

## Hologram

### Total Release Tamper Evident Holographic Label

The Total Release Tamper Evident Holographic Label starts out life as a standard Hologram Label with a few enhancements. When you attempt to remove the label from the object that is adhered to the Clear PET carrier (Thermal transfer PET clear epoxy resin) will completely release from the label leaving the extremely fragile exposed metallization. The Total Release function is achieved when there is an extremely weak adhesive layer that bonds the metallization to the PET carrier. When there is an attempt to remove the label the entire PET layer will separate intact from the metallization. The metallization is extremely thin and fragile and will break apart if any attempt is made to remove it.
