Add and subtract within 20

Fluently add and subtract within 100

Fluently multiply and divide within 100

Fluently add and subtract multi-digit whole numbers

Fluently multiply multi-digit whole numbers

Fluently add, subtract, multiply, and divide multi-digit decimals

Recognize that in a multi-digit number, a digit in one place represents 10 times as much as it represents in the place to its right and $\frac{1}{10}$ of what it represents in the place to its left.

Understand that the three digits of a three-digit number represent amounts of hundreds, tens, and ones

Compose and decompose numbers from 11 to 19 into ten ones and some further ones

Understand that the two digits of a two-digit number represent amounts of tens and ones

Recognize that in a multi-digit number, a digit in one place represents ten times what it represents in the place to its right

Use place value understanding to round whole numbers to the nearest 10 or 100

Where student IS

Where student NEEDS TO BE

Compose and decompose numbers from 11 to 19 into ten ones and some further ones...

Understand that the two digits of a two-digit number represent amounts of tens and ones.

Understand that the three digits of a three-digit number represent amounts of hundreds, tens, and ones.

Use place value understanding to round whole numbers to the nearest 10 or 100.

Recognize that in a multi-digit number, a digit in one place represents ten times what it represents in the place to its right...

Recognize that in a multi-digit number, a digit in one place represents 10 times as much as it represents in the place to its right and $\frac{1}{10}$ of what it represents in the place to its left.

Interpret and compute quotients of fractions, and solve word problems involving division of fractions by fractions...

Solve multi-step word problems posed with whole numbers and having whole-number answers using the four operations

Solve word problems that call for addition of three whole numbers whose sum is less than or equal to 20

Solve real-world and math problems involving the four operations with rational numbers.

Use addition and subtraction within 100 to solve one- and two-step word problems

Solve real-world and math problems leading to two linear equations in two variables

Use multiplication and division within 100 to solve word problems

Solve addition and subtraction word problems, and add and subtract within 10

Solve word problems involving addition and subtraction of fractions referring to the same whole, including cases of unlike denominators

Solve addition and subtraction word problems, and add and subtract within 10

Solve word problems that call for addition of three whole numbers whose sum is less than or equal to 20

Use addition and subtraction within 100 to solve one- and two-step word problems

Use multiplication and division within 100 to solve word problems

Solve multi-step word problems posed with whole numbers and having whole-number answers using the four operations

Solve word problems involving addition and subtraction of fractions referring to the same whole, including cases of unlike denominators

Interpret and compute quotients of fractions, and solve word problems involving division of fractions by fractions

Solve real-world and math problems involving the four operations with rational numbers

Solve real-world and math problems leading to two linear equations in two variables

Where student IS

Where student NEEDS TO BE

Use addition and subtraction within 100 to solve one- and two-step word problems

Use multiplication and division within 100 to solve word problems

Solve multi-step word problems posed with whole numbers and having whole-number answers using the four operations

Where student IS

Where student NEEDS TO BE

Explain addition and subtraction strategies using place value and properties of operations...

Understand that the two digits of a two-digit number represent amounts of tens and ones.

Add and subtract within 100 to solve real-world problems...

Fluently add and subtract within 100 using strategies based on place value, properties of operations, and/or relationships.

Apply properties of operations as strategies to multiply and divide....

Fluently multiply and divide within 100, using strategies such as the relationship between multiplication and division...

Use multiplication and division within 100 to solve word problems...

Fluently add and subtract multi-digit whole numbers using the standard algorithm.

Understand that multiplying three one-digit numbers is the same as multiplying two one-digit numbers by the product of the other two one-digit numbers.

Find unknowns in multiplication and division equations involving whole numbers. For example, solve $8 \times ? = 48$, $5 \times 9 = 45$, $42 \div 6 = ?$.

Fluently multiply multi-digit whole numbers using the standard algorithm.

Solve multi-step word problems involving multiplication and division of whole numbers using the standard algorithm.

An important subset of the major work in grades K–8 is the progression that leads toward middle school algebra.

