

Rendezvous Appointment Book

Universal app for iPad and iPhone

Rendezvous has been expressly developed for busy Professional Services Providers to schedule client appointments.

FOR IMMEDIATE RELEASE

April 5, 2016. Rendezvous Appointment Book has been updated. Now a Universal app, Rendezvous delivers an effortless way to make and manage appointments for businesses that serve many clients a day. It's an uncomplicated scheduling app for both the iPad and iPhone.

Rendezvous mimics how appointments are typically scheduled using a traditional week or day planner. It replaces the paper appointment book for specific appointment-driven business segments, from hairstylists, manicurists, fitness and physical trainers, to dance instruction, tutors and music teachers — virtually anyone who provides services by appointment to many daily.

Rendezvous is a back-to-basics app providing a more practical scheduling solution than using one of the fee-based multi-featured appointment apps that are complicated and difficult to use because of an overabundance of features. No bells or whistles with Rendezvous!

Key Features:

- ***Just Two Taps - Fast iPad appointment creation***
Tap and hold anywhere on the day or week calendar, select a time and the Appointment Entry form appears with a list of clients. Tap the client's name, then tap to save - the appointment is set. Plus new clients can be added while making their first appointment.
- ***iCloud Sync***
Syncing to the iPhone through iCloud provides access to all appointments and clients without carrying along the iPad. View, change and add appointments on the iPhone. The iPad will automatically be updated with the additions and changes you made on the iPhone. Likewise, any appointments, changes, and client data done on the iPad will sync back to the iPhone.
- ***Double-Booking***
Rendezvous has a Double-Booking feature. More than one appointment can be scheduled to overlap for those times when multiple clients are being served.
- ***Fast "Floating" Appointment rescheduling***
Tapping on an appointment lifts it off the calendar. Then it can be moved to another time, or move the calendar itself to another day and time. Tap again on the appointment and it is dropped onto the new time.

- ***Client Address Book and Email Service***

Included in Rendezvous is a client "address book" that stores clients' names, phone, email address, and notes. Clients can be imported from Contacts or added manually — either way all historical appointment data and notes are archived and available at any time. Appointment reminders can be directly sent by email from the iPad. Plus, complete client and appointment data is synced between the iPad and iPhone and backed up to iCloud. All data can be exported in CSV format that can be opened in Numbers, Microsoft Excel, a text editor, or a database.

- ***Quick-Start***

Rendezvous was also designed to get the user up and running in as few minutes as possible. No need to register, straightforward setup settings, visual Help Hints available with one tap, as well as an extensive "Mega-help" User Guide with tutorials. Visual simplicity makes it easy to manage appointments from 5 calendar views.

Pricing & Download

Rendezvous Appointment Book for iPad and iPhone is available for download in the App Store for \$9.99 and requires iOS 9.0 or later.
