Math

Students will use the Math in Focus: Singapore Math curriculum which includes manipulatives and interactive software. To build a solid foundation in math, it is crucial for the students to gain a firm understanding of the relationship between numbers and concepts so they can easily manipulate them and make connections. This will be the focus of the teacher because merely memorizing formulas has led to American students being inadequate in math when ranked against peers of their age and grade level globally. However, our students will also have access to supplemental math programs which they will access with their iPads. In doing so, they may continue to progress beyond the concepts being taught in class and sharpen their math skills.
