

Steam Traps and Condensate Recovery

Process Solutions has the experience and resources to provide you with the best choices for your condensate control.

[Contact us](#) for a free consultation on your steam control practices and equipment

If you use steam, you probably have PROBLEMS with condensate removal. Condensate in steam causes a number of serious problems:

- Loss of live steam through malfunctioning or incorrectly applied traps
- Loss of Heating Capacity in heat exchangers and heaters
- Premature Heat exchanger fouling and leakage (Loss of exchanger efficiency/integrity)
- Hammering and reduced steam flow
- Condensate mists damaging turbine impellers
- Loss of valuable condensate that you could recover and reuse

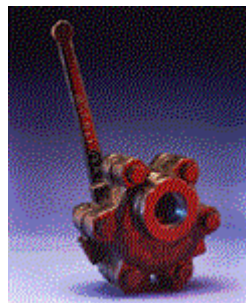

Steam Traps

Mist Separators

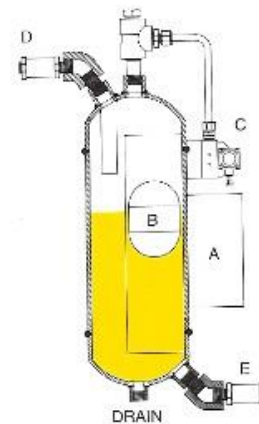

Process Solutions has in-depth experience in selecting and providing steam traps, mist eliminators, sample coolers, condensate pumps, blowdown valves, control valves and level gauges appropriate for your steam system.

Blowdown Valves

Sample Coolers

Condensate Pumps
