer tolerances and maximum flatness and straightness dimensions.
- More consistent machinability with less tweaking of set-ups.

With over \$1 million worth of Acetron® GP in stock, AIN Plastics can provide you with fast and reliable delivery at competitive prices. We carry a complete range of sizes and shapes including oversize plate, thick gauge plate, and large diameter rod in both natural and black colors. So the next time you're looking for a premium quality acetal shape from stock at a competitive price, remember — Quadrant takes the stress out of machining plastics, and...

AIN Plastics Takes the Stress Out of Buying Plastics.
