

SAFE SYSTEM ASSESSMENT

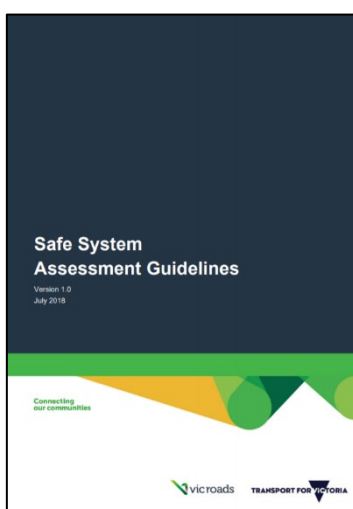

North East Link

Safe System Solutions Pty Ltd has been engaged to undertake an independent Safe System Assessment on the reference design for Victoria's biggest ever road project - North East Link.

Initiating an independent Safe System Assessment ensures the project maximises alignment with Safe System principles, meets the Victorian Government's commitment to undertaking Safe System Assessments for all major road projects and confirms the North East Link Authority's commitment to building a world class road that provides safe travel for all road users.

While Road Safety Audits will play an important role throughout the 10-year design, development and construction of this \$16B project, the Safe System Assessment sets the platform for meeting Victoria's commitment to the Safe System and injects Safe System thinking into the early stages of the project.

Safe System Assessments aren't just for projects of this size, they are proven to improve road safety above and beyond traditional practices for any size project that interacts with the road environment. That's why the Victorian Government has committed to Safe System thinking in all road projects, and independent Safe System Assessments for all road projects over \$5M.