K	1	2	3	4	5	6	7	8
Know number names and the count sequence	Represent and solve problems involving addition and subtraction	Represent and solve problems involving addition and subtraction	Represent & solve problems involving multiplication and division	Use the four operations with whole numbers to solve problems	Understand the place value system	Apply and extend previous understandings of multiplication and division to divide fractions by fractions	Apply and extend previous understanding of operations with fractions to add, subtract, multiply, and divide rational numbers	Work with radical and integer exponents
Count to tell the number of objects	Understand and apply properties of operations and the relationship between addition and subtraction	Add and subtract within 20	Understand properties of multiplication and the relationship between multiplication and division	Generalize place value understanding for multi-digit whole numbers	Perform operations with multi-digit whole numbers and decimals to hundredths	Apply and extend previous understandings of numbers to the system of rational numbers	Analyze proportional relationships and use them to solve real-world and mathematical problems	Understand the connections between proportional relationships, lines, and linear equations**
Compare numbers	Add and subtract within 20	Use place value understanding and properties of operations to add and subtract	Multiply & divide within 100	Use place value understanding and properties of operations to perform multidigit arithmetic	Apply and extend previous understandings of multiplication and division to multiply and divide fractions	Understand ratio concepts and use ratio reasoning to solve problems	Use properties of operations to generate equivalent expressions	Analyze and solve linear equations and pairs of simultaneous linear equations
Understand addition as putting together and adding to, and understand subtraction as taking apart and taking from	Work with addition and subtraction equations	Measure and estimate lengths in standard units	Solve problems involving the four operations, and identify & explain patterns in arithmetic	Extend understanding of fraction equivalence and ordering	Geometric measurement: understand concepts of volume and relate volume to multiplication and to addition	Apply and extend previous understandings of arithmetic to algebraic expressions	Solve real-life and mathematical problems using numerical and algebraic expressions and equations	Define, evaluate, and compare functions
Work with numbers 11-19 to gain foundations for place value	Extend the counting sequence	Relate addition and subtraction to length	Develop understanding of fractions as numbers	Build fractions from unit fractions by applying and extending previous understandings of operations	Graph points in the coordinate plane to solve real-world and mathematical problems*	Reason about and solve one-variable equations and inequalities		Use functions to model relationships between quantities
	Understand place value		Solve problems involving measurement and estimation of intervals of time, liquid volumes, & masses of objects	Understand decimal notation for fractions, and compare decimal fractions		Represent and analyze quantitative relationships between dependent and independent variables		
	Use place value understanding and properties of operations to add and subtract		Geometric measurement: understand concepts of area and relate area to multiplication and to addition					
	Measure lengths indirectly and by iterating length units							

* Indicates a cluster that is well thought of as a part of a student's progress to algebra, but that is currently not designated as major by the assessment consortia in their draft materials. Apart from the one asterisked exception, the clusters listed here are a subset of those designated as major in the assessment consortia's draft documents.

** Depends on similarity ideas from geometry to show that slope can be defined and then used to show that a linear equation has a graph which is a straight line and conversely.

<https://achievethecore.org/category/774/mathematics-focus-by-grade-level>

Table A.3. Grades 6–8 Curriculum Focal Points and Connections Compared with the Expectations of the Content Standards in *Principles and Standards for School Mathematics*

