

# TRU SS34

## GENERAL PURPOSE CORROSION AND ABRASION RESISTANT STAINLESS STEEL

**TRU SS34** is a general-purpose, non-magnetic stainless steel with corrosion and abrasion resistance and physical properties equal to or superior to those of typical 304, 18-8 stainless steel.

- **CORROSION RESISTANT:** Best among standard grades, resists pitting and oxidation at elevated temperatures. Corrosion resistance not affected by normal brazing, welding or stress relieving. Uses where severe corrosion exists, or when EPA regulations require stainless steels.
- **ABRASION RESISTANT:** Increased Nickel and Chromium aids in wearability superior to that of standard grades of stainless steel. Resists warping due to temperature changes.
- **WELDABLE:** Exhibits minimal carbide precipitation during welding.

## APPLICATIONS

Arbors  
Hoppers Spindles  
Shafts

Chutes  
Pins  
Troughs

Chute Liners  
Scraper Blades
