

Increased Flowering With C20™

Case Study #7:

“Feed the soil microbes that feed your plants”

Photo courtesy, Organic Business Growth, Minneapolis, Minnesota

After four months there are more flowers and the flowers are larger on the plants treated with C20™.

Flowering is significantly enhanced on plants where the soil has been treated with C20™.

The Monarda on the Left was treated with a surface application of C20™ to the soil in the late spring of 2015. The right side was not treated.

The enhancement in flower production continued through 2016 (two growing seasons) from that one application.

C20™ is ideal for treating trees, shrubs, and flowering plants in yards, gardens and landscapes.