Curriculum Focal Points and Connections	Expectations of the Content Standards
<p>Grade 6 Curriculum Focal Points</p> <p>Number and Operations: Developing an understanding of and fluency with multiplication and division of fractions and decimals</p> <p>Students use the meanings of fractions, multiplication and division, and the inverse relationship between multiplication and division to make sense of procedures for multiplying and dividing fractions and explain why they work. They use the relationship between decimals and fractions, as well as the relationship between finite decimals and whole numbers (i.e., a finite decimal multiplied by an appropriate power of 10 is a whole number), to understand and explain the procedures for multiplying and dividing decimals. Students use common procedures to multiply and divide fractions and decimals efficiently and accurately. They multiply and divide fractions and decimals to solve problems, including multistep problems and problems involving measurement.</p> <p>Number and Operations: Connecting ratio and rate to multiplication and division</p> <p>Students use simple reasoning about multiplication and division to solve ratio and rate problems (e.g., “If 5 items cost \$3.75 and all items are the same price, then I can find the cost of 12 items by first dividing \$3.75 by 5 to find out how much one item costs and then multiplying the cost of a single item by 12”). By viewing equivalent ratios and rates as deriving from, and extending, pairs of rows (or columns) in the multiplication table, and by analyzing simple drawings that indicate the relative sizes of quantities, students extend whole number multiplication and division to ratios and rates. Thus, they expand the repertoire of problems that they can solve by using multiplication and division, and they build on their understanding of fractions to understand ratios. Students solve a wide variety of problems involving ratios and rates.</p> <p>Algebra: Writing, interpreting, and using mathematical expressions and equations</p> <p>Students write mathematical expressions and equations that correspond to given situations, they evaluate expressions, and they use expressions and formulas to solve problems. They understand that variables represent numbers whose exact values are not yet specified, and they use variables appropriately. Students understand that expressions in different forms can be equivalent, and they can rewrite an expression to represent a quantity in a different way (e.g., to make it more compact or to feature different information). Students know that the solutions of an equation are the values of the variables that</p>	<p>Number and Operations, Grades 6–8</p> <ul style="list-style-type: none"> ●●● Work flexibly with fractions, decimals, and percents to solve problems ●●● Compare and order fractions, decimals, and percents efficiently and find their approximate locations on a number line ●● Develop meaning for percents greater than 100 and less than 1 ●● Understand and use ratios and proportions to represent quantitative relationships ●● Develop an understanding of large numbers [identified in Grades 4 and 5 Curriculum Focal Points] and recognize and appropriately use exponential, scientific, and calculator notation ● Use factors, multiples, prime factorization, and relatively prime numbers to solve problems ● Develop meaning for integers and represent and compare quantities with them ●● Understand the meaning and effects of arithmetic operations with fractions, decimals, and integers ●● Use the associative and commutative properties of addition and multiplication and the distributive property of multiplication over addition to simplify computations with integers, fractions, and decimals ●● Understand and use the inverse relationships of addition and subtraction, multiplication and division, and squaring and finding square roots to simplify computations and solve problems ●● Select appropriate methods and tools for computing with fractions and decimals from among mental computation, estimation, calculators or computers, and paper and pencil, depending on the situation, and apply the selected methods

evidence-based practice

evidence-based intervention

evidence-based strategy

A method or strategy that has shown consistent and positive results

Teachers should use systematic and explicit instruction to help students develop a strong foundation for specific mathematics skills.

Students require modeling and practice on how to use the language of mathematics.

Students should use hands-on tools, virtual manipulatives, drawings, and other visuals to understand mathematics concepts and procedures.

Teachers should use fluency building activities to build counting fluency and fluency with the operations.

Students should learn how to set up and solve word problems by combining an attack strategy with a focus on word-problem schemas.

Research and Information

 What are your strengths?

 What are your opportunities for growth?

 What are your immediate next steps?

MATH

MATH

Over a half century of research supports explicit (i.e., direct, systematic) instruction.
(Stockard et al., 2018)

When compared to discovery approaches, explicit instruction demonstrates higher outcomes.
(Alfieri et al., 2011; Kroesbergen et al., 2004; Poncy et al., 2010)

Numerous meta-analyses and large-scale studies have identified explicit instruction as essential for the teaching and learning of mathematics.
(Chodura et al., 2015; Ennis & Losinski, 2019; Jitendra et al., 2018; Kong et al., 2021; Morgan et al., 2015; Nelson & McMaster, 2019; Powell et al., 2021).

"Today, we are learning about addition. This is important because sometimes you have different amounts - like money - and you want to know how much money you have altogether."

"Let's solve this problem. What's the problem?"

"26 plus 79."

"To solve 26 plus 79, first decide about the operation. Should we add, subtract, multiply, or divide?"

"Add."

"How did you know we want to add?"

"There's a plus sign."

"The plus sign tells us we want to add. To add, let's use the partial sums strategy. What strategy?"

"Partial sums."

"What might partial mean?"

"Part of."

"We'll find parts - or partial sums - then add them together. With the partial sums strategy, we start adding in the greatest place value. What's the greatest place value in this problem?"

"The tens."

"So, let's add the tens. What's 20 plus 70? Use your base-10 blocks or other tools."

