

Endodontics

Tran Dental specializes in endodontic (root canal) care. We use the latest in technology and techniques to bring our patients the highest degree of personalized care they deserve. From root canal surgeries to fixing cracked teeth, we are committed to restoring health and function to your smile!

Root Canal

A root canal is one of the most common dental procedures in the U.S. Performed to remove any infections within the tiny canals of a tooth, this procedure typically takes 1 or 2 appointments.

During the first appointment, the patient will be given local anesthesia to numb the affected area. The doctor then creates an opening at the crown of the tooth, making sure to remove or clean the pulp, nerve tissue and bacteria if necessary. After the tooth is cleaned, the tooth will be sealed with a dental filling. The final visit will entail placement of crown on tooth to add strength and restore functionality.

Call Tran Dental to schedule a San Antonio endodontics and root canal consultation with one of our dentists today!
