

# Fung Tze Kwan

Fung Tze Kwan has been involved in common palm civet research, conservation and outreach since 2010. She graduated with a Master of Science (Biology) from the National University of Singapore studying the diet, home range and seed dispersal role of the common palm civets in Singapore with relevance to forest regeneration via scat analysis, camera trapping, gut passage experiments and GPS -and radio-telemetry. Her research interests are in mammal ecology and conservation, especially in tropical forests. She is also the co-founder of Project LUWAK Singapore, an initiative to raise awareness on the cruelty to civets behind farmed Kopi Luwak. In hope to mitigate human-civet conflicts, Tze Kwan also engages the public through school and public talks, and is an active Toddycats! volunteer with the Lee Kong Chian Natural History Museum. Tze Kwan plans to continue her research on small carnivores and is keen to learn more about, as well as to raise awareness for the small carnivores.