"20 plus 70 equals 90. Let's write 90 right here below the equal line. What will we write?"

"90 is the partial sum when you add the tens. What does 90 represent?"

"Now, let's add the ones. What should we add?"

"90." 

"90." 

"It's the partial sum of adding 20 plus 70." 

"6 plus 9." 

"6 plus 9 equals what? Use your base-10 blocks or other tools."

"15." 

"How did you get 15?"

"We knew we had 9, then we added on 6." 

"Let's write 15 below the 90. Where do we write the 15?"

"Below the 90." 

"15 is the partial sum when you add the ones. Now, let's add the partial sums together. What will we add?"

"90 plus 15." 

"What's 90 plus 15?
Use your go-to
strategy."

"105." 

"How did you add
those addends?"

"I added 90 plus
10 then added 5
more." 

"So, when you add
26 plus 79, the sum
is 105. Who can
share how we solved
this problem?"

"We used the
partial sums
strategy. We
added the tens
then added the
ones. Then we
added the partial
sums." 

What did you observe?

How would you improve this example?

Modeling
needs to

9. English spelling and usage may have irregularities
10. Some math concepts are verbalized in more than one way
11. Informal terms may be used for formal math terms

rhombus vs.
diamond

vertex vs. corner

Use formal math language

Use terms precisely

What number is in the tens place?

What digit is in the tens place?
What is the value of the digit in the tens place?

135

Why this is important...

- A number refers to the entire amount.
- The 3 in the tens place value is not a number, but rather a digit in the number 135.
- Reinforces conceptual understanding of place value.
- Emphasizes that 3 is part of the number 135 with a value of 30.

The alligator eats the
bigger number

is less than
OR
is greater than

Why this is important...

- Students must learn how to read and write the inequality symbols.
- Students must learn to read equations correctly from left to right because $<$ and $>$ are two distinct symbols.

carry OR borrow

regroup OR
trade OR
exchange

$$\begin{array}{r} 167 \\ + 294 \\ \hline \end{array}$$

Why this is important...

- “Carry” or “borrow” is procedural.
- The other terms reinforce the conceptual understanding or regrouping ones into tens, tens into hundreds, and so on (i.e., the total amount does not change) *or* ungrouping hundreds into tens, tens into ones, and so on.

top number and
bottom number

numerator and
denominator

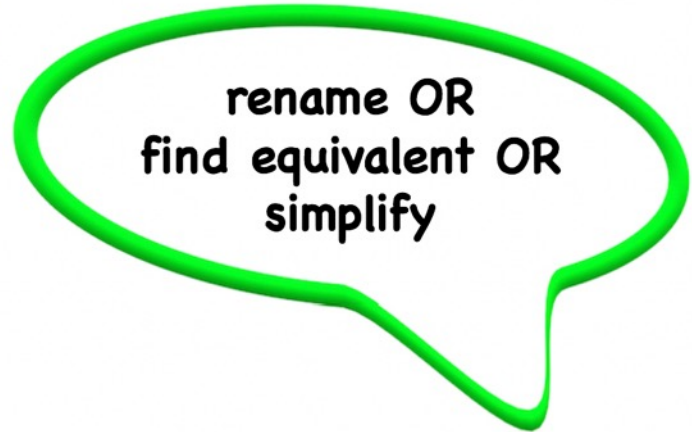

Why this is important...

- Identifying that there are two separate (whole) numbers suggests that whole number properties can be applied to fractions.
- Emphasizing that a fraction is ONE number with ONE magnitude on a number line that is communicated with a numerator and denominator is important.

reduce the fraction

rename OR
find equivalent OR
simplify

Why this is important...

- Reducing suggests that the quantity or magnitude of the new number will be less than the original number.

Four point seven
Four point oh seven

Four and seven tenths
Four and seven hundredths

4.7
4.07

Why this is important...

- Accurately shares the magnitude of the decimal.
- Emphasizes place value.

box OR ball

square OR
circle

Why this is important...

- Use the formal language of shapes to confirm informal language.

point

vertex

Why this is important...

- This is the endpoint where two or more line segments or rays meet.

flips, slides, turns

reflections,
translations,
rotations

Why this is important...

