

## MODEL 7120 SAFETY AND BYPASS VALVE

The purpose of this valve is to safeguard against damage to the steering gear or rudder from hydraulic shocks and over-pressure. This valve also incorporates the function of a bypass valve. This is very useful when bleeding the system or rotating the rudder by hand. The safety and bypass valve is installed near the steering cylinder between the port and starboard lines. The design of the valve allows plumbing directly into lines without the necessity of pipe tees.

|                 |                          |
|-----------------|--------------------------|
| Weight          | 12 lb. (5.4 kg)          |
| Relief Pressure | 2000 psi (138 bar)       |
| Pipe Port Size  | 1 5/16-12 O-ring fitting |
| Flow            | 50 US gpm (189 L/min.)   |
