--

The MS Caster is best option if you have Win10 laptops (and you do NOT need to also cast from iPads)

The Kramer VIA-GO is the best option if you want to cask from PC & MAC plus ALL mobile (IOS/Android) devices.

The 'Barco ClickShare CSE-200' we released in Q1-2016 when many computers did not support 'native' wireless casting – now (2018/2019) more than 95% of computers and mobile devices can cast 'natively', eliminating the need to have a 'casting dongle' such as the 'sending units' that you get with the 'CSE-200' pack.

While we are not saying that the 'CSE-200' is 'useless', we are saying that in 2018/2019 there is a very limited amount of applications that the 'CSE-200' would be better than either of the other 2x options detailed above…

NOTE: Some 'rented event spaces' still use the 'CSE-200' if they have 'random' clients renting the space that may have old Win7 laptops (that do not support native casting)…

--

NOTE: When using the 'MS Caster' you can also install 'Reflector' ($15-USD Cost) – to allow you to cast from any IOS device to the PC, and, it will then cast to the 'MS Caster' – link;

PAGE-3: Why you may want a 'pro business' system like 'Barco ClickShare CSE-200' or 'Kramer VIA-GO + VIA PADs'…

Many TV screens now have 'Google Chrome' content sharing 'end point' built in (or, a Google Chromecast unit may cost under $50 if not) – and, this is a 'FREE' way to cast from your PC to your display system – see demo;

https://www.youtube.com/watch?v=wXaJwZnUswQ

However, when considering how your company has set-up it's network security, many 'casting solutions' are not 'practical' for 'visitors' that may need to cast to your display for a presentation, meeting or a training provider…

Systems that do NOT require the PC to be on the network include the 'MS Caster' on page-2.

For the 'Barco ClickShare CSE-200' & 'Kramer VIA-GO + VIA PADs' systems, the 'work around' that has been developed is the '***paired USB – Click Devices***' that any user can plug in to any PC/MAC (Win7+/OSX) and, this 'Click-Device' is connected to the local network, and via 'driver free – plug-n-play' systems, this will allow an external PC/MAC to connect securely to the wireless display (with no need to join the network or have any settings adjusted to do so)

--

AVK Can offer a pack of 2x 'Kramer VIA-PAD' USB 'Click-Devices' for $260+gst ($130each) with any Kramer VIA-GO Purchase;