- The informal language helps children remember the actions, but this vocabulary is not used on assessments.
- Use the formal mathematical terms.

long hand and
short hand

minute hand and
hour hand

Why this is important...

- The informal language describes the length of clock hands but not the meaning.
- Help students understand the hours and minutes.

Modeling Fractions with Cuisenaire Rods

A screenshot of a digital interface for modeling fractions with Cuisenaire rods. On the left, a rack contains rods of various colors and lengths: white, red, light green, purple, yellow, dark green, black, brown, blue, and orange. On the right, a grid shows a horizontal rod composed of four red rods. A control panel on the right includes buttons for 'View Hint' (lightbulb icon), 'Clear' (refresh icon), 'View Help' (question mark icon), and 'Trash Can' (trash can icon).

A screenshot of a digital interface for drawing shapes on a dot grid. A triangle is drawn with vertices on grid points. The left vertical side is orange, the bottom horizontal side is red, and the hypotenuse is yellow. A toolbar at the bottom contains various icons for drawing and editing, including a trash can, a grid, a dot grid, a circle, a square, a rectangle, a triangle, a line, a plus sign, a minus sign, a pencil, and an information icon.

INSTRUCTIONAL STRATEGIES

Fluency

Mathematics fluency, particularly fluency with facts and computation, is related to overall mathematics performance.

(Bailey et al., 2012; Cirino et al., 2019; Koponen et al., 2007, 2017; Vukovic et al., 2014)

Fact fluency practice improves mathematics fact performance.

(Burns et al., 2010; Coddington et al., 2011; McCallum et al., 2004; Nelson et al., 2013; Poncy et al., 2010; Schutte et al., 2015; Stocker & Kubina, 2017)

Fluency is
doing
mathematics
easily and
accurately.

Fluency in
mathematics
makes
mathematics
easier.

Fluency
provides less
stress on
working
memory.

Fluency helps
students build
confidence
with
mathematics.

With fluency, it is important to emphasize both
conceptual learning and procedural learning.

Fluency with Facts

Addition

Subtraction

Multiplication

Division

100 addition facts

Single-digit addends sum to a single- or double-digit number

$$\begin{array}{r} 5 \\ + 4 \\ \hline 9 \end{array}$$

(addend)
(addend)
(sum)

Total

Addition

Count one set, count another set, put sets together, count sum

$$2 + 3 = 5$$

Change

Addition

Start with a set, add the other set, count sum

$$2 + 3 = 5$$

Total

Addition

Parts put together into a **total**

Karly saw **4** cardinals and **5** blue jays. How many birds did Karly see?

Change

Addition

An amount that increases or decreases

Premila had \$4. Then they earned \$5 for cleaning their room.
How much money does Premila have now?

$$3 + 9 = \underline{\quad}$$

Addition

If you have brown eyes:

What's a Total story to show addition?

If you don't have brown eyes:

What's a Change/Join story to show addition?

100 subtraction facts

Subtrahend and difference are single-digit numbers and minuend is single- or double-digit number

$$\begin{array}{r} 16 \\ - \quad 8 \\ \hline 8 \end{array}$$

(minuend)
(subtrahend)
(difference)

Change

Subtraction

start with a set, take away from that set, count difference

$$5 - 3 = 2$$

Difference

Subtraction

Compare two sets, count difference

$$5 - 3 = 2$$

Change

Subtraction

An amount that increases or decreases

Bronwyn had 9 cookies. Then they ate 2 of the cookies. How many cookies does Bronwyn have now?

Difference

Subtraction

Greater and lesser amounts compared for a difference

Rachel has 9 apples. Jodie has 2 apples. How many more apples does Rachel have? (How many fewer does Jodie have?)

$$9 - 5 = \underline{\quad}$$

Subtraction

If you would chose beaches:
What's a Change/Separate story
to show subtraction?

If you would chose mountains:
What's a Difference story to
show subtraction?

