

Window Shadings

Features

- > Available in light-filtering and room-darkening vane styles to provide varying degrees of light control
- > Filters out up to 88% of incoming harmful UV rays when open, and up to 99% when closed
- > Covers large window expanses with no visible internal lift cords to detract from their elegant appearance
- > When raised, they completely disappear into the headrail allowing more outside view
- > Available with battery-operated Remote lift and tilt motorization (IR and RF) for total operating convenience
- > Limited Lifetime warranty ensures your customers' satisfaction

Vane Fabric Choices and Opacities

Available in four vane fabric styles:

- > Refined – Linen-like translucent vanes in a variety of whites, neutrals, and soft tones
- > Natural – Tone-on-tone slub weave print with a natural fabric appearance on light-filtering vane fabric
- > Easy Living – Sophisticated, subtly-stripped light-filtering vane style
- > Serene – Linen-like vanes with a mylar coating to block out additional incoming light

(Note: Please make sure your customers are aware that Room Darkening vanes do not block out all incoming light).

Decorative Options

- > FABRIC COVERED HEADRAIL

Color-coordinating fabric covers the headrail, providing a seamless look from top to bottom.

control options

- > STANDARD CONTINUOUS CORD LOOP CONTROL

The easy-to-operate continuous cord loop control allows you to open, close, and tilt the vanes as well as lift and lower the shadings for precise light control and privacy.

- > TWO-ON-ONE HEADRAIL

Covers large expanses by placing two shades that operate independently side by side on the same headrail.

- > UNDERSIZE TILT ONLY SHADINGS

Available on window shadings 6" to 11 7/8" in width, ideal for narrow windows such as sidelights.

- > REMOTELIFT MOTORIZATION

Opens, closes, lifts and lowers shadings at the touch of a button. No dangling cords. Two systems available:

Infrared (IR) – value choice that is ideal for operating individual shadings from up to 30 feet away. Requires line of sight positioning.

Radio Frequency (RF) – robust system with enhanced programming that is ideal for independent or grouped operation of multiple shadings. Remote control operates from up to 90 feet away with no line of sight required.

Hardware and Installation

- > Contoured headrail and bottom rail – both are color coordinated to blend in with the shadings.
- > Optional back cover – available to conceal the open rear side of the headrail for a more pleasing exterior look. Use of the back cover adds ¼" to minimum inside mounting depths.
- > Optional dust cover – available to help shield the fabric and internal headrail components from dirt, dust and other contaminants.
- > Snap-in brackets – easy to install and hold shadings securely in place. Quick release front lever allows for fast and easy shade removal.
- > Cord tensioner installation kit – functions as a safety device that makes the lift cord less accessible to children and pets. Must be installed for the cord control to function properly.
- > Spacer blocks, extension brackets, hold-down brackets – also available upon request to provide additional clearance.
- > Magnetic hold-down brackets – provide stability and prevent swaying by securing the bottomrail in place. Often used for French Door applications. Standard with tilt-only shadings.
