

# PRODUCT GUIDE

NATIONAL GOLD  
CONSULTANTS

## Non-Qualified Gold & Silver Purchases

When investing your non-qualified funds into gold and silver, we use American minted pre-1933 general circulated coins. These provide three advantages over other gold and silver products:

### Privacy

These coins are classified as semi-numismatic and are a private asset class, similar to cash. No state or federal reporting is required when you buy or sell. This protects your privacy.

### Performance

The supply of pre-1933 coins is limited. As demand for precious metals rises, this limited supply creates the opportunity for these metals to out-perform newly minted coins.

### Liquidity

National Gold Consultants gladly offers our clients fair market value when you choose to sell. These gold and silver coins are some of the most liquid coins available to investors.

## Wholesale Not Retail

The value is in the volume at National Gold Consultants. We provide dealer direct pricing by not sorting coins based on condition, type or mint marks. You may receive coins that appear uncirculated and coins that are worn down or dirty, but you will not receive coins that have holes or appear so worn that the images are illegible. No matter the condition, pre-1933 coins provide you privacy, performance and liquidity.

## Types of Pre-1933 Coins

**Gold** - We use two different types of gold coins. These coins were struck with face values of \$5 and \$10 reflecting the amount of gold in each coin. Based on prevailing market conditions, National Gold Consultants will fill your order with whichever provides you the best value.

- ▶ The "**Liberty**" gold coin was minted by the U.S. government from 1839-1908. Designed by engraver Christian Gobrecht, it was inspired by the portrait of Venus in Benjamin West's painting "Omnia Vincit Amor."
- ▶ The "**Indian**" gold coin was minted from 1908-1929. Designed by artist Bela Lyon Pratt, a Boston sculptor, it is notable for being the first U.S. coin to depict a Native American and for its distinct recessed design.

**Silver** - We use two different types of silver coins. Both coins were struck with a face value of \$1.

- ▶ The "**Morgan**" dollar was minted from 1878-1904, and again in 1921. It is named after its designer, engraver George Morgan. The profile was modeled by Anna Willes Williams, whose identity was to be kept secret.
- ▶ The "**Peace**" dollar was minted from 1921-1928. Designed by Anthony de Francisci, a sculptor and novice coin designer, it symbolized peace after World War I. The face is modeled after De Francisci's wife, Mary Teresa.

### \$5 Gold Liberty & Indian Coins

### \$1 Silver Morgan & Peace Coins

### \$10 Gold Liberty & Indian Coins

## Qualified Gold & Silver Purchases

When investing your qualified funds into gold and silver, we use Canadian minted Maple Leaf coins. These provide three advantages over other gold and silver products:

### Purity

Certified by the Canadian mint with a purity of 9999 these coins are one of the purest bullion coins on the planet. Renowned for their excellence, each coin contains 1oz of 9999 pure gold or silver.

### Performance

The reputation and purity of the Canadian Maple Leaf makes these among the most sought-after coins in the world. Their popularity, and the fact that these coins are legal tender, creates the opportunity for these metals to perform well in various market conditions.

### Liquidity

National Gold Consultants gladly offers our clients fair market value when you choose to sell. As the official bullion gold and silver coins of Canada, they are some of the most liquid coins available to investors.

## Understanding Qualified Accounts

Qualified investment accounts are specific account types that provide tax advantages or benefits to encourage retirement savings. Examples include Individual Retirement Accounts (IRAs), 401(k) plans, and 403(b)s. Prior to the Employee Retirement Income Security Act (ERISA) of 1974, pensions were the primary retirement accounts for most Americans.

Qualified accounts have gained popularity since then, but they are subject to numerous rules and regulations. The IRS restricts the types of gold and silver allowed to be held. In addition, they require the metals be held by a custodian in an account under your name.

## Types of Canadian Maple Leaf Coins

**GOLD** – We use 1oz Canadian Gold Maple Leaf 9999 gold coins. These coins have a face value of \$50 Canadian.

- ▶ Introduced in 1979, these were the first widely available gold coins. In 2014 security features were added to the coins: a laser-micro-engraved textured maple leaf on each coin and radial lines that reflect light in a unique way.
- ▶ The portrait of Queen Elizabeth II was updated three times, portraying her at age 39, 64 and 77.
- ▶ The Gold Maple Leaf was the first bullion coin to achieve 9999 purity.

**SILVER** – We use 1oz Canadian Silver Maple Leaf 9999 silver coins. These coins have a face value of \$5 Canadian.

- ▶ Introduced in 1988, the Royal Canadian Mint was the first major global mint to release a silver bullion coin.
- ▶ Except for the security features, the Silver Maple Leaf coin's front design has remained unchanged since 1988.
- ▶ In 2024 the profile on the reverse changed from Queen Elizabeth II to King Charles III.

# \$50 Gold Maple Leaf Coin

# \$5 Silver Maple Leaf Coin

## Elizabeth II (1979 - 1989)

Depicted at age 39.
