

# Sand Etched Process

The Sand Etched process creates a one-piece sustainable sign that is durable under a variety of high-traffic conditions. Manufactured from sturdy MP phenolic material, these signs offer a long-lasting option for all types of facilities. The etching process produces sign with integral characters & braille which is highly resistant to vandalism.

Sand Etched signs are Green Guard certified & can satisfy architects that are looking for a solution for their LEED requirements. Sand Etched signs are also Class "A" Fire Rated as a self-extinguishing product. These features make Sand Etched a perfect answer to a variety of needs & applications.