100 multiplication facts

Multiplication of single-digit factors results in a single- or double-digit product

2	(<u>factor</u>)
<u>× 3</u>	(factor)
6	(<u>product</u>)

Equal Groups

Multiplication

Show the groups, show the amount for each group, count product

$$3 \times 2 = 6$$

Equal Groups

Multiplication

Show the groups, show the amount for each group, count product

$$3 \times 2 = 6$$

Comparison

Multiplication

Show a set, then multiply the set

$$3 \times 2 = 6$$

Equal Groups

Multiplication

Groups multiplied by **number in each group** for a **product**

Rhiannon has **2** boxes of crayons. There are **12** crayons in each box. How many crayons does Rhiannon have altogether?

Comparison

Multiplication

Set multiplied by a number of times for a product

Vivienne had 12 stickers. Jessica had 2 times as many stickers as Vivienne. How many stickers did Jessica have?

$$2 \times 5 = \underline{\quad}$$

Multiplication

If you wear glasses:

What's an Equal Groups story to show multiplication?

If you don't wear glasses:

What's a Comparison story to show multiplication?

90 division facts

Divisor and quotient are single-digit numbers and dividend is single- or double-digit number

$$8 \div 4 = 2$$

(dividend) (divisor) (quotient)

Equal Groups

(Partitive Division)

Division

Show the dividend, divide equally among divisor, count quotient

$$8 \div 2 = 4$$

Equal Groups

(Quotative Division)

Division

Show the dividend, make groups of the divisor, count groups

$$8 \div 2 = 4$$

Equal Groups

Division

Groups multiplied by **number in each group** for a **product**

Stefanie has **12** pencils. She wants to share them equally among her **2** friends. How many pencils will each friend receive?

Nicole has **12** pencils. She put them into pencil pockets with **6** pencils each. How many pencil pockets did Nicole use?

$$12 \div 4 = \underline{\quad}$$

Division

If you watch *Stranger Things*:
What's a Partitive story to show
division?

If you watch *Ted Lasso*:
What's a Quotative story to show
division?

Addition Word Problems

Solve the word problems. Show your work.

1. Noah had 12 books. He got 5 more books. How many books did Noah have in all?
2. Bonnie found 8 rocks on her front yard and 7 rocks in her backyard. How many rocks did she find in all?
3. Edward had 5 toy cars. He got 3 more toy cars. How many toy cars did Edward have in all?
4. Mariela collected 11 feathers. She found 3 more feathers. How many feathers did she have in all?
5. LaMonte made 14 cookies. He made 7 more cookies. How many cookies did LaMonte have in all?

Division Word Problems

1. Zookeeper Al had 567 bananas. He gave an equal number of bananas to 9 monkeys in the zoo and 567 bananas. How many bananas did each monkey get? And how many are left over?
2. Betty has 427 oranges. She wants to pack them up equally in 23 boxes. How many oranges will she have in each box and how much does she have left over?
3. Mr. King has 1376 pages of paper. He wants to give 32 pages to each student. How many students can he give paper to? How many extra pages will he have left over?
4. Mr. King has 1376 pages of paper. He wants to give 32 pages to each student. He instead gives 33 pages to each student. Will there be enough paper for all the students? How much more scrap paper does he need?

RIDE

Read the problem.

Identify the relevant information.

Determine the operation and unit for the answer.

Enter the correct numbers and calculate, then check the answer.

RICE

Read and record the problem.

Illustrate your thinking.

Compute.

Explain your thinking.

RIDGES

Read the problem.

I know statement.

Draw a picture.

Goal statement.

Equation development.

Solve the equation.

SUPER

Slowly read the story problem twice.

Underline the question and circle the numbers you need.

Picture it. Draw the scenario to show what is happening.

Explain the problem with a number sentence.

Rewrite the answer in a sentence.

SHINES

Slowly and carefully read the problem.

Highlight or underline key information.

Identify the question by drawing a circle around it.

Now solve the problem. Show your work.

Examine your work for precision, accuracy, and clarity.

Share your answer by writing a sentence.

STAR

Stop and read the problem carefully.

Think about your plan and the strategy you will use.

Act. Follow your plan and solve the problem.

Review your answer.

SOLVE

Study the problem.

Organize the facts.

Line up the plan.

Verify the plan with computation.

Examine the answer.

R-CUBES

Read the problem.

Circle key numbers.

Underline the question.

Box action words.

Evaluate steps.

Solve and check.

