

3/23/15

40 Car

40 car team is almost completely done with their car. All painting and wiring is completed. All they have to finish is small details, such as graphics and a little bit of canopy work. A minor difficulty with the car was that the back tire kept going flat so the team had to continually switch rear tire tubes.

30 Car

This month the 30 car team has started and almost completely finished the tail. Also they have finished the brakes and steering. They are currently working on attaching the body to the chassis as well as putting graphics on the car. Some difficulties this month have been getting the body and tail to fit perfectly with the chassis. The team will be working on tail lights and filling gaps in the body to make it smoother.

50 Car

The 50 Car team has painted the body this month and are currently working on brake lights and wheel covers to help with aerodynamics. One problem with the car is the tail because it is not fitting correctly. The plan is to make it fit by adding supports to the chassis.