UPS✓

UNDERSTAND

Read and explain.

PLAN

How will you solve the problem?

SOLVE

Set up and do the math!

✓CHECK

Difference

Compare

Greater and lesser amounts compared for a difference

Adrianna has 10 pencils. Tracy has 4 pencils. How many more pencils does Adrianna have?

Difference

Adrianna has 6 more pencils than Tracy. If Tracy has 4 pencils, how many does Adrianna have?

Greater amount

Tracy has 6 fewer pencils than Adrianna. Adrianna has 10 pencils. How many pencils does Tracy have?

Lesser amount

Change

Join

An amount that increases or decreases

Nickole had 6 notebooks. Then, she bought 3 notebooks. How many notebooks does Nickole have now?

Nickole had 6 notebooks. Then, she bought a few more notebooks. Now, Nickole has 9 notebooks. How many notebooks did she buy?

Nickole had some notebooks. Then, she bought 3 notebooks. Now, Nickole has 9 notebooks. How many notebooks did she have to start with?

End amount

Equal Groups

Array
Vary

Groups multiplied by **number in each group** for a **product**

Toni has **2** boxes of crayons. There are **12** crayons in each box. How many crayons does Toni have altogether?

Product

Toni has **24** crayons. They want to place them equally into **2** boxes. How many crayons will Toni place in each box?

Number in each group

Toni has **24** crayons. They put them into boxes with **12** crayons each. How many boxes did Toni use?

Groups

Comparison

Set multiplied by a number of times for a product

Brooke ran 6 minutes. Shaleeni ran 4 times longer than Brooke. How many minutes did Shaleeni run?

Schema and Definition	Equations and Graphic Organizers	Examples	Variations
Total (Combine; Part-part-whole) Parts combined for a sum	$P1 + P2 = T$ (part + part = total) 	Sum unknown: Lyle has 11 red apples and 18 green apples. How many apples does Lyle have altogether? Part unknown: Lyle has 29 red and green apples. If 11 of the apples are red, how many green apples does Lyle have?	More than two parts: Lyle has 34 apples. Of the apples, 11 are red, 18 are green, and the rest are yellow. How many yellow apples does Lyle have?
Difference (Compare) Sets compared for a difference	$B - s = D$ (bigger - smaller = difference)  $G - L = D$ (greater - less = difference) 	Difference unknown: Sasha wrote 85 words in her essay, and Tabitha wrote 110 words. How many fewer words did Sasha write than Tabitha? Bigger/greater unknown: Tabitha wrote 25 more words than Sasha. If Sasha wrote 85 words, how many words did Tabitha write? Smaller/lesser unknown: Tabitha wrote 110 words in her essay. Sasha wrote 25 words fewer than Tabitha. How many words did Sasha write?	(None)
Change (Join; Separate) An amount that increases or decreases	$ST +/- C = E$ (start +/- change = end)  	End (increase) unknown: Jorge had \$52. Then, he earned \$16 babysitting. How much money does Jorge have now? Change (increase) unknown: Jorge had \$52. Then, he earned some money babysitting. Now, Jorge has \$68. How much did Jorge earn babysitting? Start (increase) unknown: Jorge has some money, and then he earned \$16 for babysitting. Now, Jorge has \$68. How much money did he have to start with? End (decrease) unknown: Jorge had \$52. Then, he spent \$29 at the ballpark. How much money does Jorge have now? Change (decrease) unknown: Jorge had \$52 but spent some money when he went to the ballpark. Now, Jorge has \$23. How much did Jorge spend at the ballpark? Start (decrease) unknown: Jorge had some money. Then, he spent \$29 at the ballpark and has \$23 left. How much money did Jorge have before going to the ballpark?	Multiple changes: Jorge had \$78. He stopped and bought a pair of shoes for \$42 and then he spent \$12 at the grocery. How much money does Jorge have now?

Schema and Definition	Graphic Organizers	Examples	Variations
<p>Equal Groups (Vary) A number of equal sets or units</p>	<p>$GR \times N = P$</p>	<p>Product unknown: Maria bought 5 cartons of eggs with 12 eggs in each carton. How many eggs did Maria buy?</p> <p>Groups unknown: Maria bought 60 eggs. The eggs were sold in cartons with 12 eggs each. How many cartons of eggs did Maria buy?</p> <p>Number unknown: Maria bought 5 cartons of eggs for a total of 60 eggs. How many eggs were in each carton?</p>	<p>With rate: Maria bought 5 cartons of eggs. Each carton cost \$2.95. How much did Maria spend on eggs?</p>
<p>Comparison One set as a multiple or part of another set</p>	<p>$S \times T = P$</p>	<p>Product unknown: Malik picked 7 flowers. Danica picked 3 times as many flowers. How many flowers did Danica pick?</p> <p>Set unknown: Danica picked 3 times as many flowers as Malik. If Danica picked 21 flowers, how many flowers did Malik pick?</p> <p>Times unknown: Malik picked 7 flowers. Danica picked 21 flowers. How many times more flowers did Danica pick?</p>	<p>With fraction: Malik picked 25 red and yellow flowers. If 1/5 of the flowers were yellow, how many were red?</p>
<p>Ratios/ Proportions (Percentages; Unit Rate) Relationships among quantities</p> <p>Ratio</p>		<p>Subject unknown: Sally typed 56 words in 2 minutes. How many words could Sally type in 7 minutes?</p> <p>Object unknown: Sally typed 56 words in 2 minutes. How many minutes would it take Sally to type 192 words?</p> <p>Base unknown: Justin baked cookies and brownies. The ratio of cookies to brownies was 3:5. If he baked 15 cookies, how many brownies did he bake?</p> <p>Compared unknown: Justin baked cookies and brownies. The ratio of cookies to brownies was 3:5. If he baked 25 brownies, how many cookies did he bake?</p> <p>Ratio unknown: Justin baked 15 cookies and 25 brownies. What's the ratio of cookies to brownies?</p>	<p>With percentage: Watson received an 80% on his science quiz. If the test had 40 questions, how many questions did Watson answer correctly?</p> <p>With unit rate: Paula bought 5 boxes of markers. She spent \$9.75. What is the price of one box of markers?</p>

Teach an attack strategy

Teach about schemas

Word Problems

What are your strengths?

What are your opportunities for growth?

What are your immediate next steps?

Students should learn how to set up and solve word problems by combining an attack strategy with a focus on word-problem schemas.

What are your strengths with word-problem solving?

What are the opportunities for growth?

What's one thing you can start doing next week?

Teachers should use systematic and explicit instruction to help students develop a strong foundation for specific mathematics skills.

Students require modeling and practice on how to use the language of mathematics.

Students should use hands-on tools, virtual manipulatives, drawings, and other visuals to understand mathematics concepts and procedures.

Teachers should use fluency building activities to build counting fluency and fluency with the operations.

Students should learn how to set up and solve word problems by combining an attack strategy with a focus on word-problem schemas.

Intensive Intervention in Mathematics Course Content

NCII, through a collaboration with the University of Connecticut, developed a set of course content focused on developing educators' skills in designing and delivering intensive mathematics instruction. This content is designed to support faculty and professional development providers with instructing pre-service and in-service educators who are developing and/or refining their implementation of intensive mathematics intervention.

Intensive instruction was recently identified as a [high-leverage practice in special education](#), and DBI is a research based approach to delivering intensive instruction across content areas (NCII, 2013). This course provides learners with an opportunity to extend their understanding of intensive instruction through in-depth exposure to DBI in mathematics, complete with exemplars from actual classroom teachers.

NCII, through a collaboration with the University of Connecticut and the [National Center on Leadership in Intensive Intervention](#) and with support from the [CEEDAR Center](#), developed course content focused on enhancing educators' skills in intensive mathematics intervention. The course includes eight modules that can support faculty and professional development providers with instructing pre-service and in-service educators who are learning to implement intensive mathematics intervention through data-based individualization (DBI). The content in this course complements concepts covered in the [Features of Explicit Instruction Course](#) and so we suggest that users complete both courses.

MODULE 5: INTENSIVE MATHEMATICS INTERVENTION: INSTRUCTIONAL STRATEGIES

Sarah R. Powell, Ph.D.

Associate Professor
The University of Texas at Austin
